Documentation Updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition of a document, go to: <http://h20230.www2.hp.com/selfsolve/manuals>

This site requires that you register for an HP Passport and sign in. To register for an HP Passport ID, go to: <http://h20229.www2.hp.com/passport-registration.html>

Or click the **New users - please register** link on the HP Passport login page.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your HP sales representative for details.

Support

Visit the HP Software Support Online web site at: <http://www.hp.com/go/hpsoftwaresupport>

This web site provides contact information and details about the products, services, and support that HP Software offers.

HP Software online support provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the support web site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Download software patches
- Manage support contracts
- Look up HP support contacts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

Most of the support areas require that you register as an HP Passport user and sign in. Many also require a support contract. To register for an HP Passport ID, go to:

<http://h20229.www2.hp.com/passport-registration.html>

To find more information about access levels, go to:

http://h20230.www2.hp.com/new_access_levels.jsp

HP Software Solutions Now accesses the HPSW Solution and Integration Portal Web site. This site enables you to explore HP Product Solutions to meet your business needs, includes a full list of Integrations between HP Products, as well as a listing of ITIL Processes. The URL for this Web site is <http://h20230.www2.hp.com/sc/solutions/index.jsp>

Chapter 1: Overview

This guide describes the HP Service Manager Applications Patch Manager and how to use it to update your applications to the latest applications release.

The HP Service Manager Applications Patch Manager enables you to keep your Service Manager applications up to date without going through a complete application upgrade. By adding incremental updates, you decrease the number of changes you will need to reconcile on your next application upgrade.

Applications patch releases include fixes and enhancements. Any changes required for those objects are described in the *HP Service Manager 9.34 Release Notes*.

This version of the Applications Patch Manager updates your HP Service Manager applications from version 9.30, or from a 9.30 patch level (1, 2, or 3), or from version 9.3x to the latest patch. After the patch is applied, the version of your HP Service Manager applications will be 9.34.0032. Before you can apply the applications patch, you must first install the required minimum patch version of the Service Manager 9.3x client and server. For instructions, see the *HP Service Manager Interactive Installation Guide*.

Topics in this section include:

- ["Applications Patch Manager requirements" below](#)
- ["Implementation Overview" on page 9](#)

Applications Patch Manager requirements

Be sure to meet the requirements before you try to apply or create an applications patch.

Required knowledge

You should be an experienced System Administrator who is familiar with your Service Manager installation.

You should be familiar with the following:

- How your existing Service Manager system operates
- How the application files function
- How to compare records
- The Rapid Application Development (RAD) environment

If you do not have the administrative experience necessary to apply the applications patch, you may need assistance from your local application developers and database administrators. You can also contact HP Customer Support.

Required tools

After applying an applications patch, it is necessary to reconcile any conflicts that are discovered by the Applications Patch Manager. The utilities you will use most when reconciling conflicts include:

- Database Manager
- Display application
- Forms Designer
- Merge Utility
- RAD Editor

Required software

Service Manager system requires the following prerequisites:

- Service Manager application release level: 9.3x (9.30, 9.30 Applications Patch, 9.31, 9.32, or 9.33)
- Service Manager application release language: All languages for 9.34
- Service Manager client/server release level: 9.34 or greater
- The Service Manager server process must have read-write access to the database.

For detailed information, see the release notes that came with the Application Patch.

Documentation resources

You may require access to the following Service Manager documentation.

- Service Manager 9.34 online Help for information about Database Manager, Display application, Forms Designer, Merge Utility, and the RAD Editor. You can access the online Help by using the HP Service Manager client or Help server.
- *Service Manager 9.34 Interactive Installation Guide*.
- *HP Service Manager 9.34 Release Notes* for information about Software Change Requests (SCRs), enhancements, and known issues. The release notes are part of the installation materials and are also available on the Customer Support Web site.

HP Customer Support Web site access

The HP Customer Support Web site has operating system and compatibility information, product documentation, and release notes. If you do not have an account for this Web site, contact HP Customer Support at: www.hp.com/go/hpssoftwaresupport.

