Support

You can visit the HP Software support web site at:

www.hp.com/go/hpsoftwaresupport

This Web site provides contact information and details about the products, services, and support that HP Software offers.

HP Software online software support provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the support site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Download software patches
- Manage support contracts
- Look up HP support contacts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

Most of the support areas require that you register as an HP Passport user and sign in. Many also require a support contract.

To find more information about access levels, go to:

http://h20230.www2.hp.com/new_access_levels.jsp

To register for an HP Passport ID, go to:

<http://h20229.www2.hp.com/passport-registration.html>

Documentation Updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
 - The number before the period identifies the major release number.
 - The first number after the period identifies the minor release number.
 - The second number after the period represents the minor-minor release number.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition, visit the following URL:

<http://h20230.www2.hp.com/selfsolve/manuals>

This site requires that you register for an HP Passport and sign-in. To register for an HP Passport ID, go to:

<http://h20229.www2.hp.com/passport-registration.html>

Or click the New users - please register link on the HP Passport login page.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your HP sales representative for details.

Table 1 indicates changes made to this document since the last released edition.

Table 1 Document Changes

Chapter	Version	Changes
1	5.11	Page 6, Added information about specifying the <code>opeurl</code> parameter in the <code>console.properties</code> file after an upgrade when SSL communication is used.

 - Special Instructions for SSL Communication6

1 Upgrading the CM Enterprise Manager

CM Enterprise Manager Upgrade Instructions

Pre-requisites

The CM Enterprise Manager requires that you first install the latest CM Portal before upgrading. Refer to the *CM Portal Guide* and the *CM Portal Migration Guide* for details.

Upgrade Instructions

To upgrade the CM Enterprise Manager:

- Install the new CM Enterprise Manager using the executable provided in the Enterprise Manager directory on the latest Configuration Management media.

The existing CM Enterprise Manager is updated during the new installation. You do not need to remove any existing files beforehand. Also, you do not need to restart the CM Enterprise Manager service after the installation is complete.

See the *Installing the CM Enterprise Manager* chapter in the *CM Enterprise Manager User Guide* for detailed information about how to use the installation.

Special Instructions for SSL Communication

If you have disabled the non-SSL HTTP port 8080 connector in the `server.xml` file according to the “Disabling Non-SSL Access” procedure in the *HP CM SSL Implementation Guide*, you must ensure that the following things are true:

- The `console.properties` file specifies the `opeurl` setting.
- The `opeurl` setting points to the port used for SSL communication with the CM Enterprise Manager.

To specify the correct port and protocol for SSL communication after the upgrade:

- 1 In the `EMInstallDir\CM-EC\tomcat\webapps\em\WEB-INF\console.properties` file, find the following line (if present):

```
opeurl=http://localhost:8080/ope/resources
```

If this line is not present in the file, add it using the parameters specified in step **Error! Reference source not found.**

- 2 Change the protocol from `http` to `https` and the port from 8080 to the SSL port configured in the `server.xml`. For example if the default port is configured as 8443 then the configuration would look like:

```
opeurl=https://localhost:8443/ope/resources
```

- 3 Save the file.

Chapter 1

- 4 Restart the HP CM Enterprise Manager service.
