
Additional License Authorizations

For ITOM Platform Products

Additional License Authorizations

For ITOM Platform Products

This Additional License Authorizations document (“ALA”) set forth the applicable License Options and additional specific software license terms that govern the authorized use of the software products specified below, and are part of the applicable agreement (i.e., Micro Focus End User License Agreement; and/or any separate agreement that grants Licensee a license to such products (e.g., Customer Portfolio Terms or other Master Agreement; and/or Quotation) (the “Applicable Agreement”). Capitalized terms used but not defined herein shall have the meanings set forth in the Applicable Agreement.

Products covered

Products	E-LTU or E-Media available *	Non-production software class **	Term License Non-production software class (if available)
Operations Orchestration	Yes	Class 1	Class 1
Robotic Process Automation	Yes	Class 1	Class 1
Universal CMDB	Yes	Class 1	Class 1
Universal CMDB Configuration Manager Advanced Configuration Manager	Yes	Class 1	Class 1
Universal CMDB Third Party Integration	Yes	Class 1	Class 1
Universal Discovery	Yes	Class 1	Class 1
Universal Discovery Inventory	Yes	Class 1	Class 1
Universal Discovery for Oracle License Management	Yes	Class 1	Class 1
Discovery and Dependency Mapping Inventory	Yes	Class 1	Class 3

* Any product sold as E-LTU or E-Media shall be delivered electronically regardless of any contrary designation in a purchase order.

** Additional licenses solely for non-production use, may be available as specified in the Non-Production Licensing Guide found at software.microfocus.com/legal/software-licensing depending on the non-production software class specified above. Any such non-production licenses will be subject to the Non-Production Licensing Guide and the applicable License Option terms and conditions set forth in this ALA.

Definitions

Term	Definition
Agent	Means that portion of the software that manages and is required for each Server (physical, virtual, cloud or Container).
Bot	Means a robotic software entity that performs work.
Bot Hour	Means a unit of measurement used to track how long it takes a robot to execute a task.
Client	Means any application or systems which provide functionality separate from that of the Software while providing for the facility to connect to and interact with the Software.
Concurrent Bot	Means the amount of bots that simultaneously perform work at any one point in time.
Concurrent Workflow	Means the amount of Workflows that run in parallel at any one point in time.
Container	Means the running software instance that emulates an active OS Instance or wraps an application under control of a technology including but not limited to Docker.
Core Server	Means the Server side component of software which is typically complemented by an Agent component.
Database	Means application data including table structure, stored procedures, and other functionality that runs on a Database Instance.

