Introduction

This white paper describes the integration of ArcSight Logger with HP Cloud Service Automation. Because HP Cloud Service Automation interacts with multiple datacenter management and automation products, each product must be configured to complete the integration. Step-by-step instructions for each product are provided to easily guide you through the configuration. As a result, you will be able to view all the log events generated by different products on a single dashboard in ArcSight Logger.

HP Operations Orchestration, HP SiteScope, HP Universal CMDB, and HP Matrix Operating Environment are integrated with HP Cloud Service Automation. Each of these products has its own logging mechanism. To troubleshoot in such a complex environment, you would have to log in to each server and check the respective product log file, which is a tedious and time consuming process. Hence, there is a need for an integrated view of all the product logs. This can be achieved by integrating HP Cloud Service Automation with ArcSight Logger. The log events from each product can be sent and stored in ArcSight Logger, facilitating search and further analysis. Log events across products can be displayed in a single view, which significantly reduces troubleshooting effort.

This implementation is designed for an audience that has working knowledge and hands-on experience with HP Cloud Service Automation, HP Matrix Operating Environment HP SiteScope HP Operations Orchestration, and HP Universal CMDB. You must understand the core concepts and have demonstrated proficiency with these products discussed. Others may benefit from this document, but many background details found in other HP documentation are omitted. The [References](#) section includes additional information that might be helpful to those who need it.

About ArcSight Logger

ArcSight Logger is the first Universal Log Management solution that unifies searching, reporting, alerting, and analysis across any type of enterprise log data, making it unique in its ability to collect, analyze, and store massive amounts of data generated by modern networks. It supports multiple deployment options and can be deployed as an appliance and as software.

About Log4j Appender

Log4j Appender is a tool that integrates the ArcSight Logger with any product that uses Log4j utility for logging. Integration is done by altering the log4j.properties file of the specific product rather than modifying the application code. The Log4j utility forwards the product logs to the Log4j Appender, which in turn sends it to ArcSight Logger. ArcSight Logger indexes and performs search analysis on these log events.

Assumptions

This implementation requires that the HP CloudSystem Enterprise environment is installed, configured, and functioning correctly. Each component must be verified to work alone and as an integrated HP CloudSystem Enterprise environment. The major components include the following:

- HP Cloud Service Automation (HP CSA)
- HP Operations Orchestration (HP OO)
- HP SiteScope
- HP Matrix Operating Environment (HP MOE)
- HP Universal CMDB

Links to the documents that provide information for installing, configuring, and verifying these components and their interoperability are found in the [References](#) section. Supported versions can be found in the *HP Cloud Service Automation Support Matrix*.

Limitations of the free version

ArcSight Logger is available as free downloadable software that brings true enterprise-class log management functionality to everyone. You can download, install, and start getting instant value out of their logs within minutes. Using the free version, you can collect up to 750 MB of log data per day and store up to 500 GB of uncompressed logs (assuming average compression 10:1). The free version also comes with 90 days of phone and email support, followed by access to the ArcSight Logger user community.

As shown below, the downloadable version of ArcSight Logger provides access to all enterprise features for a full 12 months.

In order not to exceed the daily limit of the logger, it is highly recommended that you adhere to the default log levels provided in the log4.properties file for all the products. You can contact HP Support for further assistance with changing log levels.

Installation and configuration

The major steps required to integrate ArcSight Logger with HP Cloud Service Automation include the following:

- Installing and Configuring ArcSight Logger
- Configuring HP Cloud Service Automation
- Configuring HP SiteScope
- Configuring HP Operations Orchestration
- Configuring HP Universal Configuration Management Database
- Configuring HP Matrix Operating Environment
- Searching for events in the ArcSight Logger portal

Installing and configuring ArcSight Logger

The free version of ArcSight Logger is included on the HP Cloud Service Automation product media. It is also available for download from the following URL:

