<sup>1</sup>118N support implies that the English version of the Software can be installed and used under non-English language systems. This SPI depends on Crystal Reports, and Crystal reports do not allow you to generate a single set of report templates that can be used on all non-English languages. Hence, the report templates that must display non-ASCII characters may corrupt the non-ASCII characters.

<sup>2</sup>Reporter 3.5 requires Crystal Reports 8.5 (won't work with 8)

<sup>3</sup>Remote monitoring of unsupported platforms requires the availability of IBM's PMI on the remote system.

<sup>4</sup>Without Discovery

<sup>5</sup>Work around is required for OVO Windows with patch OVOW\_00087 on nodes Tru64 5.1B, Redhat Linux 2.1, 3.0, Itanium 11.23. See documentation for more details on NSMbb63634.

<sup>6</sup>Last release this version will be supported

<sup>7</sup> Reporter Patch for Reporter 3.5 is required (OVR\_00008) for the Korean and S-Chinese customers otherwise the reports will not generate correctly. The SPI patches for OVOW will be a patch to Reporter-Lite for OVOW (Reporter 3.43)

<sup>8</sup> Supported with B.02.09.01, available on ftp site only

<sup>9</sup> WebSphere Network Deployer is not supported.

<sup>10</sup> msi files for OV Reporter 3.6 are located at <ftp://ftp.hp.com/pub/ovreporter>

<sup>11</sup> MC/SG supported for hardware failover on HPUX managed node cluster (each managed node should be HPUX)

<sup>12</sup> Install OVOW server patch OVOW\_00244 for this SPI version to run on OVOW 7.5

<sup>13</sup> Upgrade WebSphere SDK to Service Pack 4, for complete support of SPI functionality

<sup>14</sup> Support for 64-bit Windows nodes is only available via 32-bit DCE emulation mode
