

# AI Alert: POODLE: SSLv3 Vulnerability

---

(September 10, 2015)

**ACTION:** Update AI core with the documented instruction.  
The information in this alert should be acted upon right away.

Issue that Requires Attention .....2  
Impact on AI .....2  
Immediate Mitigation.....2

## Change Table for this Document

Date	Change
<b>Oct 27, 2014</b>	Initial Release
<b>Sep 10, 2015</b>	1. Added AI Database- Vertica Mitigation steps 2. Changed the File name for this bulletin

## Issue that Requires Attention

SSLv3 exposes vulnerability: [CVE-2014-3566](#)

The Poodle attack is a MITM (Man in the Middle) vector that allows an attacker to force a protocol downgrade between a client and server. This means both the client and the server must be able to communicate with this downgraded protocol.

## Impact on AI

### General

The AI Core is the platform management center for an AI system. It has an Apache HTTP Server shielding the Services on the core.

Communication occurs through this HTTP server gateway. The HTTP server receives packets on port 4443 from web UI requests, REST API calls and data miners that interact with AI core. Port 4443 also accepts SSLv3 packets.

HP AI database -Vertica 6.1.3 running SSLv3 is found to be vulnerable.

## Immediate Mitigation

### Remove SSLv3 from the HTTP Server configuration

#### AI Core

1. Modify the HTTP server (gateway) configuration file:

**/etc/opt/HP/CBI/http/extra/httpd-ssl.conf**

Change the SSLProtocol property (Line 90) to remove support for SSLv3 protocol

Sample **httpd-ssl.conf** entry:

```
# SSL Protocol support:
```

```
# List the protocol versions which clients are allowed to
```

```
# connect with. Disable SSLv2 by default (cf. RFC 6176).
```

```
SSLProtocol all -SSLv2
```

In the above property configuration append the string -SSLv3

The updated configuration should look like the following:

```
# SSL Protocol support:
```

```
# List the protocol versions which clients are allowed to
```

```
# connect with. Disable SSLv2 by default (cf. RFC 6176).
```

SSLProtocol all -SSLv2 -SSLv3

2. Restart the Gateway service on the AI core:

```
# /etc/init.d/cbid restart gateway
```

### **AI Database- Vertica Core**

HP AI recommends installing/Upgrading to Vertica v7.1.2-1 or subsequent. Instructions for downloading and installing/upgrading Vertica 7.1.2-x are available at SSO

1. Logon to SSO Portal using HP Passport credentials.
2. Download the **AI\_00001.zip** Patch.
3. The Vertica 7.1.2-x package and instructions document to upgrade is uploaded to SSO-AI\_00001.zip for downloads.
4. It's available at [ftp://quixy.deu.hp.com/mv\\_patches/AI/AI\\_00001.zip](ftp://quixy.deu.hp.com/mv_patches/AI/AI_00001.zip).
5. The patch is also available on the SSO Portal at: [https://softwaresupport.hp.com/group/softwaresupport/search-result/-/facetsearch/document/LID/AI\\_00001](https://softwaresupport.hp.com/group/softwaresupport/search-result/-/facetsearch/document/LID/AI_00001)