<http://www8.hp.com/us/en/software-solutions/arcsight-logger-log-management/>

ArcSight logger is supported on the following platforms:

- Red Hat Enterprise Linux, version 5.4, 64-bit
- Oracle Enterprise Linux, version 5.4, 64-bit
- CentOS, version 5.4, 64-bit

Prerequisites for ArcSight logger are:

- CPU: 1 or 2 x Intel Xeon Quad Core or equivalent
- Memory: 4–12 GB
- Disk Space: 100–120 GB

Follow the instructions provided in **Section 2: Installing the Software Version of Logger** in the *ArcSight Logger Administrator's Guide*, which is available in the HP Cloud Service Automation media.

Configuring HP Cloud Service Automation

To configure HP Cloud Service Automation, complete the steps in the following sub-procedures in the order presented.

Basic HP CSA ArcSight Logger Configuration

1. Log in to the HP Cloud Service Automation server.
2. Open `log4j.properties`, which is in `C:\Program Files\Hewlett-Packard\CSA\jboss-as\standalone\deployments\csa.war\WEB-INF\classes`.
3. In `log4j.properties`, uncomment the following lines:

```
#log4j.rootLogger=ERROR, C, fileappender, cef1
#log4j.logger.com.hp.csa.ui.vaadin=ERROR,fileappender, cef1
```
4. By default, the log level is set to `ERROR`, so only error logs will be generated and transferred to ArcSightLogger. If detailed logs are required, then change the log level to `INFO` for `rootLogger` as follows:

```
log4j.rootLogger=INFO, C, fileappender, cef1
```
5. In `log4j.properties`, comment out the following lines:

```
log4j.logger.com.hp.csa.ui.vaadin=ERROR,fileappender
log4j.rootLogger=ERROR, C, fileappender
log4j.appender.cef1.appender.threshold=off
```
6. In `log4j.properties`, change the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
log4j.appender.cef1.hostName=192.x.x.x
log4j.appender.cef1.port=515
```

The logs sent to `C:\Program Files\Hewlett-Packard\CSA\jboss-as\standalone\log\csa.log` by HP Cloud Service Automation will now be transferred to ArcSight Logger.
7. Open `csa.properties` from `C:\Program Files\Hewlett-Packard\CSA\jboss-as\standalone\deployment\csa.war\WEB-INF\classes`.
8. In `csa.properties` change the line `loggerEnabled=false` to `loggerEnabled=true`
9. Restart the HP Cloud Service Automation service from the service manager.
10. Verify that the ArcSight Logger has been integrated correctly with HP Cloud Service Automation by:
 - a. Open the logger portal URL: `https://<loggerHostname>:<logger port>/`.
 - b. In the Summary tab, check that the IP address of the HP Cloud Service Automation server appears in the Devices tab.
 - c. Check that the HP Cloud Service Automation IP address is in the Devices tab.
 - d. Check that the events are shown in the search screen.

Integration of HP CSA Core Logs with the ArcSight Logger

1. Add following content to the `log4j.properties` file:

```
#Update Start
log4j.appender.coreArcsightAppender=com.hp.esp.arcsight.cef.appender.Log4jAppender
log4j.appender.coreArcsightAppender.deviceVendor=HP
log4j.appender.coreArcsightAppender.deviceProduct=CSA
log4j.appender.coreArcsightAppender.deviceVersion=4.2
log4j.appender.coreArcsightAppender.transportType=SYSLOG
log4j.appender.coreArcsightAppender.hostName=192.x.x.x
log4j.appender.coreArcsightAppender.port=515
```

```
log4j.appender.coreArcsightAppender.layout=org.apache.log4j.PatternLayout
log4j.appender.coreArcsightAppender.layout.ConversionPattern=%d [%t] %-5p %c %x - %m%n
log4j.appender.coreArcsightAppender.useCefHeader=true
log4j.appender.coreArcsightAppender.eventName=CORE
#Update End
```

2. Modify the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
log4j.appender.coreArcsightAppender.hostName=192.x.x.x
log4j.appender.coreArcsightAppender.port=515
```

3. Append “, fileappender,coreArcsightAppender” to the end of the existing log4j.rootlogger property in the log4j.properties file.