Implementation Overview

Before you can apply the Applications patch, you must first upgrade the client and server to the required minimum patch version. Do not upload the 9.30 data files. Then apply the applications patch on a copy of your production system. The Applications Patch Manager installs new objects and determines whether previously existing objects are identical to the ones installed originally. If an existing object is unchanged from the original object for your existing version of HP Service Manager, the Applications Patch Manager replaces it with the new object. If the object on your system is different from the original for that version, the Applications Patch Manager leaves the old object untouched. The Applications Patch Manager also installs the new object and adds a prefix (NEW9.34.0032) to the name of the new version.

You can keep your old version, accept the new one, or merge the two versions. How much work this will require depends on whether the particular objects that this patch updates were tailored on your system, and on the specific differences that exist.

Note: Make sure that you back up the database of your production system before applying the production patch, because the only way to roll back your system after applying the production patch is to restore the database.

See the following figure for Applications Patch Manager process flows:

Chapter 2: Applying the Out-Of-Box Patch and Reconciling the Differences

Before you can update your tailored Service Manager system, you need to apply the out-of-box patch to a copy of that system, and then handle any objects the system could not update automatically.

This chapter explains what you need to do to apply the out-of-box patch and handle your tailored objects.

Topics in this section include:

- ["Setting up a copy of your production system" below](#)
- ["Applying the out-of-box patch" below](#)
- ["Reviewing the results" on page 13](#)
- ["Reconciling differences" on page 15](#)

Setting up a copy of your production system

In order to create the best possible production patch, create the patch on a system that replicates your production environment as closely as possible.

When setting up this system, be sure to incorporate the following:

- The same operating system version
- The same database version
- The same Service Manager client and server versions
- A copy of your production data

Applying the out-of-box patch

Once you have set up a copy of your production system, you must first upgrade the HP Service Manager client and server to the required minimum version. Do not upload the data files when installing the new server.

Follow these steps to apply the out-of-box patch to a copy of your production system:

1. For Unix:

- a. Navigate to the directory where applications-9.34.0032-patchrel.zip is located on the server.
- b. Uncompress applications-9.34.0032-patchrel.zip into the directory on the server where the production copy resides.

For Windows:

- a. Navigate to the directory where applications-9.34.0032-patchrel.msi is located on the server.
- b. Double-click applications-9.34.0032-patchrel.msi and follow the steps provided by the installer to install the patch.

Regardless of the operating system, the installation process creates the app_patchrel\SM9.30-9.34.0032 directory, which contains the files that make up the applications patch release. The created directory by default is C:\Program Files\HP\Service Manager 9.34\Applications\app_patchrel\SM9.30-9.34.0032.

2. Log in to your Service Manager server as a System Administrator.
3. On the Service Manager toolbar, select **Window > Preferences**.
4. Uncheck the **Client side load/unload** checkbox and click **OK**.
5. Go to **System Administration > Ongoing Maintenance > Patch Release** and select **Apply Patch Release**.
6. Enter the fully qualified path and file name to patchrel.unl in app_patchrel\SM9.30-9.34.0032, and then click **Next**.

The path must be relative to the server, instead of to the client computer, if the client is not installed on the same machine as the server.

The Applications Patch Manager displays the current version of your applications and the version that will result after you apply the patch.

7. Confirm that the source and target versions listed match your current production system and the applications patch version, and then click **Next** to apply the patch.

When the Applications Patch Manager finishes applying the patch, it displays a message indicating that your system was successfully updated.

8. Click **Finish**.

You will be disconnected from your Service Manager server.

Reviewing the results

After you apply the applications patch to your system, you will be able review the list of updated objects.

Follow these steps to review the results of the update:

1. Log in to your Service Manager server as a System Administrator.
2. Go to **System Administration > Ongoing Maintenance > Patch Release** and select **View/Merge Results**.

Service Manager displays the Applications Patch Results screen.

3. Enter optional search criteria, and then click **Search**.

Service Manager displays the results of your search. For more information, see ["Description of View/Merge results"](#) below.

4. Click a record in the list to review it.

Description of View/Merge results

The search criteria, search results, and a description of the applicable action for each result are described in the table below.

