

# HP Operations Smart Plug-in for BEA WebLogic Server

for HP Operations Manager for UNIX®

Software Version: 6.00

---

## Reference Guide

Document Release Date: February 2009  
Software Release Date: October 2008

## Legal Notices

### Warranty

The only warranties for HP products and services are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. HP shall not be liable for technical or editorial errors or omissions contained herein.

The information contained herein is subject to change without notice.

### Restricted Rights Legend

Confidential computer software. Valid license from HP required for possession, use or copying. Consistent with FAR 12.211 and 12.212, Commercial Computer Software, Computer Software Documentation, and Technical Data for Commercial Items are licensed to the U.S. Government under vendor's standard commercial license.

### Copyright Notices

© Copyright 2002-2006, 2009 Hewlett-Packard Development Company, L.P.

### Trademark Notices

UNIX® is a registered trademark of The Open Group.

Windows® is a US registered trademark of Microsoft Corporation.

Java™ is a US trademark of Sun Microsystems, Inc.

For information about third-party license agreements, see the %ovinstalldir%/license-agreements/SPI directory on the product installation CD-ROM.

## Documentation Updates

This guide's title page contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates, or to verify that you are using the most recent edition of a document, go to:

**<http://h20230.www2.hp.com/selfsolve/manuals>**

This site requires that you register for an HP Passport and sign-in. To register for an HP Passport ID, go to:

**<http://h20229.www2.hp.com/passport-registration.html>**

Or click the **New users - please register** link on the HP Passport login page.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your HP sales representative for details.

## Support

You can visit the HP Software Support Online web site at:

**<http://www.hp.com/go/hpsoftwaresupport>**

This web site provides contact information and details about the products, services, and support that HP Software offers.

HP Software Support Online provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the HP Software Support web site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Download software patches
- Manage support contracts
- Look up HP support contacts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

Most of the support areas require that you register as an HP Passport user and sign in. Many also require a support contract.

To find more information about access levels, go to:

**[http://h20230.www2.hp.com/new\\_access\\_levels.jsp](http://h20230.www2.hp.com/new_access_levels.jsp)**

To register for an HP Passport ID, go to:

**<http://h20229.www2.hp.com/passport-registration.html>**

# 1 WebLogic Server Metrics

This chapter provides detailed and summary listings of the HP Operations Smart Plug-in for BEA WebLogic Server (WebLogic SPI) metrics. The metric descriptions help you interpret the incoming WebLogic SPI data. You can use this information for customizing metric templates.

The chapter contains the following sections:

- [Metric Summary](#)
- [Metric Details](#)

## Metric Summary

WebLogic SPI metric templates have pre-defined settings that simplify setup tasks for the WebLogic SPI. However, you may want to customize these settings depending on your environment. This section and [Metric Details](#) on page 18 provides basic information required for such customizations.

The summary list provides a list of metrics and most basic information for each metric. Following the metric summary table are individual metric details for every WebLogic Server metric and, when available, its monitor template settings. No monitor settings exist for metrics used for reporting or graphing only, hence the setting is labeled 'N/A' (not applicable).

The column key for the Metric Summary sheet is listed in [Table 1](#).

**Table 1 Metric Summary Sheet: Columns Key**

<b>Metric Number</b>	The number assigned to the metric; for example 25 = B025. Numbers in the 200 range are for drill down metrics that collect values on a single instance of WebLogic Server; for example 225 = B225.
<b>Metric Name</b>	The metric name in abbreviated form; for example, EJBTranRbPct = EJB Transaction Rollback Percent.
<b>Description</b>	What the collected metric value represents.
<b>Avail. WebLogic Server Version</b>	WebLogic Server version in which the metric is available (7.0, 8.1, 9.x, 10.0).
<b>Type</b>	The purpose for which the metric is collected: A = Alarming R = Reporter reporting G = Reporter graphing
<b>Area</b>	The logical area of WebLogic Server in which the metric belongs.

**Table 2 Metric Summary**

No	Metric Name	Description	Avail. WLS Version	Type	Severity	Area
1	B001_ServerStatus	Status of a server	All	A	Critical Warning	Availability
2	B002_ServerStatusRep	Status of a server - reporting	All	R		Availability
5	B005_JVMMemUtilPct	% of heap space used in the JVM	All	GA	Critical Major	JVM
10	B010_ExQueThruRate	# of requests serviced by an execute queue per second	All	GR		Performance
11	B011_ExQThrdUtilPct	% of threads in use for a server's execute queue.	All	GRA	Critical Major Minor	Performance
12	B012_ExQueWaitCnt	# of client requests waiting to be serviced	All	GA	Minor	Performance
13	B013_SocketTrafficRt	# of socket connections opened per second	All	G		Performance
14	B014_ActiveSocketCnt	# of socket connections opened	All	GA	Minor	Performance
15	B015_SrvrRestartsPct	% of permissible restarts	7.0, 8.1, 9.x	GA	Critical Warning	Performance
16	B016_GloThrePoolOverload	Global Thread Pool Overload Condition	9.x	A	Critical	Performance
17	B017_WorkloadMgrOverload	Workload Manager Overload Condition	9.x	A	Critical	Performance

**Table 2 Metric Summary**

No	Metric Name	Description	Avail. WLS Version	Type	Severity	Area
25	B025_EJBFreePoolWtRt	# of times/ min no EJB beans were available from the free pool	All	GRA	Warning	EJB
225	B225_EJBFreePoolWait Rate	# of times/ min no EJB beans were available from the free pool (drill down)	All	A	Warning	EJB
26	B026_EJBTimeoutRt	# of times/ min a client timed out waiting for an EJB bean	All	GRA	Warning	EJB
226	B226_EJBTimeoutRate	# of times/ min a client timed out waiting for an EJB bean (drill down)	All	A	Warning	EJB
35	B035_EJBTranThruRt	# of EJB transactions per second	All	GRA	Warning	EJB
36	B036_EJBTranRbRt	# of EJB transactions rolled back per second	All	GRA	Warning	EJB
238	B238_EJBCacheHitPct	% of EJBs in the cache in use	All	RA	Warning	EJB
240	B240_ServletAveExecTime	Ave execution time for a servlet in msec	All	RA	Warning	Servlets
241	B241_ServletTimeCnt	Time spent in a servlet	All	R		Servlets
242	B242_ServletReqRate	# of requests for a servlet per second	All	RA	Warning	Servlets

**Table 2 Metric Summary**

No	Metric Name	Description	Avail. WLS Version	Type	Severity	Area
245	B245_WebAppSessionCnt	# of open sessions for a web application	All	RA	Warning	Web Applications
246	B246_WebAppHitRt	# of open sessions for a web application per second	All	R		Web Applications
251	B251_JMSUtilByMessagePct	% of JMS server filled based on # of All messages	All	RA	Critical Major	JMS
252	B252_JMSUtilByBytePct	% of JMS server filled based on total bytes	All	RA	Critical Major	JMS
253	B253_JMSThreshByMessagePct	% of time server threshold condition satisfied based on # of messages	All	RA	Warning	JMS
254	B254_JMSThreshByBytePct	% of time server threshold condition satisfied based on total bytes	All	RA	Warning	JMS
255	B255_JMSServerThruMessageRt	# of messages passed through JMS server per second	All	R		JMS
256	B256_JMSServerThruByteRt	# of bytes passed through JMS server per second	All	R		JMS

**Table 2 Metric Summary**

No	Metric Name	Description	Avail. WLS Version	Type	Severity	Area
260	B260_JDBCConnectionPoolUtil	% utilization of available JDBC connections in connection pool	All	RA	Critical Major	JDBC
61	B061_JDBCConPIWtCnt	# of clients waiting for a connection from connection pools	All	GA	Warning	JDBC
262	B262_JDBCConnectionPoolThruRt	# of clients serviced by connection pool per second	All	R		JDBC
63	B063_JDBCConnectionPoolLeakedConnectionsRtSum	# of unclosed JDBC connections and JDBC connections that have exceeded their max idle times	7.0, 8.1, 9.x	G		JDBC
263	B263_JDBCConnectionPoolLeakedConnectionsRt	Rate of leaked connections for the JDBC connection pool	7.0, 8.1, 9.x	RA	Warning	JDBC
264	B264_JDBCConnectionPoolFailures	JDBC connection pool failures	7.0, 8.1, 9.x	A	Warning	JDBC
265	B265_JDBCConnectionPoolAvgConnectionDelayTime	JDBC connection pool connection delay	7.0, 8.1, 9.x	RA	Warning	JDBC
70	B070_TransAveTime	Average commit time for transactions	All	GRA	Minor	Transactions

**Table 2 Metric Summary**

No	Metric Name	Description	Avail. WLS Version	Type	Severity	Area
270	B270_ConnectorConnectionPoolUtil	% utilization of available JCA connections in connection pool	7.0, 8.1, 9.x	RA	Critical Major	Connector
71	B071_TransRollbackPct	% of transactions rolled back	All	GRA	Minor	Transactions
72	B072_TransResErrRbPct	% of transactions rolled back due to resource error	All	GRA	Minor	Transactions
73	B073_TransAppErrRbPct	% of transactions rolled back due to application error	All	GRA	Minor	Transactions
74	B074_TransTimErrRbPct	% of transactions rolled back due to timeout error	All	GRA	Minor	Transactions
75	B075_TransSysErrRbPct	% of transactions rolled back due to system error	All	GRA	Minor	Transactions
76	B076_TransThruRate	# of transactions processed per second	All	GR		Transactions
77	B077_TransHeurCnt	% of transactions returning a heuristic decision	All	GRA	Minor	Transactions