Additional License Authorizations

For ITOM Platform Products

Term	Definition
Database Instance	<p>Means a software application that has the sole purpose of acting as a container that hosts and executes one or more Databases</p> <ul style="list-style-type: none">For Microsoft SQL Server, Database Instance is one SQL Server Service with its own port, logins and set of system and user Databases.For an Oracle database, Database Instance is one SID (Oracle system ID) in a database environment, including the RDBMS software, table structure, stored procedures and other functionality. For Oracle RAC, each Instance referencing a database environment is a Database Instance.For DB2 databases, Database Instance is one DB2 Database Instance as identified by a DB2 Instance with its User, TCP/IP service port on a given system. <p>For Sybase and Informix Server, Database Instance is one Server (SAP Sybase Adaptive Server) with its own login, Dataserver port and set of system and user Databases.</p>
Device	<p>Means an addressable entity, physical or virtual, cloud or Container including but not limited to router, switch, bridge, hub, server, PC, laptop, handheld device or printer that resides within the range defined for interrogation and asset tracking.</p>
DDMI Device	<p>Means an addressable entity, physical or virtual, including but not limited to router, switch, bridge, hub, server, PC, laptops, handheld device or printer that resides within the range defined for interrogation and asset tracking.</p>
E-LTU and E-Media	<p>Means products which are electronically delivered only, and as such any reference to FOB Destination or delivery methods that are stated on your purchase order other than electronic shall be null and void with respect to these E-LTU or E-Media products.</p>
Express Discovery	<p>Means discovery that provides a subset of Premium Discovery, including features such as Device and software inventory via Agent or agentless technologies, software library management via SAI, covering Devices such as Servers, Workstations, network and storage equipment. Does not includes capabilities to discover dependencies between Devices, or between Devices and applications and services.</p>
Implementation	<p>Means an installation of the software on a single Server or installed on a cluster of Servers which work together as a single installation of the software.</p>
Instance	<p>Means each Implementation of the application installed on a Server.</p>
Managed Data Repository or MDR	<p>Means a repository of data that can be a third party product or custom built and provides data about managed resources (for example, computer systems, application software, and buildings), process artifacts (for example, incident records and request for change forms), and the relationships between them.</p>
Mobile Device	<p>Means a portable computing device such as a smartphone or tablet computer designed for individual usage.</p>
Network Device	<p>Means a subset of devices that are responsible for network capabilities, representing addressable entity, physical, virtual or cloud, including but not limited to router, switch, bridge, hubs and other infrastructure that is represented in UCMDB and OO under the "Net Device" category that resides within the range defined for interrogation and asset tracking (with the exception of Storage Devices).</p>
Node	<p>Means any infrastructure component, physical or virtual (server, network, storage, desktop, low end Device) that derives value from Operations Orchestration.</p>
Operating System Instance or OS Instance	<p>Means each Implementation of the bootable program that can be installed onto a physical system or a partition, such as system Virtual Machines, virtual environments, virtual private servers, Containers, guests (a Virtual Machine system running on a host system where the host runs its own complete OS Instance (as opposed to a hypervisor) and zones (specific nomenclature for a software partition which can run a virtual OS instance including but not limited to native and ipkg) within the physical system. A physical system can contain multiple Operating System Instances.</p>
Premium Discovery	<p>Means discovery via Agent or agentless the configuration of Devices including Workstations, Servers, Network Devices, Storage Devices and software that is installed on them. Capabilities to discover and map the inter dependencies between Devices, and the dependencies between services and Devices, and the data required for the Oracle License Management reports.</p>
SAP Instance	<p>Means a standalone SAP basis unit which provides services used by clients connected to the SAP system. Among these services are the message server and the enqueue server, which run only on the single SAP Central Instance.</p>

Additional License Authorizations
For ITOM Platform Products

Term	Definition
Server	Means a computer system or computer system partition for which a bootable program is installed. Workstation or Mobile Devices are not considered to be a Server.
Storage Device	Means a subset of devices that are responsible for shared storage capabilities, representing addressable entity, physical, virtual, or cloud, including but not limited to storage arrays, network accessible storage (NAS) and other infrastructure that is represented in UCMDB and OO under the "Net Device" subcategory "Storage Arrays".
Suite	Means two or more software products combined into a single license offering or a single software product which includes two or more licenses. The specific software products included in a Suite are specified in the software specific license terms below. Software products included in a Suite are governed by the individual authorizations and use restrictions associated with each software product, except where specified in the specific Suite software specific license terms below.
Task	Means a step in a Workflow, either an API driven step or a UI driven step.
Unit	Means a rationalized unit of licensing that provides entitlement to multiple metrics in a pre-defined ratio. This licensing Unit enables a customer to purchase entitlement as Units and apply it to any of the underlying metrics defined by the Unit. See software specific license terms for the definition of Unit for products and suites that are licensed by Unit.
Unlimited	Means without restrictions in terms of number of systems, Devices or media, depending on the context.
Use	Means to install, store, load, execute and display one copy of the software.
User	Means a user whose Use is restricted to the type of software that is being licensed.
Virtual Machine(s)	Means a computer that does not physically exist but is simulated by another computer.
Workflow	Means one or more tasks designed to run in sequence.
Workstation	Means a subset of compute devices that run operating systems that are designed for individual usage and not for shared infrastructure use. Examples of workstations are laptops, desktops and other compute devices that run operating systems including (but not limited to) Windows 8, Windows 10, and MacOS.

License Options

The following License Options are the types of licenses available for a given software product as further specified in this ALA. The applicable License Option for a license shall be as set forth in the Applicable Agreement or Product Order. Those products with only one License Option available shall be governed by such License Option whether or not stated in the Applicable Agreement or Product Order unless otherwise agreed in writing between Licensee and Licensor.

Bot Hour License

Licensed Software provided under this License Option gives Licensee the right to purchase batches of 200 Bot Hours that cannot be split up into smaller increments. If Bot Hour License is active and assigned to a Workflow, when that Workflow finishes, the amount of time used is recorded and deducted from the pre-purchased Bot Hours. Time is tracked in seconds and recorded in hours or portions of hours. Any number of Bot Hour licensed Workflows or actions can run in parallel. When using Bot Hour license, a license is available as long as the purchased Bot Hours have not been exhausted. The number of Bot Hours activated is governed by one or more entered license keys.