Integration of CCUE Logs with the ArcSight Logger

1. Add following content to the log4j.properties file:

```
#Update Start

log4j.appender.ccueArcsightAppender=com.hp.esp.arcsight.cef.appender.Log4jAppender
log4j.appender.ccueArcsightAppender.deviceVendor=HP
log4j.appender.ccueArcsightAppender.deviceProduct=CSA
log4j.appender.ccueArcsightAppender.deviceVersion=4.2
log4j.appender.ccueArcsightAppender.transportType=SYSLOG
log4j.appender.ccueArcsightAppender.hostName=192.x.x.x
log4j.appender.ccueArcsightAppender.port=515
log4j.appender.ccueArcsightAppender.layout=org.apache.log4j.PatternLayout
log4j.appender.ccueArcsightAppender.layout.ConversionPattern=%d [%t] %-5p %c %x - %m%n
log4j.appender.ccueArcsightAppender.eventName=CCUE
log4j.appender.ccueArcsightAppender.useCefHeader=true
#Update End
```

2. Modify the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
log4j.appender.ccueArcsightAppender.hostName=192.x.x.x
log4j.appender.ccueArcsightAppender.port=515
```

3. Uncomment the log4j.logger.com.hp.ccue.csa property in the log4j.properties file, and append it with “, ccueArcsightAppender”, so it appears as follows:

```
log4j.logger.com.hp.ccue.csa=ERROR, ccue, ccueArcsightAppender
```

4. Append “, ccue,ccueArcsightAppender” to the end of the existing log4j.rootlogger property in the log4j.properties file.

Integration of Marketplace Portal Logs with the ArcSight Logger

1. Add following content to the log4j.properties file:

```
#Update Start

log4j.appender.mppArcsightAppender=com.hp.esp.arcsight.cef.appender.Log4jAppender
log4j.appender.mppArcsightAppender.deviceVendor=HP
log4j.appender.mppArcsightAppender.deviceProduct=CSA
log4j.appender.mppArcsightAppender.deviceVersion=4.2
log4j.appender.mppArcsightAppender.transportType=SYSLOG
log4j.appender.mppArcsightAppender.hostName=192.x.x.x
```

```

log4j.appender.mppArcsightAppender.port=515
log4j.appender.mppArcsightAppender.layout=org.apache.log4j.PatternLayout
log4j.appender.mppArcsightAppender.layout.ConversionPattern=%d [%t] %-5p %c %x - %m%n
log4j.appender.mppArcsightAppender.eventName=MPP
log4j.appender.mppArcsightAppender.useCefHeader=true
#Update End

```

2. Modify the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```

log4j.appender.mppArcsightAppender.hostName=192.x.x.x
log4j.appender.mppArcsightAppender.port=515

```

3. Uncomment the `log4j.logger.com.hp.ccue.mpp` property in the `log4j.properties` file, and append it with “, mppArcsightAppender”, so it appears as follows:

```

log4j.logger.com.hp.ccue.mpp=ERROR, mpp, mppArcsightAppender

```

4. Append “, mpp,mppArcsightAppender” to the end of the existing `log4j.rootlogger` property in the `log4j.properties` file.