**Table 2 Metric Summary**

No	Metric Name	Description	Avail. WLS Version	Type	Severity	Area
78	B078_ConnectorConnectionPoolLeakedConnRateSum	# of unclosed connector connections and ones that have exceeded their max idle time	7.0, 8.1, 9.x	G		Connector
278	B278_ConnectorConnectionPoolLeakedConnRate	Rate of leaked connections for the JCA connection pool	7.0, 8.1, 9.x	RA	Warning	Connector
79	B079_TransCapacityUtil	% utilization of transaction capacity	7.0, 8.1, 9.x	GRA	Critical Major	Transactions
80	B080_ClsOutMesFailRt	# of multicast messages per minute to cluster resent	All	GA	Minor	Cluster
81	B081_ClsInMesFailRt	# of multicast messages per minute from cluster lost by server	All	GA	Minor	Cluster
281	B281_XMLCacheDiskSize	Total number of cached entries on disk which contain external references in an XML parser	7.0, 8.1, 9.x	R	N/A	XML Cache
282	B282_XMLCacheMemory Size	Total number of cached entries in memory which contain external references in an XML parser	7.0, 8.1, 9.x	R	N/A	XML Cache

**Table 2 Metric Summary**

No	Metric Name	Description	Avail. WLS Version	Type	Severity	Area
283	B283_DeferredRequestsCnt	Number of deferred requests	9.x	GA	Warning	XML Cache
284	B284_ReqWaitTimeForThread	Request wait time for a thread	9.x	GA	Warning	XML Cache
85	B085_InvLoginAttCnt	# of invalid login attempts	All	GA	Minor	Security
285	B285_PendingReqCount	Number of pending requests	9.x	GA	Warning	XML Cache
286	B286_PendingReqPct	Percentage of pending requests	9.x	GA	Minor	XML Cache
287	B287_ReqMaxWaitTime	Maximum wait time for a thread request	9.x	GA	Warning	XML Cache
288	B288_StandbyThreadCount	Number of threads in the standby pool	9.x	GA	Warning	XML Cache
90	B090_TimeSerExcepCnt	# of exceptions thrown for all triggers	7.0	A	Minor	Time Service
91	B091_TimeSerThruRt	# of triggers executed per second	7.0	G		Time Service
92	B092_ExQueThroughput	average # of requests completed by the execute per second	9.x	GA	Warning	Time Service

**Table 2 Metric Summary**

<b>No</b>	<b>Metric Name</b>	<b>Description</b>	<b>Avail. WLS Version</b>	<b>Type</b>	<b>Severity</b>	<b>Area</b>
812	B812_DomainInfo	WebLogic domain configuration , cluster information, and physical machines	All	R		Special Reports
813	B813_ApplicationInfo	Applications running on a WebLogic Server	All	R		Special Reports
815	B815_TranInfo	Status of WebLogic Server(s)	All	R		Special Reports

## Metric Specification Description

WebLogic SPI metrics can be identified as BXXX, where XXX represents the number assigned to the metric. The letter 'B' that preceded the metric number designates the metric as a WebLogic SPI metric.

- WebLogic SPI metric numbers range from 0000 to 0999.
- The 0700 to 0799 range is reserved for User Defined Metrics.

The name of the metric monitor template associated with the metric begins with "WLSSPI" followed by an underscore and the metric number. Zeroes are used to total a four-digit number; for example, metric number B001 = monitor template WLSSPI\_0001

The name of the Application Bank reports use the metric number and name separated by an underscore. For example, for metric 5, the report is identified as B005\_JVMMemUtilPct.

**Table 3 Metric Attribute Definitions**

<b>Monitor Template Name</b>	Begins always with 'WLSSPI,' followed by the metric number. Within the monitor template, you can change settings as described in the definition. For example, you can change the settings for threshold value or severity.
<b>Metric Name</b>	The name assigned to the metric.
<b>Metric Type</b>	Shows how the metric is used: <ul style="list-style-type: none"> <li>• Alarming (using monitor template settings),</li> <li>• Reporting (within a report of the separately purchased HP Reporter)</li> <li>• Graphing (within a graph of the separately purchased HP Performance Manager).</li> </ul>
<b>Description</b>	What the metric represents.
<b>Avail. WebLogic Server Version</b>	The WebLogic Server version (7.0, 8.1, 9.x, 10.0) for which the metric is available.
<b>Severity: Condition with Threshold</b>	The severity of the exceeded threshold condition. (Critical, Major, Minor, Warning, Normal). If multiple conditions—for example, graduated thresholds—are defined within the metric, severity levels are identified according to the specific condition.
<b>Collection Interval</b>	How often the metric is collected and analyzed (5 min, 15 min, 1 hour, 1 time daily).
<b>HPOM Min/Max Threshold</b>	Because this setting is the same for all WebLogic Server metrics (all have maximum thresholds), it is omitted.
<b>Default HPOM Threshold</b>	Shows the default HPOM threshold for metrics with parallel monitor templates. Metrics with a threshold value of 0 are set at 0.5 because HPOM alarms must occur at <= or >= values. Since a 0 value would always trigger an alarm, the threshold is set to 0.5.
<b>HPOM Threshold Type</b>	Because this setting is the same for all WebLogic Server metrics (without reset), it is omitted.

**Table 3 Metric Attribute Definitions**

<b>Message Group</b>	The HPOM message group to which the metric belongs. (WLSSPI = conditions occurring in the WebLogic SPI and WebLogic = conditions occurring in the WebLogic Server).
<b>Message Text</b>	The message displayed for each condition.
<b>Instruction Text</b>	Problem-solving information (Probable causes, Potential impact, Suggested actions, and Reports).
<b>Report Type</b>	<p>When a report or graph is available, the method in which it is generated. (Application Bank, Automatic, Operator-initiated, N/A).</p> <ul style="list-style-type: none"> <li>• Application Bank - Reports can be generated from the Application Bank in HPOM.</li> <li>• Automatic - A report is generated automatically when an event is detected.</li> <li>• Operator-initiated - A report or graph manually generated by the operator.</li> <li>• N/A - No report nor graph are planned.</li> </ul> <p>All Automatic or Operator-initiated reports are available in the Application Bank. However, not all reports in the Application Bank are Automatic or Operator-initiated. Reports that use MeasureWare-only metrics (no alarms, just MeasureWare data) do not have an HPOM template for Operator-initiated nor Automatic actions. They are ONLY available in the Application Bank.</p>
<b>Area</b>	The logical area to which the metric belongs (Availability, JVM, Performance, EJB, Servlets, Web Applications, JMS, JDBC, Transactions, Connector, Cluster, XML Cache, Security, Time Service, Special Reports).

## Metric Details

In this section WebLogic SPI metrics are explained in detail.

### Metric B001\_ServerStatus

<b>Monitor Template Name</b>	WLSSPI_0001
<b>Metric Name</b>	B001_ServerStatus
<b>Metric Type</b>	Alarming
<b>Description</b>	Status of a server, monitors whether running or not.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition with threshold</b>	Critical: WLSSPI-0001.1, threshold 5 Warning: WLSSPI-0001.2, threshold 1.5
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0001.1: Server status is unknown (down) [Policy: <\$NAME>] WLSSPI-0001.2: Server status: Suspended [Policy: <\$NAME>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> For each server, this metric reports the status (running, shutdown in progress, shutdown pending, suspended, or unknown).</p> <p>If the server is not in a running state, the following events may have occurred:</p> <ol style="list-style-type: none"> <li>1 The WebLogic Administrator has selected “Shutdown this server” from the Administration console.</li> <li>2 The WebLogic Administrator has selected “Suspend this server” from the Administration console.</li> <li>3 The server may have gone down for other reasons.</li> </ol> <p><b>Potential Impact:</b> If the server is Shutdown or in the process of shutting down, the server is no longer be available. If the server is Suspended, it only accept requests from the Administration Server. Suspending the WebLogic Server only suspends server responses to HTTP requests. Java applications and RMI invocations are not suspended.</p> <p><b>Suggested action:</b> If the designated server is not running, the WebLogic Administrator should start the server using the appropriate script. It is important to note whether this is the Administration Server or a Managed Server, since the startup script will be different for each type.</p> <p>If the server has been suspended, it may have been placed in this state for a reason. A typical use of this feature would be in a situation where a WebLogic Server is running as a ‘hot’ backup for another server. When it is OK to do so, execute the ‘Resume this server’ command from the Administration console.</p>
<b>Report Type</b>	N/A
<b>Area</b>	Availability

## Metric B002\_ServerStatusRep

<b>Monitor Template Name</b>	N/A—Used to generate a report
<b>Metric Name</b>	B002_ServerStatusRep
<b>Metric Type</b>	Reporting
<b>Description</b>	Status of server—reporting
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	5m
<b>Message Text</b>	N/A