Patch Release Result fields and applicable actions for each result

Field	Definition
Object Name	Enter the name of the object you want to search for, or leave this field blank to return objects with any name. The object name is typically the unique identifier in the database table specified for the object type.
Object Type	Enter the type of object you want to search for, or leave this field blank to return all object types. Some of the object types you could search for are: Application Cluster, Object, Process, ScriptLibrary, displayoption, format, formatctrl, help, joindefs, link, scmmessage, screlconfig, triggers, validity, and wizard.
Result: Added	Select this option to search for new objects that were added to the system by the patch. These objects did not exist in your system before this update. For objects with this result, no further action is necessary.
Result: Error	Select this option to search for objects that encountered an error while being updated by the Applications Patch Manager. For more information about the error, review the <code>sm.log</code> file. Required Action: Fix the cause of the error in a copy of your production system, and then apply the patch again.

Patch Release Result fields and applicable actions for each result, continued

Field	Definition
Result: Forced	Select this option to search for objects that were tailored on your Service Manager system, where the Applications Patch Manager added the new object and backed up your tailored object as a revision. You will only see this result after applying the production patch. For objects with this result, no further action is necessary.
Result: Previously Reconciled	Select this option to search for objects that were tailored on your Service Manager system, that were marked as reconciled during a previous upgrade or patch release, or where your object was not changed and the Applications Patch Manager added a new object NEW9.34.0032<object name>. Required Action: Choose one of the following for each object with this result. • Keep the old version: No further action is necessary. • Keep the new version: Select the object in the merge view and click Copy all from left to right on the tool bar. • Merge new and old versions: Determine which of the new features should be incorporated into your tailored object, and then make the changes in your tailored object. When finished, delete the new object.
Result: Reconciled	Select this option to search for objects that you have already marked as Reconciled. For objects with this result, no further action is necessary.
Result: Renamed	Select this option to search for objects that were tailored on your Service Manager system, and where your object was not changed and the Applications Patch Manager added a new object NEW9.34.0032<object name>. You will only see this result after applying the out-of-box patch. Required Action: Choose one of the following for each object with this result. • Keep the old version: No further action is necessary. • Keep the new version: Select the object in the merge view and click Copy all from left to right on the tool bar. • Merge new and old versions: Determine which of the new features should be incorporated into your tailored object, and then make the changes in your tailored object. When finished, delete the new object.
Result: Updated	Select this option to search for objects that were automatically updated by the Applications Patch Manager. These are objects that were not tailored on your Service Manager system. For objects with this result, no further action is necessary.

Patch Release Result fields and applicable actions for each result, continued

Field	Definition
Result: Already Current	Select this option to search for objects that were already the latest version. For objects with this result, no further action is necessary.

Reconciling differences

The next step is to reconcile any differences between your tailored objects and the updated objects introduced by the applications patch.

Use the RAD Comparison Utility to assist in merging changes in RAD applications. For all other types of objects, you can use the standard Service Manager tools, or the Merge utility.

- ["Merging new objects with your tailored objects" below](#)
- ["Reconciling differences between RAD applications" on page 17](#)
- ["Reconciling differences between Content Pack and Applications Patch" on page 19](#)

Merging new objects with your tailored objects

After you have applied the out-of-box patch successfully, you are ready to reconcile the differences and merge the new objects with your tailored versions of the objects where necessary.

- Use the Merge utility to view and merge simple objects.
- Use the Merge utility to identify the changes necessary for records with complex data structures, such as formatctrl, joindefs, links, and structured arrays, but use the normal tool for tailoring these objects to integrate the necessary changes manually.

Caution: Avoid merging changes in XML records where there are instance nodes with record IDs (such as, recordid="svcCatalog"). Changes to instance nodes with record IDs can break the primary key for a record.

Follow these steps to use the Merge utility:

1. Log in to your Service Manager server as a System Administrator.
2. Go to **System Administration > Ongoing Maintenance > Patch Release** and select **View/Merge Results**.
3. Enter optional search criteria, and then click **Search**.

Service Manager displays the results of your search. For more information, see ["Description of View/Merge results" on page 13](#).

