Notes:

- ¹ Windows 2000 Server or Advanced Server
- ² The Exchange SPI B.09.00 does not store metric data into OVPA. However, it can coexist with OVPA 4.5/4.6, but Exchange data has to be stored in the Embedded Performance Component of the OVO agent.
- ³ No installer for graph templates. Templates have to be copied manually to OVPM on another machine. If OVPM is installed on OVOW mangement server, then templates are available automatically.
- ⁴ NT 4.0 Service Pack 5 required for Y2K compliance
- ⁵ Optional additional 20MB for MeasureWare DSI log
- ⁶ Predefined reports for Reporter
- ⁷ part of SPI CD - will be automatically selected for installation
- ⁸ I18N support implies that the English version of the Software can be installed and used under non-English language systems. Exchange SPI I18N support is limited to the Japanese version only. All other non-English locales are currently not supported.
- ⁹ This is supported only on OV Operations 7.17 onwards
- ¹⁰ footnote deleted
- ¹¹ The latest agent patches (OVO Agent A.07.25 or higher) must be installed.
- ¹² Windows 2000 mainstream support retired by Microsoft on 30-Jun-2005, Windows 2000 SP4 still supported if MS extended support contract is available (MS support ends 7/13/2010). SPI support will end when Operations Agent ends support for Windows 2000.
