HP DevInspect for Java & HP DevInspect for .NET

[Addressee's Name
Addressee's Title
Company Name
Street Address
City, Postal Code
Country]

Dear HP Software Customer,

Hewlett-Packard (HP) is announcing the product discontinuance of HP DevInspect for Java & HP DevInspect for .NET, effective as of the dates set forth below.

This letter is being sent to the HP DevInspect for Java & HP DevInspect for .NET support customers worldwide, to inform you of our end of support plans.

End of Sale / End of Support

HP is committed to providing the highest level of customer care to you while you determine your future strategy for your HP DevInspect for Java & HP DevInspect for .NET products. Please read below for key timelines and support options that are now available to you:

Date	Program Activity
September 1, 2009	Product discontinuance announced
November 1, 2009	End of sale (no longer orderable or available for purchase)
August 31, 2011	End of Support

Please note that this product obsolescence does not offer a one for one migration to another product. HP's DevInspect shares technology with all of the other products in the BTO – Application Security Center. Our dynamic scanning engine is shared across all of the Center products. The key difference for DevInspect is the integration with the various IDEs. HP DevInspect for .NET runs within Microsoft Visual Studio and HP DevInspect for Java runs with Eclipse or Rational Application Developer.

Given the level of integration with specific developer tools, HP DevInspect was targeted at individual developers. HP's ongoing strategy is focused on selling our standalone security testing tool, Webspect, and our centralized security testing platform, HP Assessment Management Platform (AMP), in the development space as solutions for the entire development group rather than on a tool for individual developers.

HP has also partnered with Fortify, the market leader in static analysis security testing. This provides customers a solution combining the best static analysis security testing tool and the best dynamic security testing tool with the market leading test management platform or the market leading application security assessment management platform.

APPENDIX A: Definitions

This product version obsolescence is covered by version 4.2 of the support & obsolescence policy. Definitions of terms are provided by the HP Software product version obsolescence documented at: www.hp.com/go/hpsoftwaresupport/support-lifecycle

Product Support

Product Support is the reactive engagement of regional support resources (Support Center) and division support resources (Lab), in accordance with your purchased support plan, for the resolution of product defects, plus product enhancements for a specific product version. This includes investigation of newly reported defects and if appropriate, development of defect fixes and making these available for customers via patches. The HP Software product teams (Lab) will review and either approve or deny requests for defect fixes and enhancements (including additional support for newly-released operating system versions).

While HP Software investigates all problems and issues raised for products covered under Product Support, customers may be required to install the most current version or patches as part of the troubleshooting process.

Version Maturity may apply to specific versions of HP Software products. Version Maturity means that, for a specific product version, no further enhancements or changes to functionality are planned, nor are any further platform refreshes planned in order to update that product version to support current or future operating systems, operating system versions or hardware platforms.

End-of-Support Date

End-of-Support Date is the last date Software maintenance, installation and configuration assistance, and other standard support services will be accepted for the specified product release (as specified by Major and Minor version numbering). EOS also means the last date Software Change Requests (SCRs) will be accepted for a specified Version of a Product. After the EOS date, all SCRs will be planned for future versions, as applicable. Current patches for the version of the HP Software reaching EOS will remain available for electronic download for a reasonable period of time.