4. Open the record you wish to merge, right-click the detail page and then click **Merge** in the drop-down menu.

Service Manager displays both objects side-by-side in the Merge Applications Patch Records view.

Tip: The XML for the new object is shown on the left side, and the XML for your tailored object is shown on the right side with the differences highlighted.

5. For simple objects and elements, use the arrow buttons at the top of the pane to select individual changes and copy them from the new object over to your tailored object, or copy all changes from the new record to your tailored object. For complex objects, do the merge manually by using the appropriate tool for the object type.
6. Click **SAVE**.
7. Test the updated functionality of the merged object.
8. When you are satisfied that the object is working correctly, right-click the detail page and then click **Mark as Reconciled** in the drop-down menu.
9. Repeat this procedure for all changes that need to be merged.

Example of reconciling an object by using the Merge utility

For this example, before applying the patch, we tailored the displayoption record with a UniqueID of `notify_email` by adding some comments. After applying the out-of-box patch, the `notify_email` is one of the **Renamed** objects in the results list.

Follow these steps to merge the example form change:

1. Go to **System Administration > Ongoing Maintenance > Patch Release** and click **View/Merge Results**.

Service Manager displays the Applications Patch Results screen.

2. Specify `login.prompt.g` as the object name, and then click **Search**.
3. Right-click the detail page and then click **Merge** in the drop-down menu.

4. Service Manager displays both objects side-by-side in the Merge Applications Patch Records view.

After you compare the two forms, you decide to merge the new changes into your tailored form.

5. Use the arrow buttons at the top of the pane to select the change.

6. Click **Copy All from Left to Right** on the tool bar.
7. Click **SAVE**.
8. Log out from the Service Manager server, and then log in again.
9. Confirm that the updated label is displayed on login.
10. Go to **System Administration > Ongoing Maintenance > Patch Release** and click **View/Merge Results**.

Service Manager displays the Applications Patch Results screen.

11. Specify `login.prompt.g` as the object name, and then click **Search**.
12. Right-click the detail page and then click **Mark as Reconciled** in the drop-down menu.

Reconciling differences between RAD applications

Use these guidelines when reconciling differences between a tailored RAD application and the new one.

- If your company does not have a RAD license, you are not able to compare the two objects and merge the changes using the RAD Comparison Utility. However, you can automatically replace your tailored RAD application with the new one using the **Merge** option. For details, see ["Automatically replace Renamed RAD applications" below](#).
- If your company has a RAD license, use the RAD Comparison Utility to compare the objects and merge the changes.

Note: The codes for RAD applications for which "Current Release Level" is not marked as the current version "SM 9.34" (instead, it is still marked as the original version, "9.30" or "9.30.xxx"), are already current with the ones in Service Manager 9.34. Therefore, you should not change the "Current Release Level" field to "SM 9.34". There are two cases in which a RAD application's "Current Release Level" may be marked as "SM 9.34":

- The RAD applications which are new in Service Manager 9.34.
- The RAD applications whose code has been changed in Service Manager 9.34.

Automatically replace Renamed RAD applications

As of Service Manager 9.34, a **Merge** option is available for Renamed RAD applications. This option enables you to automatically replace your tailored RAD application with the new one.

Note: The option does not work if a Process Designer content pack is installed.

To use this option, perform the following steps:

1. Navigate to **System Administration > Ongoing Maintenance > Patch Release > View/Merge Results**.
2. Locate a Renamed RAD application through a search.
3. Click **More** or the More Actions icon and select **Merge**. Service Manager will automatically create a backup of the old object by renaming it OLD\$M9.3<object_name> and then rename the new object by removing the prefix NEW9.34.0032 from the object name. The result is then marked as "Reconciled."

Example of reconciling a RAD difference

For this example, we have tailored the RAD panel `approval.generate` by adding the expression `$L.rem="TAILORED VERSION"` to the start panel. After we apply the out-of-box patch, the `approval.generate` is one of the Renamed objects in the results list.