Concurrent Bot License

Licensed Software provided under this License Option gives Licensee the right to Use the Licensed Software on multiple Devices and simultaneously use the Licensed Software at any one point in time provided that the number of Bots performing work simultaneously at any point in time must be equal to or less than the number of licenses purchased. Any Bot doing work driven by a designed Workflow, will consume a Concurrent Bot license. One Concurrent Bot includes up to twenty (20) parallel threads for non-UI robotic tasks. The number of Concurrent Bot licenses activated is governed by one or more entered license keys.

Concurrent Workflow License

Licensed Software provided under this License Option gives Licensee the right to Use the Licensed Software on multiple Devices and simultaneously use the Licensed Software for a Workflow execution. The number of running Workflows at any point in time must be equal to or less than the number of licenses purchased. One Concurrent Workflow includes up to twenty (20) parallel threads. The number of Concurrent Workflow licenses activated is governed by one or more entered license keys.

Operation Orchestration Unit License

Operation Orchestration Unit includes:

- 1 Server or Storage Device Node, or
- 2 Virtual Machine/Containers Nodes
- 2 Network Device Nodes, or
- 8 edge Device Nodes

The license includes the Core Server, central Server, remote access Server, self-service portal, workflow designer, desktop studio, entire standard content library, all 3rd party integration components and Unlimited users and administrators/authors.

Software Specific Terms

Operations Orchestration

The following License Options apply: Operations Orchestration Unit License or Concurrent Workflow License.

- For Operations Orchestration Server and Storage Node the Node represents OS Instances on a physical Device or a Virtual Machine, or a physical Device hosting multiple Virtual Machines where there are multiple OS Instances, or storage arrays.
- For Operations Orchestration Network Node the Node represents network Devices such as a switch, a router or a hub.
- For Operations Orchestration edge Device Node the Node represents end user Devices such as: Clients, laptops/desktops, handhelds, smart Devices, and SOHO Devices such as low cost Wi-Fi routers, switches, cable boxes.
- For Operations Orchestration Virtual Machine 10 Node each Node represents a Virtual Machine.

Operations Orchestration Platform is only licensed to customers who purchased Operations Orchestration Platform prior to September 1, 2011. Operation Orchestration Platform license includes the Core Server, central Server, remote access Server, entire standard content library and all 3rd party integration components. Operations Orchestration Platform allows software architecture independent of the number of Core Servers and can be installed on any number of computers, provided that the actual usage of the software does not exceed the number of licenses purchased as per the Device tier package.

Operations Orchestration Platform for Integration Only is only licensed to customers who purchased Operations Orchestration Platform for Integration Only prior to September 1, 2011. Operations Orchestration Platform for Integration Only license is restricted to integration of Server Automation or Network Automation with ticketing or monitoring systems, and may not be used for alert/incident resolution automation or other broader Run Book Automation use cases.

An Operations Orchestration license is not required where Operations Orchestration is used to provide integration to a Micro Focus domain manager. A license is required where an Operations Orchestration flow is orchestrating entities behind a Micro Focus domain manager such as Server Automation, at a 10:1 ratio licensing calculations for Operations Orchestration. For example, if there are 1,000 servers being managed by Server Automation through an orchestrated flow, then a 100 Operations Orchestration Units license would be required.

Additional License Authorizations

For ITOM Platform Products

For Operations Orchestration integration with non-Micro Focus domain managers, like BMC Remedy or IBM Tivoli Provision Manager, a license for each non-Micro Focus domain manager, in addition to a 10:1 ratio for the entities behind the non-Micro Focus domain managers, is required. For example, if there are 1,000 servers being managed by IBM Tivoli Provisioning Manager through an orchestrated flow, then one Unit license would be required for the domain manager license and 100 Units license for the devices behind the domain manager.

Operations Orchestration Suite Add-On provides full Operations Orchestration capability to customers who license a Micro Focus Suite with restricted Operations Orchestration functionality. The Suite Add-On requires active support for a Suite with restricted Operations Orchestration functionality. The quantity of Add-On Units must match Operations Orchestration quantity in the original Suite licensed.

Operations Orchestration Content for SAP Process Automation Operations Orchestration Content for SAP Process Automation is licensed per 5 SAP Instances.

Robotic Process Automation (RPA)

The following License Options apply: Concurrent Bot License and Bot Hour License.