<b>Instruction Text</b>	N/A
<b>Report Type</b>	Application Bank Report (ASCII report)
<b>Area</b>	Availability

## Metric B005\_JVMMemUtilPct

<b>Monitor Template Name</b>	WLSSPI_0005
<b>Metric Name</b>	B005_JVMMemUtilPct
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Percentage of heap space used in the JVM.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Critical: WLSSPI-0005.1, threshold 98 Major: WLSSPI-0005.2, threshold 95
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0005.1: % of heap space used (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>] WLSSPI-0005.2: % of heap space used (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]

<p><b>Instruction Text</b></p>	<p><b>Probable cause:</b> The JVM is running out of available heap space. The JVM heap size may be set too low for the client load.</p> <p><b>Potential impact:</b> The JVM heap size determines how often and how long the VM spends collecting garbage (de-allocating unused Java objects). The Java heap is where the objects of a Java program live. When an object can no longer be reached from any pointer in the running program, the object is garbage.</p> <p>Garbage collection affects performance because JVM work cannot proceed during full garbage collection. An acceptable rate for garbage collection is application-specific and should be adjusted after analyzing the actual time and frequency of garbage collections.</p> <p>The goal of tuning your heap size is to minimize the time that you spend doing garbage collection while maximizing the number of clients that you can handle at a given time.</p> <p>If you set a large heap size, full garbage collection is slower, but it occurs less frequently. For a smaller heap size, full garbage collection is faster, but occurs more frequently.</p> <p><b>Suggested action:</b> For additional information on tuning your heap size, see the <i>Performance and Tuning</i> documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>.</p> <p>You can set the heap size using the options <code>-Xms</code> and <code>-Xmx</code> on the Java command line in the script used to start the server.</p> <p>Use the <code>-Xms</code> option to set the minimum size of the heap. Set this value to a multiple of 1024 that is greater than 1MB.</p> <p>Use the <code>-Xmx</code> option to set the maximum Java heap size. Set this value to a multiple of 1024 that is greater than 1MB.</p> <p>As a general rule, set minimum heap size equal to the maximum heap size. If you are using 1.3 Java HotSpot JVM, also set generation sizes. Make sure that the heap size is not larger than the available free RAM on your system. Use as large a heap size as possible without causing your system to swap pages to disk. The amount of free RAM on your system depends on your hardware configuration and the memory requirements of running processes on your machine. See your system administrator for help in determining the amount of free RAM on your system.</p> <p>Typically, you should use 80% of the available RAM (not taken by the operating system or other processes) for your JVM. If you find that you have a large amount of RAM remaining, run more WebLogic Servers on your machine.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. HP does not control the content of any non-HP site.</p>
<p><b>Report Type</b></p>	<p>Application Bank</p>
<p><b>Area</b></p>	<p>JVM</p>

## Metric B010\_ExQueThruRate

<b>Monitor Template Name</b>	N/A—Used to generate a report and graph
<b>Metric Name</b>	B010_ExQueThruRate
<b>Metric Type</b>	Reporting, Graphing
<b>Description</b>	Number of requests serviced by an execute queue per second. For WebLogic Server version 9.x and 10.0, there is only one execute queue.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	15m
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	N/A
<b>Area</b>	Performance

## Metric B011\_ExQThrdUtilPct

<b>Monitor Template Name</b>	WLSSPI_0011
<b>Metric Name</b>	B011_ExQThrdUtilPct
<b>Metric Type</b>	Alarming, Reporting, Graphing
<b>Description</b>	Percentage of threads in use for a server's execute queue. For WebLogic Server version 9.x and 10.0, there is only one execute queue.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Critical: WLSSPI-0011.1, threshold 90 Major: WLSSPI-0011.2, threshold 85 Minor: WLSSPI-0011.3, threshold 80
<b>Collection Interval</b>	15m
<b>Message Group</b>	WebLogic

---

<b>Message Text</b>	WLSSPI-0011.1: % of execute queue threads used (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>] WLSSPI-0011.2: % of execute queue threads used (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>] WLSSPI-0011.3: % of execute queue threads used (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
---------------------	--

---

<b>Instruction Text</b>	<p><b>Probable cause:</b> The utilization of the WebLogic server execute threads has exceeded a threshold value. The number of incoming client requests has resulted in all the execute threads being allocated.</p> <p><b>Potential impact:</b> At 100% utilization, the WebLogic server will not have any threads available to service incoming requests.</p> <p><b>Suggested action:</b> For additional information on tuning the execute thread pool, see the 'Performance and Tuning' documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>. Systems administrators can increase the total number of execute threads via the administrator's console. However, it should be noted that adding more threads does not necessarily imply that you can process more work. Even if you add more threads, you are still limited by the power of your processor. You can degrade performance by increasing this value unnecessarily. Because threads are resources that consume memory, a very high execute thread count causes more memory to be used and increases context switching. This degrades your performance. The value of the Thread Count depends very much on the type of work the application does. For example, if your client application is thin and does a lot of its work through remote invocation, the time your client application spends connected will be greater than for a client application that does a lot of client-side processing. So, if you do not need to use the additional threads for your work then you should not change the value of this attribute. The thread will not be held for the client application.</p> <p>If your application makes database calls that take a long time to return, you need more execute threads than an application that makes calls that are short and turn over very rapidly. For the latter, you can use a small number of execute threads and improve performance.</p> <p>The following scenarios can be used as a guideline for setting the ThreadCount:</p> <p>Thread Count &lt; number of CPUs: Increase the thread count</p> <p>Thread Count = number of CPUs: Increase the thread count</p> <p>Thread Count &gt; number of CPUs by a moderate number of threads: Practically ideal, although some tuning may be necessary</p> <p>Thread Count &gt; number of CPUs by a significant number: Reduce the number of threads.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. ## Metric B012\_ExQueWaitCnt

<b>Monitor Template Name</b>	WLSSPI_0012
<b>Metric Name</b>	B012_ExQueWaitCnt
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	The metric monitors an execute queue and its associated thread pool for each server. This metric particularly monitors the number of client requests waiting to be serviced.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0012.1, threshold 10
<b>Collection Interval</b>	15m
<b>Message Text</b>	WLSSPI-0012.1: # of requests waiting to be serviced (<\$VALUE>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The number of client requests waiting to be serviced has exceeded a threshold value.</p> <p>The rate of incoming requests has exceeded the number of threads available to perform the work.</p> <p><b>Potential impact:</b> Degradation in performance from a client perspective.</p> <p><b>Suggested action:</b></p> <p>Although client requests are waiting for an execute thread to be allocated, it is important to note that adding more threads does not necessarily imply that you can process more work. Even if you add more threads, you are still limited by the power of your processor. You can degrade performance by increasing this value unnecessarily. Because threads are resources that consume memory, a very high execute thread count causes more memory to be used and increases context switching. This degrades your performance.</p> <p>If this condition persists, you may need to upgrade your processor power. Another solution is to simply add resources. If your WebLogic server is configured in a cluster, then to increase the load handling capabilities you can add another WebLogic server to the cluster. Given a well-designed application, adding additional servers should provide linear scalability.</p> <p>For information on tuning the execute thread pool, see the <i>Performance and Tuning</i> documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. ## Metric B014\_ActiveSocketCnt

<b>Monitor Template Name</b>	WLSSPI_0014
<b>Metric Name</b>	B014_ActiveSocketCnt
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Number of socket connections opened.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0014.1, threshold 5
<b>Collection Interval</b>	15m
<b>Message Text</b>	WLSSPI-0014.1: # of socket connections currently open (<\$VALUE>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> The number of open sockets has exceeded a threshold value. The current number of open sockets is greater than the expected number of open sockets for this WebLogic server.</p> <p><b>Potential impact:</b> If the number of open sockets is greater than the number of socket reader threads allocated, incoming requests may be required to wait until a socket reader thread is free.</p> <p><b>Suggested action:</b> Consider increasing the number of socket reader threads from the Administration Server console, preferably equal to the potential maximum number of opened sockets. Allocating execute threads to act as socket reader threads increases the speed and the ability of the server to accept client requests. However, it is essential to balance the number of execute threads that are devoted to reading messages from a socket and those threads that perform the actual execution of tasks in the server.</p> <p>For information on tuning the execute thread pool, see the <i>Performance and Tuning</i> documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. HP does not control the content of any non-HP site.</p>

## Metric B025\_EJBFreePoolWtRt

<b>Monitor Template Name</b>	WLSSPI_025
<b>Metric Name</b>	B025_EJBFreePoolWtRt
<b>Metric Type</b>	Alarming, Reporting, Graphing
<b>Description</b>	Number of times per minute that no EJB beans were available from the free pool.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0