Integration of the Designer Logs with the ArcSight Logger

1. Add following content to the `log4j.properties` file:

```

#Update Start

log4j.appender.designerArcsightAppender=com.hp.esp.arcsight.cef.appender.Log4jAppender
log4j.appender.designerArcsightAppender.deviceVendor=HP
log4j.appender.designerArcsightAppender.deviceProduct=CSA
log4j.appender.designerArcsightAppender.deviceVersion=4.2
log4j.appender.designerArcsightAppender.transportType=SYSLOG
log4j.appender.designerArcsightAppender.hostName=192.x.x.x
log4j.appender.designerArcsightAppender.port=515
log4j.appender.designerArcsightAppender.layout=org.apache.log4j.PatternLayout
log4j.appender.designerArcsightAppender.layout.ConversionPattern=%d [%t] %-5p %c %x - %m%n
log4j.appender.designerArcsightAppender.eventName=DESIGNER
log4j.appender.designerArcsightAppender.useCefHeader=true
#Update End

```

2. Modify the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```

log4j.appender.designerArcsightAppender.hostName=192.x.x.x
log4j.appender.designerArcsightAppender.port=515

```

3. Uncomment the `log4j.logger.com.hp.ccue.designer` property in the `log4j.properties` file, and append it with “, designerArcsightAppender”, so it appears as follows:

```

log4j.logger.com.hp.ccue.designer=ERROR, designer, designerArcsightAppender

```

4. Append “, designer,designerArcsightAppender” to the end of the existing `log4j.rootlogger` property in the `log4j.properties` file.

Configuring HP SiteScope

To configure HP SiteScope, complete the following steps:

1. Log in to the HP SiteScope server.

2. Copy the Log4j Appender jar file named `arcsight-cef-library-1.0.0.release.8.jar`, which is available in the HP Cloud Service Automation media, to the `C:\SiteScope\WEB-INF\lib` directory on the HP SiteScope server.
3. Open `log4j.properties` from
`C:\SiteScope\conf\core\Tools\log4j\PlainJava\log4j.properties`.
4. Replace the contents of `log4j.properties` with the contents provided in [Appendix A](#).
5. In `log4j.properties`, change the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
log4j.appender.cef1.hostName=192.x.x.x
log4j.appender.cef1.port=515
```
6. Restart the SiteScope service from the service manager.
The logs that are sent to `C:\SiteScope\logs\RunMonitor.log` and `C:\SiteScope\logs\error.log` by HP SiteScope are also sent to the ArcSight Logger.
7. Verify that the ArcSight Logger has been integrated correctly with HP SiteScope:
 - a. Open the logger portal at `https://<loggerHostname>:<logger port>/`.
 - b. Select the Summary tab and check that the IP address of the HP SiteScope server appears in the Devices tab.
 - c. Click the HP SiteScope server IP address in the Devices tab.
 - d. Check that the events are shown in the search list.

Configuring HP Operations Orchestration (pre-10.x versions)

To configure HP Operations Orchestration versions prior to version 10.x, complete the following steps:

1. Copy the Log4j Appender jar file named `arcsight-cef-library-1.0.0.release.8.jar`, which is available in the HP Cloud Service Automation media, to the following directories on the HP Operations Orchestration server:

```
C:\Program Files\Hewlett-Packard\Operations
Orchestration\RAS\Java\Default\webapp\WEB-INF\lib
C:\Program Files\Hewlett-Packard\Operations Orchestration\jetty\lib
```
2. Copy `log4j-1.2.8.jar` from `C:\Program Files\Hewlett-Packard\Operations Orchestration\RAS\Java\Default\webapp\WEB-INF\lib` to `C:\Program Files\Hewlett-Packard\Operations Orchestration\jetty\lib`.
3. Go to the following locations:

```
C:\Program Files\Hewlett-Packard\Operations
Orchestration\RAS\Java\Default\webapp\conf
C:\Program Files\Hewlett-Packard\Operations Orchestration\jetty\resources
```
4. Replace the contents of the `log4j.properties` files with the content provided in [Appendix B](#) for the corresponding HP Operations Orchestration version.
5. In the `log4j.properties` files, change the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
log4j.appender.cef1.hostName=192.x.x.x
log4j.appender.cef1.port=515
```
6. Restart the RSCentral and RSJRAS services from the service manager.
The logs sent to `${iconclude_home}\Central\logs\CentralWrapper.log` and `${iconclude_home}\RAS\Java\Default\webapp\logs\iconcludeJRAS.log` by HP Operations Orchestration are also sent to ArcSight Logger.

7. Verify that ArcSight Logger has been integrated correctly with HP Operations Orchestration:
 - a. Open the logger portal at `https://<loggerHostname>:<logger port>/`.
 - b. Select the Summary tab and check that the IP address of the HP Operations Orchestration server appears in the Devices tab.
 - c. Click the HP Operations Orchestration server IP address in the Devices tab.
 - d. Check that the events are shown in the search screen.

Configuring HP Operations Orchestration (version 10.x)

To configure HP Operations Orchestration version 10.x, complete the following steps:

1. Copy the jar file named `arcsight-cef-library-1.0.0.release.8.jar`, which is available in the HP Cloud Service Automation media, to the following directories on the HP Operations Orchestration server:

