Supported Back-End Systems	AssetCenter 4.0
Application Servers	IBM WebSphere 4.0.1
Web Servers	Microsoft IIS 4.0 (with Windows NT 4.0) Microsoft IIS 5.0 (with Windows 2000) Apache Server 1.3.20
Java Run-Time Environment	JDK 1.3.1 if using Tomcat as your app server JRE 1.3.1
Hard Drive Space	Minimum 150 MB
RAM	512 MB
Languages	English

Studio

The following table lists the known issues and temporary solutions for Peregrine Studio.

Issue	Temporary Solution
On the Tools menu, select Options > Advanced. In the Advanced dialog box, all options can be selected.	Do not activate any Advanced options except “Use HTTP Listener.” The HTTP Listener must be selected if you have set “Display Form Info” to <i>true</i> to access Peregrine Studio from Peregrine OAA forms. If you use the other advanced options to edit source packages or the tools library, you may not be able to install future Peregrine OAA patches or upgrades. Any modifications made using Advanced Options will invalidate your Support agreement with Peregrine.
When adding a template to a form, the template is not added properly if you use a drag-and-drop method or copy and paste the template.	To add a template to a form, right-click on the form. Select New , and then the template you want from the menu.
When trying to edit a label for a fieldtableheading or fieldtable row component, there is no label field displayed in the tab view.	Select the fieldtable component in the Project Explorer. This will display the fieldtable on the right side of the Studio window. Select the Columns tab. The label can be edited in the label area.

Issue	Temporary Solution
When you first open your Web application project in Peregrine Studio, a conflict icon (red exclamation point) is displayed next to the Project node.	No conflict resolution is required. You can ignore this icon.
Web application project compiles with errors.	Before attempting to build the Web application project in Peregrine Studio for the first time, do the following: <ol style="list-style-type: none">1. Open the Web application project.2. From the Build menu, select Project settings.3. On the Build Options tab, locate the Builder activation section.4. Clear the Entity Documentation files and Connect.It DSD files options.5. Click OK.6. Rebuild your Web application project.

Need Further Assistance?

For further information and assistance with the Get-Resources 2.5 Tailoring Kit, refer to the Peregrine Customer Support. web site at:

<http://support.peregrine.com/>