Follow these steps to merge the panels:

1. Open `approval.generate` (the tailored version) in the RAD Editor.
2. Click **More** or the More Actions icon and then select **Compare Applications**.
3. Enter `NEW9.34.0032approval.generate` in the field for New Application Name.
4. Click **Compare All** on the tool bar.
5. Make a note of the Unmatched and Deleted Panels (these are the panels that you would like to analyze when reconciling differences).

In this example, the start panel appears in the Unmatched Panels column.

6. On the current session, navigate to the Start panel.
7. On another session, open `NEW9.34.0032approval.generate`, and then navigate to the Start panel.
8. After you compare the two panels, you decide that you would like to keep your tailoring. Copy the tailored expression (`$L.rem="TAILORED VERSION"`) to the start panel of `NEW9.34.0032approval.generate`, then save and compile.
9. Delete your old tailored RAD application, and then rename `NEW9.34.0032approval.generate` to `approval.generate`.
10. Confirm the functionality of your change.
11. Go to **System Administration > Ongoing Maintenance > Patch Release** and click **View/Merge Results**.

Service Manager displays the Applications Patch Results screen.

12. Specify approval.generate as the object name, and then click **Search**.
13. Right-click the detail page and then click **Mark as Reconciled** in the drop-down menu.

Reconciling differences between Content Pack and Applications Patch

For instructions on how to reconcile differences between the released content packs and this applications patch, see the Service Manager 9.34 release notes.

Chapter 3: Creating and Applying the Production Patch

Once you have handled all objects requiring reconciliation, you will create a tailored production patch and apply it to your actual production system. This chapter explains what you need to do to create a production patch and apply it to your tailored production Service Manager system.

Topics in this section include:

- ["Creating the production patch" below](#)
- ["Testing the production patch" on the next page](#)
- ["Applying the production patch" on the next page](#)
- ["Going live after applying the production patch" on page 22](#)

Creating the production patch

Once you are satisfied with the results of your reconciliation process, you can create a production patch.

Note: It is recommended that you back up your database after reconciling differences to prevent unexpected data loss.

Follow these steps to create the production patch:

1. Log in to your Service Manager server as a System Administrator.
2. Go to **System Administration > Ongoing Maintenance > Patch Release** and select **Create Patch Release**.

The Applications Patch Manager asks you to prepare an area to contain the applications patch files that you will create. This can be referred to as the production patch directory.

- a. Using the standard method for your operating system, create the production patch directory.
- b. Copy the file `patchrel.txt` from the `app_patchrel\SM9.30-9.34.0032` directory where you unzipped the out-of-box patch release to the production patch directory.
- c. Enter the fully qualified path and file name to `patchrel.txt` in the production patch directory. This path must point to a location that the server can access.

3. Click **Next**.

The Applications Patch Manager displays the version you will create the patch for.

4. Click **Next** to create the patch.

The Applications Patch Manager creates the production patch in the Applications Patch Manager production patch directory.

After you test this patch and confirm that it works as desired, you will be able to apply it to your production system.

Testing the production patch

After creating the applications patch for your production system, test it extensively. This will be an iterative process that may require several changes to patch objects and the recreation of production patches. Employ user acceptance testing verification and validate your changes.

Applying the production patch

The steps that you used to apply the out-of-box patch to the copy of your production system are the same steps you need to apply to the production patch that you created in your actual production system.

Note: When applying the patch to the production system, you must be the only user logged in to the system.

Follow these steps to apply the patch you created to your production system:

1. Have all users log out of the server.
2. Prevent users from logging into your Service Manager server by running the quiesce command from the operating system's command prompt.

```
sm -quiesce:1
```

3. Log in to your Service Manager server as a System Administrator.
4. Go to **System Administration > Ongoing Maintenance > Patch Release** and select **Apply Patch Release**.
Service Manager displays a screen that asks you to find a file called `patchrel.unl`.
5. Enter the fully qualified path and file name to `patchrel.unl` in the production patch directory, and then click **Next**. The path must be relative to the server, instead of to the client computer, if the client is not installed on the same machine as the server.

The Applications Patch Manager displays the current version of your applications and the version that will result after you apply the patch.