<b>Severity: Condition</b>	Warning: WLSSPI-0025.1, threshold 10
<b>Collection Interval</b>	15m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0025.1: # of times per minute no EJBs were available from the free pool (<\$VALUE>/min) too high (>=<\$THRESHOLD>/min) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The number of times per minute no EJBs were available from the free pool has exceeded the threshold value. The max-beans-in-free-pool element may have been set too low, or all instances of an EJB class may be active.</p> <p><b>Potential impact:</b> New clients requesting an EJB class will be blocked until an active EJB completes a method call.</p> <p><b>Suggested action:</b> When EJBs are created, the session bean instance is created and given an identity. When the client removes a bean, the bean instance is placed in the free pool. When you create a subsequent bean, you can avoid object allocation by reusing the previous instance that is in the free pool. The max-beans-in-free-pool element can improve performance if EJBs are frequently created and removed. The container creates new instances of message beans as needed for concurrent message processing. The max-beans-in-pool element puts an absolute limit on how many of these instances will be created. The container may override this setting according to the runtime resources that are available.</p> <p>For the best performance for stateless session and message beans, use the default setting max-beans-in-free-pool element. (The default is no limit.) This way, you can run as many beans in parallel, using as many threads as possible.</p> <p>The only reason to change the setting would be to limit the number of beans running in parallel or to limit access to an underlying resource. For example, if you use stateless session EJBs to implement a legacy connection pool, you do not want to allocate more bean instance than the number of connections that can be supported by your legacy system.</p> <p>For information on tuning EJB parameters, see the <i>Performance and Tuning</i> documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. <b>Metric Type</b>	Reporting
<b>Description</b>	Number of open sessions for a Web application per second.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	5m
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	Application Bank: ASCII report
<b>Area</b>	Web Applications

## Metric B251\_JMSUtilByMessagePct

<b>Monitor Template Name</b>	WLSSPI_0251
<b>Metric Name</b>	B251_JMSUtilByMessagePct
<b>Metric Type</b>	Alarming, Reporting
<b>Description</b>	<p>Percentage of the JMS server filled, based on the number of messages.</p> <p>Messages Maximum (the maximum message quota that can be stored in a JMS server) must be set to a number greater than zero in order for this metric to log reporter data and monitor thresholds. This value is configured from the WebLogic console.</p> <p>If the Messages Maximum value is set to the default value (-1), data is not logged and thresholds are not monitored.</p>
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	<p>Critical: WLSSPI-0251.1, threshold 98%</p> <p>Major: WLSSPI-0251.2, threshold 95%</p>
<b>Collection Interval</b>	15m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	<p>WLSSPI-0251.1: % of JMS queue filled by message count (&lt;\$VALUE&gt;%) too high (&gt;=&lt;\$THRESHOLD&gt;%) [Policy: &lt;\$NAME&gt;]</p> <p>WLSSPI-0251.2: % of JMS queue filled by message count (&lt;\$VALUE&gt;%) too high (&gt;=&lt;\$THRESHOLD&gt;%) [Policy: &lt;\$NAME&gt;]</p>
<b>Instruction Text</b>	<p><b>Probable cause:</b> The JMS Server queue utilization is greater than the threshold value. The size of the queue may be set too low.</p> <p><b>Potential impact:</b> Once the queue reaches one hundred percent capacity, users will not be able to deliver messages to this queue.</p> <p><b>Suggested action:</b> If possible, the administrator may want to increase the size of the queue via the Administration Server console. The administrator can also inspect the individual destinations within this JMS Server via the console to determine which destination queues are having problems.</p>
<b>Report Type</b>	Application Bank: ASCII report
<b>Area</b>	Java Message Service (JMS)

## Metric B252\_JMSUtilByBytePct

<b>Monitor Template Name</b>	WLSSPI_0252
<b>Metric Name</b>	B252_JMSUtilByBytePct
<b>Metric Type</b>	Alarming, Reporting
<b>Description</b>	<p>Percentage the JMS server filled, based on total bytes.</p> <p>Bytes Maximum (the maximum byte quota that can be stored in a JMS server) must be set to a number greater than zero in order for this metric to log reporter data and monitor thresholds. This value is configured from the WebLogic console.</p> <p>If the Bytes Maximum value is set to the default value (-1), data is not logged and thresholds are not monitored.</p>
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	<p>Critical: WLSSPI-0252.1, threshold 98%</p> <p>Major: WLSSPI-0252.2, threshold 95%</p>
<b>Collection Interval</b>	15m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0252.1: % of JMS queue filled by byte count (<\${VALUE}>%) too high (>=<\${THRESHOLD}>%) [Policy: <\${NAME}>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The JMS Server queue utilization is greater than the threshold value. The size of the queue may be set too low.</p> <p><b>Potential impact:</b> Once the queue reaches one hundred percent capacity, users will not be able to deliver messages to this queue.</p> <p><b>Suggested action:</b> If possible, the administrator may want to increase the size of the queue via the Administration Server console. The administrator can also inspect the individual destinations within this JMS Server via the console to determine which destination queues are having problems.</p>
<b>Report Type</b>	ASCII Report
<b>Area</b>	Java Message Service (JMS)

## Metric B253\_JMSThreshByMessagePct

<b>Monitor Template Name</b>	WLSSPI_0253
<b>Metric Name</b>	B253_JMSThreshByMessagePct
<b>Metric Type</b>	Alarming, Reporting
<b>Description</b>	Percentage of time the server threshold condition was satisfied, based on the number of messages.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0253.1, threshold 10%
<b>Collection Interval</b>	15m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0253.1: # of time queue threshold condition was satisfied by message count (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The amount of time this JMS queue has spent in the threshold condition has exceeded the threshold value. The JMS Server message queue threshold condition for the number of messages stored, as configured in the administration console, has been satisfied for a significant amount of time.</p> <p><b>Potential impact:</b> Once the queue reaches one hundred percent capacity, users will not be able to deliver messages to this queue.</p> <p><b>Suggested action:</b> If possible, the administrator may want to increase the size of the queue via the Administration Server console. The administrator can also inspect the individual destinations within this JMS Server via the console to determine which destination queues are having problems.</p>
<b>Report Type</b>	Application Bank: ASCII report
<b>Area</b>	Java Message Service (JMS)

## Metric B254\_JMSThreshByBytePct

<b>Monitor Template Name</b>	WLSSPI_0254
<b>Metric Name</b>	B254_JMSThreshByBytePct
<b>Metric Type</b>	Alarming, Reporting
<b>Description</b>	Percentage of time server threshold condition was satisfied, based on total bytes.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0

<b>Severity: Condition</b>	Warning: WLSSPI-0254.1, threshold 10%
<b>Collection Interval</b>	15m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0254.1: # of time queue threshold condition was satisfied by byte count (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The amount of time this JMS queue has spent in the threshold condition has exceeded the threshold value. The JMS Server message queue threshold condition for the number of bytes stored, as configured in the administration console, has been satisfied for a significant amount of time.</p> <p><b>Potential impact:</b> Once the queue reaches one hundred percent capacity, users will not be able to deliver messages to this queue.</p> <p><b>Suggested action:</b> If possible, the administrator may want to increase the size of the queue via the Administration Server console. The administrator can also inspect the individual destinations within this JMS Server via the console to determine which destination queues are having problems.</p>
<b>Report Type</b>	Application Bank Report (ASCII report)
<b>Area</b>	Java Message Service (JMS)

## Metric B255\_JMSServerThruMessageRt

<b>Monitor Template Name</b>	N/A—Used to generate a report
<b>Metric Name</b>	B255_JMSServerThruMessageRt
<b>Metric Type</b>	Reporting
<b>Description</b>	Number of messages passed through the JMS server per second.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	15m
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	Application Bank: ASCII report
<b>Area</b>	Java Message Service (JMS)

## Metric B256\_JMSServerThruByteRt

<b>Monitor Template Name</b>	N/A—Used to generate a report
<b>Metric Name</b>	B256_JMSServerThruByteRt
<b>Metric Type</b>	Reporting
<b>Description</b>	Number of bytes passed through the JMS server per second.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	15m
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	Application Bank: ASCII report
<b>Area</b>	Java Message Service (JMS)

## Metric B260\_JDBCConnectionPoolUtil

<b>Monitor Template Name</b>	WLSSPI_0260
<b>Metric Name</b>	B260_JDBCConnectionPoolUtil
<b>Metric Type</b>	Alarming, Reporting
<b>Description</b>	Percentage utilization of available JDBC connections in connection pool.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Critical: WLSSPI-0260.1, threshold 98% Major: WLSSPI-0260.2, threshold 95%
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0260.1: % utilization of available JDBC connections in connection pool (<\$VALUE>%) for application (<\$OPTION(applicationname)>) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> The JDBC connection pool utilization has exceeded the threshold value. The number of available JDBC connections is low.</p> <p><b>Potential impact:</b> Performance degradation caused by having to wait for a JDBC connection to a DBMS.</p> <p><b>Suggested action:</b> If the database system can support additional connections, the WebLogic administrator should increase the number of connections available for this connection pool. A good rule of thumb is that the maximum size of the connection pool should be equal to the number of Execute Threads configured in the WebLogic Server. This assumes that each thread uses one transaction to service a request and therefore needs just one connection. If this is not the case, then a slightly larger connection pool may be more efficient.</p> <p>The connection pool minimum size should be equal to the maximum size. This ensures that all database connections are acquired during server start-up and not when the server is under load.</p>
<b>Report Type</b>	Application Bank: ASCII Report
<b>Area</b>	JDBC