Both Concurrent Bot License and Bot Hour License may be active on the Server, enabling Concurrent Bot and Bot Hours to be used on different Workflows simultaneously. The Server can be configured so that if a Concurrent Bot License is not available, a Bot Hour License can be used automatically. One Concurrent Bot License must be active on the Server to utilize Bot Hour License. The number of Bot Hours activated is governed by one or more entered license keys.

Universal CMDB (UCMDB)

Universal CMDB provides a foundational capability for Universal Discovery and other Micro Focus products and suites. Universal CMDB foundation is a free entitlement with the purchase of Universal Discovery, Universal Discovery Inventory, or Universal CMDB Third Party Integration. A minimum purchase of 100 Units or OS Instances, or 200 MDR, is required for this free entitlement. Universal CMDB is also entitled as part of the purchase of several other products and suites. Please refer to specific products or suites for more information.

Universal CMDB Configuration Manager Advanced Configuration Manager

Universal CMDB Configuration Manager Advanced Configuration Manager is licensed per OS Instance.

A minimum purchase of 100 Units or OS Instances is required. When you purchase Advanced Configuration Manager (available for Universal CMDB 10.00), you are entitled to the following advanced functionality: environment segmentation analysis, similarity policies, topology policies, and pre-defined out-of-the-box policies. To leverage this functionality, licensee should license Advanced Configuration Manager for the number of OS Instances in Universal CMDB.

Universal CMDB Third Party Integration

Universal CMDB Third Party Integration is licensed by Managed Data Repository (MDR) (available for Universal CMDB 10.00 and higher). You are entitled to integrate with these third party data repositories via data population, push, federation, or Application Program Interface (API) mechanisms.

Universal CMDB 10.00 and higher requires all data exchanges between a MDR and UCMDB to be covered by a Universal CMDB Third Party Integration license. Data exchanges in that context include both inbound data flows (persistent or transient copy of third party data into UCMDB via a push, a pull, or a federation) and outbound data flows (any extraction of data from UCMDB); and they encompass all integration techniques (generic adapters, custom adapters, and programmatic interaction via the UCMDB SDK). Pending technical limitations, there is no limit to the nature and the direction of the data flows, the number of CIs and the type of CI's that can be exchanged between Universal CMDB and a licensed MDR.

Additional License Authorizations

For ITOM Platform Products

Universal Discovery

Universal Discovery 11.X is licensed by Units, where 1 Unit can be consumed based on the following ratios:

- Premium Discovery of a server OS Instance consumes 1 Unit
- Express Discovery of a server OS Instance consumes 0.1 Units
- Express Discovery of a Workstation OS Instance or a Container consumes 0.1 Units
- Express Discovery of Network Devices or Storage Devices does not consume Units

Universal Discovery 10.X is licensed by OS Instance.

Universal Discovery Inventory 10.X is licensed per block of 100 OS Instances.

Universal Discovery for Oracle License Management is licensed by Implementation for Universal Discovery 10.x and is included with Universal Discovery 11.x when a Server is discovered with Premium Discovery. UCMBD Discovery 10.x Licenses are entitled to install Universal Discovery for Oracle License Management on a single Instance of Universal Discovery.

Discovery and Dependency Mapping Inventory

The software shall be restricted to monitoring/discovering the number of DDMI Devices for the licenses purchased.

Additional license terms

Term	
A.	Software contains software and associated specifications licensed from third parties that are confidential to, and trade secrets of, such parties. You will not take any action other than to Use it as authorized under the agreement as part of the software products and will not disclose it to third parties.
B.	You shall install and use the software as authorized in the applicable agreement only as a complete product and may not use portions of such software on a standalone basis separate from the complete software unless expressly authorized in the Supporting Material, specifications or an applicable agreement.
C.	To the extent this restriction is not prohibited under applicable law, you shall not disclose to any third party the results of (i) any performance benchmarks you run on software products themselves, or any portion thereof, or (ii) specific detailed comparisons you make between software products, or any portion thereof, and any of your or third-party product, in each case under (i) and (ii) without the prior written consent of Micro Focus.
D.	RPA can potentially be used to record user actions and/or network communications including the entering, retrieving and storing of potentially sensitive information. You understand and agree to assume all associated risks with such activities and hold Micro Focus harmless for the same. It remains at all times the Customer's sole responsibility to assess its own regulatory and business requirements regarding access or retention of such information.
E.	One or more activated concurrent licenses must be present to operate the software.
