## WebInspect Enterprise 10.00 Features

### Single Sign-On

Users log on with their Software Security Center (SSC) credentials and they can navigate between WebInspect Enterprise and SSC without logging in again.

### Improved Installation Process

The Initializer wizard for installing the WebInspect Enterprise Server software has been clarified.

### Scan Visualization Enhancements

Scan visualization now includes the status of publishing the scan to SSC, the availability of SecurityScope, and the scan attachments (notes and screenshots).

### Comprehensive Scan Publishing Statuses

The set of available statuses for the publishing of a scan to SSC has been enhanced to include the status within SSC—Processing in SSC, Error Processing in SSC, and Processing Complete in SSC.

### Editing Scan Results While Scans Run

Users can edit the results of a scan while the scan is still running, for example by changing the status of vulnerabilities, adding attachments to them, marking them as false positives, or marking them to be ignored.

### Project Versions Automatically Imported from SSC into WebInspect Enterprise

When project versions are created or updated in SSC, they are automatically imported into WebInspect Enterprise. Users no longer need to import project versions manually.

### Importing Discovered Sites as Projects into SSC

The Web Discovery tool provided with WebInspect Enterprise can export the sites it discovers to a .csv file, and then WebInspect Enterprise can import that file as a set of projects into SSC.

### Initiating Scans from SSC

A new link in SSC allows users to initiate scans without switching to WebInspect Enterprise.

## **Viewing Scans from SSC**

A new link in SSC allows users to view scans without switching to WebInspect Enterprise.

## **Stack Traces Visible in WebInspect Enterprise**

If SecurityScope is detected, stack traces are available to view from within WebInspect Enterprise.

## **Use of Unified Web Macro Recorder**

WebInspect Enterprise now uses the latest (unified) Web Macro Recorder tool that was introduced in WebInspect version 10.00. This tool simplifies and improves the success of creating login macros. It uses event-based TruClient technology by default and significantly improves the automatic detection of logout conditions during macro recording, facilitating automatic login when logouts occur during scanning. In addition, it automatically switches to traffic-based macro recording if you observe that event-based macro recording is unsuccessful.

## **Getting Started**

For system requirements and instructions on installing and using WebInspect Enterprise, see the *WebInspect Enterprise User Guide*, accessible from **Start** → **All Programs** → **HP** → **HP WebInspect Enterprise 10.00** → **WebInspect Enterprise User Guide**.

## **Support**

For information or assistance regarding WebInspect Enterprise, contact customer support.

You can open a support case for WebInspect Enterprise via e-mail or by telephone. These options designed to provide easier access and improved customer satisfaction.

### **Email (Preferred Method)**

Send an e-mail to [fortifytechsupport@hp.com](mailto:fortifytechsupport@hp.com) describing your issue. Please include the product name so we can help you faster.

### **Online (Fortify Support Portal)**

Access your account at the Fortify Support Portal at <https://support.fortify.com>.

If you do not have an account, you forgot your username or password, or you need any assistance regarding your account, please contact us at [fortifytechsupport@hp.com](mailto:fortifytechsupport@hp.com) or (650) 735-2215.

### **Telephone**

Call our automated processing service at (650) 735-2215. Please clearly provide your name, telephone number, the name of the product, and a brief description of your issue.

## **Known Problems, Limitations and Workarounds**

HP advises against upgrading from WebInspect Enterprise version 9.30 to version 10.00. If you perform this upgrade, for any scan you publish again from WebInspect Enterprise version 10.00, issue IDs will not match between SSC and WebInspect Enterprise, so all the issues in a project version in SSC will be marked as resolved and re-created as new.

## **Legal Notices**

## **Copyright Notice**