## Metric B061\_JDBCConPIWtCnt

<b>Monitor Template Name</b>	WLSSPI_0061
<b>Metric Name</b>	B061_JDBCConPIWtCnt
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Number of clients waiting for a connection from connection pools.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0061.1, threshold 10
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0061.1: # of clients waiting for a connection from connection pools (<\$VALUE>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> The number of clients waiting for a connection has exceeded the threshold value. The size of the connection pool is too small relative to the number of current client sessions that require JDBC Connections.</p> <p><b>Potential impact:</b> Client connection requests will be forced to wait for an available connection from the connection pool.</p> <p><b>Suggested action:</b> Increase the maximum size of the connection pool. A good rule of thumb is that the maximum size of the connection pool should be equal to the number of Execute Threads configured in the WebLogic Server. This assumes that each thread uses one transaction to service a request and therefore needs just one connection. If this is not the case, then a slightly larger connection pool may be more efficient.</p> <p>The connection pool minimum size should be equal to the maximum size. This ensures that all database connections are acquired during server start-up and not when the server is under load.</p>
<b>Report Type</b>	Operator-initiated graph
<b>Area</b>	JDBC

## Metric B262\_JDBCConnectionPoolThruRt

<b>Monitor Template Name</b>	N/A—Used to generate a report
<b>Metric Name</b>	B262_JDBCConnectionPoolThruRt
<b>Metric Type</b>	Reporting
<b>Description</b>	Number of clients serviced by connection pool per second.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	5m
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	Application Bank: ASCII report
<b>Area</b>	JDBC

## Metric B063\_JDBCConnectionPoolLeakedConnectionsRtSum

<b>Monitor Template Name</b>	N/A—Used to generate a graph
<b>Metric Name</b>	B063_JDBCConnectionPoolLeakedConnectionsRtSum
<b>Metric Type</b>	Graphing
<b>Description</b>	Number of unclosed JDBC connections and JDBC connections that have exceeded their maximum idle times in the connection pool per minute.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	5m
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	N/A
<b>Area</b>	JDBC

## Metric B263\_JDBCConnectionPoolLeakedConnectionsRt

<b>Monitor Template Name</b>	WLSSPI_0263
<b>Metric Name</b>	B263_JDBCConnectionPoolLeakedConnectionsRt
<b>Metric Type</b>	Alarming, Reporting (logged only; no report generated)
<b>Description</b>	Rate of leaked connections for the JDBC connection pool.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0263.1, threshold 100
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0263.1: Rate of leaked connections for the JDBC connection pool(<\$VALUE>) belongs to application (<\$OPTION(applicationname)>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> The rate of new leaked JDBC connections has exceeded the threshold value. JDBC connection leaks represent connections that were checked out of the connection pool but never returned with a close() method. Leaked connections cannot be used to fulfill later connection requests.</p> <p><b>Potential Impact:</b> When a connection is closed, the connection is then available for a future connection request. If the application fails to close the connection, the connection pool can be exhausted of its available connections, and future connection requests can therefore fail.</p> <p><b>Suggested action:</b> Correct the faulty application component. Connection pools provide ready-to-use pools of connections to a database, therefore eliminating the overhead of creating each connection when as needed by the application. When finished with a connection, applications must return the connection to the connection pool.</p> <p>For information on managing JDBC connections, see the <i>Programming WebLogic JDBC</i> documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. <b>Area</b>	JDBC

## Metric B264\_JDBCConnectionPoolFailures

<b>Monitor Template Name</b>	WLSSPI_0264
<b>Metric Name</b>	B264_JDBCConnectionPoolFailures
<b>Metric Type</b>	Alarming
<b>Description</b>	JDBC connection pool failures.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0264.1, threshold 10
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0264.1: JDBC conection pool failures (<\$VALUE>) for application (<\$OPTION(applicationname)>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The number of times a connection pool attempted to refresh a connection to a database and failed exceeds the threshold.This failure may happen because of database unavailability or broken connection to the database.</p> <p><b>Potential impact:</b> Client connection requests to the database may fail.</p> <p><b>Suggested action:</b> For information on managing JDBC connections, see the <i>Programming WebLogic JDBC</i> documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. HP does not control the content of any non-HP site.</p>
<b>Report Type</b>	Automatic Action: ASCII report
<b>Area</b>	JDBC

## Metric B265\_JDBCConnectionPoolAvgConnectionDelayTime

<b>Monitor Template Name</b>	WLSSPI_0265
<b>Metric Name</b>	B265_JDBCConnectionPoolAvgConnectionDelayTime
<b>Metric Type</b>	Alarming, Reporting (logged only; no report generated)
<b>Description</b>	JDBC connection pool connection delay, in milliseconds.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0265.1, threshold 10
<b>Collection Interval</b>	5m

<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0265.1: JDBC connection pool connection delay (<\$VALUE>) for application (<\$OPTION(applicationname)>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The average time it takes to get a physical fconnection from the database has exceeded the threshold.</p> <p><b>Potential impact:</b> NA</p> <p><b>Suggested action:</b> For information on managing JDBC connections, see the <i>Programming WebLogic JDBC</i> documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. HP does not control the content of any non-HP site.</p>
<b>Report Type</b>	Automatic Action: ASCII report
<b>Area</b>	JDBC

## Metric B070\_TranAveTime

<b>Monitor Template Name</b>	WLSSPI_0070
<b>Metric Name</b>	B070_TranAveTime
<b>Metric Type</b>	Alarming, Reporting, Graphing
<b>Description</b>	Average commit time for transactions.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0070.1, threshold, 100 msec
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0070.1: Ave. commit time for transactions (<\$VALUE>ms) too high (>=<\$THRESHOLD>ms) [Policy: <\$NAME>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> The average commit time for a transaction has exceeded the threshold value. This may be an indication of system load.</p> <p><b>Potential impact:</b> Degradation in the transaction throughput rate for the WebLogic Server.</p> <p><b>Suggested action:</b> The administrator can monitor individual transactions from the Administration Console. In addition to displaying statistics, the following information can also be displayed:</p> <ol style="list-style-type: none"> <li>1 Transactions by name, including rollback and time active information.</li> <li>2 Transactions by resource, including statistics on total, committed, and rolled back transactions.</li> <li>3 All active transactions, including information on status, servers, resources, properties, and the transaction identifier.</li> </ol>
<b>Report Type</b>	Application Bank: ASCII report
<b>Area</b>	Transactions

## Metric B270\_ConnectorConnectionPoolUtil

<b>Monitor Template Name</b>	WLSSPI_0270
<b>Metric Name</b>	B270_ConnectorConnectionPoolUtil
<b>Metric Type</b>	Alarming, Reporting (logged only; no report generated)
<b>Description</b>	Percentage utilization of available JCA connections in connection pool.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Critical: WLSSPI-0270.1, threshold 98 Major: WLSSPI-0270.2, threshold 95
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0270.1: % utilization of available JCA connections in connection pool (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>] WLSSPI-0270.2: % utilization of available JCA connections in connection pool (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> The utilization of a J2EE Connector connection pool (that is, the number of connections in the pool that are being used) has exceeded a threshold value. The number of requested connections to a resource is approaching or has reached the maximum allowed.</p> <p><b>Potential impact:</b> As ManagedConnections are created over time, the amount of system resources-such as memory and disk space-that each ManagedConnection consumes increases and may affect the performance of the overall system. If a new ManagedConnection needs to be created during a connection request, WebLogic Server ensures that no more than the maximum number of allowed ManagedConnections are created. If the maximum number is reached, WebLogic Server attempts to recycle a ManagedConnection from the connection pool. However, if there are no connections to recycle, a warning is logged indicating that the attempt to recycle failed and that the connection request can only be granted for the amount of connections up to the allowed maximum amount.</p> <p><b>Suggested action:</b> WebLogic Server allows you to configure a setting for the allowed maximum number of allocated connections.</p> <p>For information on managing J2EE connections, see the “Connection Management” section of the <i>Programming WebLogic J2EE Connectors</i> documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. HP does not control the content of any non-HP site.</p>
<b>Report Type</b>	Automatic Action: ASCII report
<b>Area</b>	Connector

## Metric B071\_TransRollbackPct

<b>Monitor Template Name</b>	WLSSPI_0071
<b>Metric Name</b>	B071_TransRollbackPct
<b>Metric Type</b>	Alarming, Reporting, Graphing
<b>Description</b>	Percentage of transactions rolled back, based on the total.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0071.1, threshold, 1
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0071.1: % of transactions rolled back (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The percentage of transactions rolled back has exceeded the threshold value. Application design issues or resource issues.</p> <p><b>Potential impact:</b> User requests are not being successfully completed.</p> <p><b>Suggested action:</b> The WebLogic administrator should check the necessary database systems and ensure they are functioning correctly. In addition, the administrator should check the following configurable transaction attributes:</p> <p>Timeout Seconds - the time a transaction may be active before the system forces a rollback.</p> <p>Abandon Timeout Seconds - the maximum time that a transaction coordinator persists in attempting to complete a transaction.</p> <p>Before Completion Iteration Limit - The number of beforeCompletion callbacks that are processed before a system forces a rollback.</p> <p>The administrator can monitor individual transactions from the Administration Console. In addition to displaying statistics, the following information can also be displayed:</p> <ol style="list-style-type: none"> <li>1 Transactions by name, including rollback and time active information.</li> <li>2 Transactions by resource, including statistics on total, committed, and rolled back transactions.</li> <li>3 All active transactions, including information on status, servers, resources, properties, and the transaction identifier.</li> </ol>
<b>Report Type</b>	Application Bank: ASCII report
<b>Area</b>	Transactions