6. Confirm that the source and target versions listed match your current production system and the applications patch version, and then click **Next** to apply the patch.

When the Applications Patch Manager finishes applying the patch, it displays a message indicating that your system was successfully updated.

7. Click **Finish**.
8. Log out from your Service Manager server, and then log in again.
9. Allow users to log in to the server by running the quiesce command from the operating system's command prompt.

```
sm -quiesce:0
```

Going live after applying the production patch

Any tailored objects that were updated by the application patch are backed up as a revision. If issues are encountered after going live, these objects can be quickly swapped back to their original tailored versions. After a period of time, you may want to delete the old revision objects.

Appendix: List of objects added or updated by the 9.34 Applications Patch Release

This appendix lists the objects that have been added or updated since the Service Manager 9.30 applications patch release until the Service Manager 9.34 applications patch release.

Note: Each table lists only the objects added or updated in the specific release, compared to the previous release. In other words, each table is noncumulative. For example, the Service Manager 9.34 table lists only the objects added or updated in version 9.34, compared to the previous version, 9.33.

Added or updated objects in Service Manager 9.34

The following table lists the objects that are either added or updated with the Service Manager 9.34 applications patch release.

Added or updated objects in SM9.34 (Part 1)

Object Type	Object Name	Result
Application Cluster	apm.global.initer	Updated
Application Cluster	apm.make.signatures	Updated
Application Cluster	apm.make.signatures.byname	Updated
Application Cluster	apm.save.problem	Updated
Application Cluster	apm.upgrade.build.apps	Updated
Application Cluster	apm.upgrade.build.format	Updated
Application Cluster	apm.upgrade.build.other	Updated
Application Cluster	apm.upgrade.build.simple	Updated
Application Cluster	apm.upgrade.check.lang	Updated
Application Cluster	apm.upgrade.chooseupg.rad	Added
Application Cluster	apm.upgrade.convert.preSM7	Updated
Application Cluster	apm.upgrade.convert.preSM71	Updated
Application Cluster	apm.upgrade.convert.preSM920	Updated

Added or updated objects in SM9.34 (Part 1), continued

Object Type	Object Name	Result
Application Cluster	apm.upgrade.convert.preSM930	Updated
Application Cluster	apm.upgrade.create	Updated
Application Cluster	apm.upgrade.currency	Updated
Application Cluster	apm.upgrade.data	Updated
Application Cluster	apm.upgrade.dbdict	Updated
Application Cluster	apm.upgrade.display	Updated
Application Cluster	apm.upgrade.export	Updated
Application Cluster	apm.upgrade.import	Updated
Application Cluster	apm.upgrade.load.objects	Updated
Application Cluster	apm.upgrade.load.transfer	Updated
Application Cluster	apm.upgrade.log	Updated
Application Cluster	apm.upgrade.prep.priority	Updated
Application Cluster	apm.upgrade.prep.sev.code	Updated
Application Cluster	apm.upgrade.purge	Updated
Application Cluster	apm.upgrade.purge.nonEngPrmFmt	Updated
Application Cluster	apm.upgrade.revert.rad	Added
Application Cluster	apm.upgrade.revision.create	Added
Application Cluster	apm.upgrade.revision.create.rad	Added

Added or updated objects in SM9.34 (Part 1), continued

Object Type	Object Name	Result
Application Cluster	apm.upgrade.revision.new.dbdict	Added
Application Cluster	apm.upgrade.sqlsys	Updated
Application Cluster	apm.upgrade.wizard	Updated
Application Cluster	apm.upgrade.wizard.dbdict	Updated
Application Cluster	apm.upgrade.wizard.lang	Updated
Application Cluster	apm.upgrade.write.file	Updated
Application Cluster	approval.mass	Updated
Application Cluster	audit.lookup	Updated
Application Cluster	cc.save.incident	Updated
Application Cluster	cc.set.item.approval	Updated
Application Cluster	cm.deny.dataModEvent	Updated
Application Cluster	cm.open	Updated
Application Cluster	cm.update.save	Updated
Application Cluster	cm3.query.build	Updated
Application Cluster	db.environment	Updated