## Metric B072\_TransResErrRbPct

<b>Monitor Template Name</b>	WLSSPI_0072
<b>Metric Name</b>	B072_TransResErrRbPct
<b>Metric Type</b>	Alarming, Reporting, Graphing
<b>Description</b>	Percentage of the transactions rolled back due to resource error.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0072.1, threshold 1
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0072.1: % of transactions rolled back due to resource error (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The percent of transactions rolled back due to resource errors has exceeded the threshold value. Transactions are not successfully completing due to resource errors.</p> <p><b>Potential impact:</b> Fewer user requests are being successfully completed.</p> <p><b>Suggested action:</b> The administrator can monitor individual transactions from the Administration Console. In addition to displaying statistics, the following information can also be displayed:</p> <ol style="list-style-type: none"> <li>1 Transactions by name, including rollback and time active information.</li> <li>2 Transactions by resource, including statistics on total, committed, and rolled back transactions.</li> <li>3 All active transactions, including information on status, servers, resources, properties, and the transaction identifier.</li> </ol>
<b>Report Type</b>	Application Bank: ASCII report
<b>Area</b>	Transactions

## Metric B073\_TransAppErrRbPct

<b>Monitor Template Name</b>	WLSSPI_0073
<b>Metric Name</b>	B073_TransAppErrRbPct
<b>Metric Type</b>	Alarming, Reporting, Graphing
<b>Description</b>	Percentage of transactions rolled back due to application error.

<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0073.1, threshold 1
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0073.1: % of transactions rolled back due to application error (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The percent of transactions rolled back due to application errors has exceeded the threshold value. Transactions are not successfully completing due to application errors.</p> <p><b>Potential impact:</b> Fewer user requests are being successfully completed.</p> <p><b>Suggested action:</b> The administrator can monitor individual transactions from the Administration Console. In addition to displaying statistics, the following information can also be displayed:</p> <ol style="list-style-type: none"> <li>1 Transactions by name, including rollback and time active information.</li> <li>2 Transactions by resource, including statistics on total, committed, and rolled back transactions.</li> <li>3 All active transactions, including information on status, servers, resources, properties, and the transaction identifier.</li> </ol>
<b>Report Type</b>	Operator-initiated graph; Application Bank: ASCII report
<b>Area</b>	Transactions

## Metric B074\_TrانTimErrRbPct

<b>Monitor Template Name</b>	WLSSPI_0074
<b>Metric Name</b>	B074_TrانTimErrRbPct
<b>Metric Type</b>	Alarming, Reporting, Graphing
<b>Description</b>	Percentage of transactions rolled back due to a timeout error.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0074.1, threshold 1
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0074.1: % of transactions rolled back due to timeout error (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The percent of transactions rolled back due to timeout errors has exceeded the threshold value. Transactions are not successfully completing due to timeout errors.</p> <p><b>Potential impact:</b> Fewer user requests are being successfully completed.</p> <p><b>Suggested action:</b> The administrator can monitor individual transactions from the Administration Console. In addition to displaying statistics, the following information can also be displayed:</p> <ol style="list-style-type: none"><li>1 Transactions by name, including rollback and time active information.</li><li>2 Transactions by resource, including statistics on total, committed, and rolled back transactions.</li><li>3 All active transactions, including information on status, servers, resources, properties, and the transaction identifier.</li></ol>
<b>Report Type</b>	Operator-initiated graph; Application Bank: ASCII report
<b>Area</b>	Transactions

## Metric B075\_TrانSysErrRbPct

<b>Monitor Template Name</b>	WLSSPI_0075
<b>Metric Name</b>	B075_TrانSysErrRbPct
<b>Metric Type</b>	Alarming, Reporting, Graphing
<b>Description</b>	Percentage of the transactions rolled back due to system error.

<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0075.1, threshold 1
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0075.1: % of transactions rolled back due to system error (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The percent of transactions rolled back due to system errors has exceeded the threshold value. Transactions are not successfully completing due to system errors.</p> <p><b>Potential impact:</b> Fewer user requests are being successfully completed.</p> <p><b>Suggested action:</b> The administrator can monitor individual transactions from the Administration Console. In addition to displaying statistics, the following information can also be displayed:</p> <ol style="list-style-type: none"> <li>1 Transactions by name, including rollback and time active information.</li> <li>2 Transactions by resource, including statistics on total, committed, and rolled back transactions.</li> <li>3 All active transactions, including information on status, servers, resources, properties, and the transaction identifier.</li> </ol>
<b>Report Type</b>	Operator-initiated graph; Application Bank: ASCII report
<b>Area</b>	Transactions

## Metric B076\_TrانThruRate

<b>Monitor Template Name</b>	N/A—Used to generate a report and graph
<b>Metric Name</b>	B076_TrانThruRate
<b>Metric Type</b>	Graphing, Reporting
<b>Description</b>	Number of transactions processed per second.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	5m
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A

<b>Instruction Text</b>	N/A
<b>Report Type</b>	N/A
<b>Area</b>	Transactions

## Metric B077\_TrانHeurCnt

<b>Monitor Template Name</b>	WLSSPI_0077
<b>Metric Name</b>	B077_TrانHeurCnt
<b>Metric Type</b>	Alarming, Reporting, Graphing
<b>Description</b>	Percentage of transactions returning a heuristic decision.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0075.1, threshold 1
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0077.1: % of transactions returning a heuristic decision (<\${VALUE}>%) too high (>=<\${THRESHOLD}>%) [Policy: <\${NAME}>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> The percentage of transactions returning a heuristic decision has exceeded the threshold value. A heuristic completion (or heuristic decision) occurs when a resource makes a unilateral decision during the completion stage of a distributed transaction to commit or rollback updates. Network failures or transaction timeouts are possible causes for heuristic completion.</p> <p><b>Potential impact:</b> A heuristic decision can leave distributed data in an indeterminate state.</p> <p><b>Suggested action:</b> In the event of a heuristic decision, one of the following heuristic outcome exceptions may be thrown:</p> <ul style="list-style-type: none"><li>• <b>HeuristicRollback</b> - one resource participating in a transaction decided to autonomously rollback its work, even though it agreed to prepare itself and wait for a commit decision. If the Transaction Manager decided to commit the transaction, the resource's heuristic rollback decision was incorrect, and might lead to an inconsistent outcome since other branches of the transaction were committed.</li><li>• <b>HeuristicCommit</b> - one resource participating in a transaction decided to autonomously commit its work, even though it agreed to prepare itself and wait for a commit decision. If the Transaction Manager decided to rollback the transaction, the resource's heuristic commit decision was incorrect, and might lead to an inconsistent outcome since other branches of the transaction were rolled back.</li><li>• <b>HeuristicMixed</b> - the Transaction Manager is aware that a transaction resulted in a mixed outcome, where some participating resources committed and some rolled back. The underlying cause was most likely heuristic rollback or heuristic commit decisions made by one or more of the participating resources.</li></ul>
-------------------------	--

<b>Instruction text (cont.)</b>	<ul style="list-style-type: none"> <li>HeuristicHazard - the Transaction Manager is aware that a transaction might have resulted in a mixed outcome, where some participating resources committed and some rolled back. But system or resource failures make it impossible to know for sure whether a Heuristic Mixed outcome definitely occurred. The underlying cause was most likely heuristic rollback or heuristic commit decisions made by one or more of the participating resources.</li> <li>When a heuristic completion occurs, a message is written to the server log. See your database vendor documentation for instructions on resolving heuristic completions.</li> </ul> <p>Some resource managers save context information for heuristic completions. This information can be helpful in resolving resource manager data inconsistencies. If the ForgetHeuristics attribute is selected (set to true) on the JTA panel of the WebLogic Console, this information is removed after an heuristic completion. When using a resource manager that saves context information, you may want to set the ForgetHeuristics attribute to false.</p>
<b>Report Type</b>	Operator-initiated graph; Application Bank: ASCII report
<b>Area</b>	Transactions

## Metric B078\_ConnectorConnectionPoolLeakedConnRateSum

<b>Monitor Template Name</b>	N/A—Used to generate a graph
<b>Metric Name</b>	B078_ConnectorConnectionPoolLeakedConnRateSum
<b>Metric Type</b>	Graphing
<b>Description</b>	Number of unclosed connector connections and connector connections that have exceeded their maximum idle times in the connection pool per minute.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	5m
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	N/A
<b>Area</b>	Connector

## Metric B278\_ConnectorConnectionPoolLeakedConnRate

<b>Monitor Template Name</b>	WLSSPI_0278
<b>Metric Name</b>	B278_ConnectorConnectionPoolLeakedConnRate
<b>Metric Type</b>	Alarming, Reporting (logged only; no report generated)
<b>Description</b>	Rate of leaked connections for the JCA connection pool.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0278.1, threshold 100
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0278.1: Rate of leaked connections for the JCA connection pool (<\$VALUE>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The rate of new leaked connections has exceeded the threshold value. Connection leaks result from application components not closing a connection after using it.</p> <p><b>Potential impact:</b> When a connection is closed, the connection is then available for a future connection request. If the application fails to close the connection, the connection pool can be exhausted of its available connections, and future connection requests can therefore fail.</p> <p><b>Suggested action:</b> Correct the faulty application component. See the annotation report for information on current connections and indicates which have been idle for a period extending beyond the configured maximum.</p> <p>For information on connection leaks, see the <i>Programming WebLogic J2EE Connectors</i> documentation for your WebLogic Server version available through <a href="http://e-docs.bea.com/">http://e-docs.bea.com/</a>.</p> <p><b>Disclaimer:</b> Clicking on a URL in the above text may take the user to a non-HP site. HP does not control the content of any non-HP site.</p>
<b>Report Type</b>	Automatic Action: ASCII report
<b>Area</b>	Connector

## Metric B079\_TranCapacityUtil

<b>Monitor Template Name</b>	WLSSPI_0079
<b>Metric Name</b>	B079_TranCapacityUtil
<b>Metric Type</b>	Alarming, Graphing, Reporting
<b>Description</b>	Percentage utilization of transaction capacity.

<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Critical: WLSSPI-0079.1, threshold 98 Major: WLSSPI-0079.2, threshold 95
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0079.x: % utilization of transaction capacity (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
<b>Instruction Text</b>	<b>Probable cause:</b> The number of simultaneous in-progress transactions (as a percent of the maximum number of transactions allowed in the server) has exceeded a threshold value. <b>Potential Impact:</b> NA <b>Suggested Action:</b> NA
<b>Report Type</b>	Automatic Action: ASCII report
<b>Area</b>	Transactions

## Metric B080\_ClsOutMesFailRt

<b>Monitor Template Name</b>	WLSSPI_0080
<b>Metric Name</b>	B080_ClsOutMesFailRt
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Number of multicast messages per minute to cluster re-sent.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0080.1, threshold 1
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0080.1: # of multicast messages to cluster that were resent (<\$VALUE>/min) too high (>=<\$THRESHOLD>/min) [Policy: <\$NAME>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> The number of multicast messages to the cluster that were resent has exceeded the threshold value. This could be caused by the cluster configuration or the network topology.</p> <p><b>Potential impact:</b> Potential loss of multicast packets.</p> <p><b>Suggested action:</b> Because multicast controls critical functions related to detecting failures and maintaining the cluster-wide JNDI tree, it is important that neither the cluster configuration nor the basic network topology interfere with multicast communication. Always consider the following rules when configuring or planning a WebLogic Server cluster.</p> <p>For most deployments, limiting clustered servers to a single subnet ensures that multicast messages are reliably transmitted. In special cases, however, you may want to distribute a WebLogic Server cluster across subnets in a Wide Area Network (WAN). This may be desirable to increase redundancy in a clustered deployment, or to distribute clustered instances over a larger geographical area.</p> <p>If you choose to distribute a cluster over a WAN (or across multiple subnets), you must plan and configure your network topology to ensure that multicast messages are reliably transmitted to all servers in the cluster. Specifically, your network must meet the following requirements:</p> <ol style="list-style-type: none"> <li>1 The network must fully support IP multicast packet propagation. In other words, all routers and other tunneling technologies must be configured to propagate multicast messages to clustered instances.</li> <li>2 The network latency must be sufficiently small as to ensure that most multicast messages reach their final destination in 200 to 300 milliseconds.</li> <li>3 The multicast Time-To-Live (TTL) value must be high enough to ensure that routers do not discard multicast packets before they reach their final destination.</li> </ol> <p><b>Note:</b> Distributing a WebLogic Server cluster over a WAN may require network facilities in addition to the multicast requirements described above. For example, you may want to configure load balancing hardware to ensure that client requests are directed to servers in the most efficient manner (to avoid unnecessary network hops).</p>
<b>Report Type</b>	Operator-initiated graph
<b>Area</b>	Cluster

## Metric B081\_ClsInMesFailRt

<b>Monitor Template Name</b>	WLSSPI_0081
<b>Metric Name</b>	B081_ClsInMesFailRt
<b>Metric Type</b>	Alarming, Graphing

<b>Description</b>	Number of multicast messages per minute from cluster lost by server.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0081.1, threshold 1
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0081.1: # of multicast messages from cluster lost by server (<\$VALUE>/min) too high (>=<\$THRESHOLD>/min) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The number of multicast messages from the cluster that were lost by the server has exceeded the threshold value. This could be caused by the cluster configuration or the network topology.</p> <p><b>Potential impact:</b> Potential loss of critical data.</p> <p><b>Suggested action:</b> Because multicast controls critical functions related to detecting failures and maintaining the cluster-wide JNDI tree, it is important that neither the cluster configuration nor the basic network topology interfere with multicast communication. Always consider the following rules when configuring or planning a WebLogic Server cluster.</p> <p>For most deployments, limiting clustered servers to a single subnet ensures that multicast messages are reliably transmitted. In special cases, however, you may want to distribute a WebLogic Server cluster across subnets in a Wide Area Network (WAN). This may be desirable to increase redundancy in a clustered deployment, or to distribute clustered instances over a larger geographical area.</p>

<b>Instruction Text (cont.)</b>	<p>If you choose to distribute a cluster over a WAN (or across multiple subnets), you must plan and configure your network topology to ensure that multicast messages are reliably transmitted to all servers in the cluster. Specifically, your network must meet the following requirements:</p> <ol style="list-style-type: none"> <li>1 The network must fully support IP multicast packet propagation. ## Metric B281\_XMLCacheDiskSize

<b>Monitor Template Name</b>	WLSSPI_0281
<b>Metric Name</b>	B281_XMLCacheDiskSize
<b>Metric Type</b>	Reporting (logged only; no report generated)
<b>Description</b>	Total number of cached entries on disk which contain external references in an XML parser.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	Reserved for future use
<b>Area</b>	XML Cache

## Metric B282\_XMLCacheMemorySize

<b>Monitor Template Name</b>	WLSSPI_0282
<b>Metric Name</b>	B282_XMLCacheMemorySize
<b>Metric Type</b>	Reporting
<b>Description</b>	Total number of cached entries in memory which contain external references in an XML parser.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	Reserved for future use
<b>Area</b>	XML Cache

## Metric B283\_DeferredRequestsCnt

<b>Monitor Template Name</b>	WLSSPI_0283
<b>Metric Name</b>	B283_DeferredRequestsCnt
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Number of deferred requests.
<b>Avail. WebLogic Server Version</b>	9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0283.1, threshold 100
<b>Collection Interval</b>	
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0283.1: Deferred requests count (<\$VALUE>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> This metric is used to monitor the number of requests that were denied a thread for execution because of the max-threads-constraint constraint. Max-threads-constraint is one of the work manager components that you can use to control the performance of your application by referencing the name of the component in the application's deployment descriptor. The max-threads-constraint constraint limits the number of concurrent threads executing requests from the constrained work set. The default is unlimited. Once the constraint is reached the server does not schedule requests of this type until the number of concurrent executions falls below the limit.</p> <p><b>Potential Impact:</b> NA</p> <p><b>Suggested Action:</b> NA</p>
<b>Report Type</b>	N/A
<b>Area</b>	XML cache

## Metric B284\_ReqWaitTimeForThread

<b>Monitor Template Name</b>	WLSSPI_0284
<b>Metric Name</b>	B284_ReqWaitTimeForThread
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Thread request wait time.
<b>Avail. WebLogic Server Version</b>	9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0284.1, threshold 1000
<b>Collection Interval</b>	

<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0284.1: Request wait time for a thread (<\$VALUE> ms) too high (>=<\$THRESHOLD> ms) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> This metric is used to monitor the time (in milliseconds) a request had to wait for a thread. Only requests whose execution is needed to satisfy the min_threads_constraint are considered. The min-threads-constraint is one of the work manager components that you can use to control the performance of your application by referencing the name of the component in the application's deployment descriptor. This constraint guarantees a number of threads the server will allocate to affected requests to avoid deadlocks. The default is zero. This type of constraint has an effect primarily when the server instance is close to a deadlock condition. In that case, the constraint will cause WebLogic Server to schedule a request from a even if requests in the service class have gotten more than its fair share recently.</p> <p><b>Potential Impact:</b> NA</p> <p><b>Suggested Action:</b> NA</p>
<b>Report Type</b>	N/A
<b>Area</b>	XML cache

## Metric B085\_InvLoginAttCnt

<b>Monitor Template Name</b>	WLSSPI_0085
<b>Metric Name</b>	B085_InvLoginAttCnt
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Number of invalid login attempts.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	Minor: WLSSPI-0085.1, threshold 2
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0085.1: # of invalid login attempts (<\$VALUE>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The number of invalid login attempts has exceeded the threshold value. This could be an attempted security breach.</p> <p><b>Potential impact:</b> If the security breach is successful, the security of the WebLogic Server environment could be compromised.</p> <p><b>Suggested action:</b> If the invalid login attempts is repeated frequently, you may wish to implement the weblogic.security.audit package. This will allow you to review the audit records to determine if there has been a security breach or an attempted security breach.</p>
<b>Report Type</b>	Operator-initiated graph
<b>Area</b>	Security

## Metric B285\_PendingReqCount

<b>Monitor Template Name</b>	WLSSPI_0285
<b>Metric Name</b>	B285_PendingReqCount
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Number of pending requests.
<b>Avail. WebLogic Server Version</b>	9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0285.1, threshold 100
<b>Collection Interval</b>	
<b>Message Group</b>	WebLogic

<b>Message Text</b>	WLSSPI-0285.1: Number of pending requests (<\$VALUE>) too high (>=<\$THRESHOLD>) [Policy: <\$NAME>]
<b>Instruction Text</b>	<b>Probable cause:</b> This metric is used to monitor the number of requests that are pending because they are waiting for an available thread. <b>Potential Impact:</b> NA <b>Suggested Action:</b> NA
<b>Report Type</b>	N/A
<b>Area</b>	XML cache

## Metric B286\_PendingReqPct

<b>Monitor Template Name</b>	WLSSPI_0286
<b>Metric Name</b>	B286_PendingReqPct
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Percentage of requests pending.
<b>Avail. WebLogic Server Version</b>	9.x, 10.0
<b>Severity: Condition</b>	Major: WLSSPI-0286.1, threshold 98
<b>Collection Interval</b>	
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0286.1: Percentage of pending requests (<\$VALUE>%) too high (>=<\$THRESHOLD>%) [Policy: <\$NAME>]
<b>Instruction Text</b>	<b>Probable cause:</b> This metric is used to monitor the percentage of the requests that are pending because they are waiting for an available thread. <b>Potential Impact:</b> NA <b>Suggested Action:</b> NA
<b>Report Type</b>	N/A
<b>Area</b>	XML cache

## Metric B287\_ReqMaxWaitTime

<b>Monitor Template Name</b>	WLSSPI_0287
<b>Metric Name</b>	B287_ReqMaxWaitTime
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Maximum time a request waits for a thread.
<b>Avail. WebLogic Server Version</b>	9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0287.1, threshold 1000
<b>Collection Interval</b>	
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0287.1: Maximum time a request had to wait for a thread (<\$VALUE> ms) too high (>=<\$THRESHOLD> ms) [Policy: <\$NAME>]
<b>Instruction Text</b>	<b>Probable cause:</b> This metric is used to monitor the maximum time a request had to wait for a thread. <b>Potential Impact:</b> NA <b>Suggested Action:</b> NA
<b>Report Type</b>	N/A
<b>Area</b>	XML cache

## Metric B288\_StandbyThreadCount

<b>Monitor Template Name</b>	WLSSPI_0288
<b>Metric Name</b>	B288_StandbyThreadCount
<b>Metric Type</b>	Alarming, Graphing
<b>Description</b>	Number of threads in the standby pool.
<b>Avail. WebLogic Server Version</b>	9.x, 10.0
<b>Severity: Condition</b>	Warning: WLSSPI-0288.1, threshold 10
<b>Collection Interval</b>	
<b>HPOM Threshold</b>	Minimum
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0288.1: Number of threads in the standby pool (<\$VALUE>) too low (\<=<\$THRESHOLD>) [Policy: <\$NAME>]

<b>Instruction Text</b>	<p><b>Probable cause:</b> This metric is used to monitor the number of threads in the standby pool. Surplus threads that are not needed to handle the present work load are designated as standby and added to the standby pool. These threads are activated when more threads are needed. The value of this count must be in an acceptable range to meet performance criteria.</p> <p><b>Potential Impact:</b> NA</p> <p><b>Suggested Action:</b> NA</p>
<b>Report Type</b>	N/A
<b>Area</b>	XML cache

## Metric B090\_TimeSerExcepCnt

<b>Monitor Template Name</b>	WLSSPI_0090
<b>Metric Name</b>	B090_TimeSerExcepCnt
<b>Metric Type</b>	Alarming
<b>Description</b>	Number of exceptions thrown for all triggers.
<b>Avail. WebLogic Server Version</b>	7.0
<b>Severity: Condition</b>	Minor: WLSSPI-0090.1, threshold 1
<b>Collection Interval</b>	5m
<b>Message Group</b>	WebLogic
<b>Message Text</b>	WLSSPI-0090.1: # of exceptions thrown for all triggers (<VALUE>) too high (>=<THRESHOLD>) [Policy: <NAME>]
<b>Instruction Text</b>	<p><b>Probable cause:</b> The number of exceptions thrown for all triggers has exceeded the threshold value. Exceptions were thrown during a scheduled action.</p> <p><b>Potential impact:</b> The trigger throwing the exception will not be rescheduled.</p> <p><b>Suggested action:</b> If you want to reschedule a trigger after an exception, the application must catch the exception and schedule the trigger again.</p>
<b>Report Type</b>	ASCII Report
<b>Area</b>	Time Service

## Metric B091\_TimeSerThruRt

<b>Monitor Template Name</b>	WLSSPI_0091
<b>Metric Name</b>	B091_TimeSerThruRt
<b>Metric Type</b>	Graphing
<b>Description</b>	Number of triggers executed per second.
<b>Avail. WebLogic Server Version</b>	7.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	5m
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	N/A
<b>Area</b>	Time Service

## Metric B092\_ExQueThroughput

<b>Monitor Template Name</b>	WLSSPI_0092
<b>Metric Name</b>	B092_ExQueThroughput
<b>Metric Type</b>	Graphing, Alarming
<b>Description</b>	Average number of requests completed by the execute queue per second.
<b>Avail. WebLogic Server Version</b>	9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	
<b>Message Group</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	N/A
<b>Area</b>	Time Service

## Metric B812\_DomainInfo

<b>Monitor Template Name</b>	N/A—Used to generate a report displayed by the View WebLogic Servers application
<b>Metric Name</b>	B812_DomainInfo
<b>Metric Type</b>	Reporting
<b>Description</b>	WebLogic domain configuration, cluster information, and physical machines.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	Application Bank Report (ASCII report)
<b>Area</b>	Special Reports

## Metric B813\_ApplicationInfo

<b>Monitor Template Name</b>	N/A—Used to generate a report displayed by the View Deployed Apps application
<b>Metric Name</b>	B813_ApplicationInfo
<b>Metric Type</b>	Reporting
<b>Description</b>	Applications running on a WebLogic Server.
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	Application Bank Report (ASCII report)
<b>Area</b>	Special Reports

## Metric B815\_Trainfo

<b>Monitor Template Name</b>	N/A—Used to generate a report displayed by the Check WebLogic application
<b>Metric Name</b>	B815_Trainfo
<b>Metric Type</b>	Reporting
<b>Description</b>	Status for the WebLogic Server(s).
<b>Avail. WebLogic Server Version</b>	7.0, 8.1, 9.x, 10.0
<b>Severity: Condition</b>	N/A
<b>Collection Interval</b>	N/A
<b>Message Text</b>	N/A
<b>Instruction Text</b>	N/A
<b>Report Type</b>	Application Bank Report (ASCII report)
<b>Area</b>	Special Reports

## 2 WebLogic SPI Log File and Configuration File Templates

This chapter describes the Smart Plug-in for BEA WebLogic Server (WebLogic SPI) templates that monitor the logfiles of WebLogic Server and WebLogic SPI. These templates detect error messages internal to WebLogic SPI, as well as changes made to the WebLogic Server XML configuration files.

### WebLogic Config Files

<b>Description</b>	Detects changes in the WebLogic xml configuration file.
<b>Severity</b>	Warning
<b>Message Group</b>	WebLogic
<b>Help Text</b>	<p>One of the WebLogic Server properties files has been saved. Very likely, the file contents has changed. The name of the updated configuration file is listed in field 'Object' of this HPOM message.</p> <p><b>Probable cause:</b> Re-configuration of the WebLogic Server.</p> <p><b>Potential impact:</b> When starting the WebLogic Server, the new configuration will be used. If some of the changes are not correct, this might lead to problems.</p> <p><b>Suggested action:</b> Review the updated properties file. If the changes to the configuration file are correct, then you can acknowledge this message.</p>

### WLSSPI-Error Log

<b>Description</b>	Monitors the WebLogic SPI error log and captures critical errors, which it sends to the Message Browser.
<b>Severity</b>	Critical
<b>Message Group</b>	WLSSPI
<b>Help Text</b>	Available for each error as detected: WASSPI-1 through WASSPI-232. For detailed help text for all error messages, see Chapter 6 of <i>HP Operations Smart Plug-in for BEA WebLogic Server Configuration Guide</i> .

## WebLogic Log Template

<b>Description</b>	Catches critical errors and warnings in the WebLogic Server log file.
<b>Severity</b>	Critical Warning
<b>Message Group</b>	WebLogic
<b>Help Text</b>	<p><b>Probable cause:</b> A message with the indicator 'Emergency' or 'Critical' was detected in the WebLogic Server logfile.</p> <p>OR</p> <p>A message with the indicator 'Notice,' 'Error' or 'Alert' was detected in the WebLogic Server logfile.</p> <p><b>Suggested action:</b> Examine the error and use the WebLogic Server manuals or online help to determine the exact cause and action to take.</p>