```
C:\Program Files\Hewlett-Packard\Operations Orchestration\Central\lib
C:\Program Files\Hewlett-Packard\Operations Orchestration\Central\tomcat\lib
```

2. Add following content to the `log4j.properties` file that is in the `C:\Program Files\Hewlett-Packard\Operations Orchestration\Central\conf` directory:

```
#Update Start

log4j.appender.arcsightAppender=com.hp.esp.arcsight.cef.appender.Log4jAppender
log4j.appender.arcsightAppender.deviceVendor=HP
log4j.appender.arcsightAppender.deviceProduct=CSA
log4j.appender.arcsightAppender.deviceVersion=4.2
log4j.appender.arcsightAppender.transportType=SYSLOG
log4j.appender.arcsightAppender.hostName=192.x.x.x
log4j.appender.arcsightAppender.port=515
log4j.appender.arcsightAppender.layout=org.apache.log4j.PatternLayout
log4j.appender.arcsightAppender.layout.ConversionPattern=%d [%t] %-5p %c %x - %m%n
log4j.appender.arcsightAppender.eventName=OO_EVENT
log4j.appender.arcsightAppender.useCefHeader=true

#Update End
```

3. Modify the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
log4j.appender.ArcsightAppender.hostName=192.x.x.x
log4j.appender.ArcsightAppender.port=515
```

4. Uncomment as necessary and append “, arcsightAppender” to the end of the existing

```
log4j.rootlogger, log4j.logger.com.hp.oo, and log4j.logger.com.hp.oo.execution
properties in the log4j.properties file so that they appear as follows.
log4j.rootLogger=WARN, general.appender, arcsightAppender
log4j.logger.com.hp.oo= server.appender, arcsightAppender
log4j.logger.com.hp.oo.execution=execution.appender, arcsightAppender
```

Configuring HP Universal CMDB

To configure HP Universal CMDB, complete the following steps:

1. Copy the Log4j Appender jar file named `arcsight-cef-library-1.0.0.release.8.jar`, which is available in the HP Cloud Service Automation media, to the `C:\hp\UCMDB\UCMDBServer\lib` directory on the HP Operations Orchestration server.

2. Open the `log4j.properties` named as `root.properties` file from `C:\hp\UCMDB\UCMDBServer\conf\log\root\root.properties`.
3. Replace the contents of `root.properties` with the contents provided in [Appendix C](#).
4. In `root.properties`, change the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
log4j.appender.cef1.hostName=192.x.x.x
log4j.appender.cef1.port=515
```
5. Restart the UCMDB Server, UCMDB_Probe_DB, and UCMDB Probe services from the service manager.

The logs sent to `C:\hp\UCMDB\UCMDBServer\runtime\log\error.log` by HP Universal CMDB are also sent to the ArcSight Logger.
6. Verify that the ArcSight Logger has been integrated correctly with HP Universal CMDB:
 - a. Open the logger portal at `https://<loggerHostname>:<logger port>/`.
 - b. Select the Summary tab and check that the IP address of the HP Universal CMDB server appears in the Devices tab.
 - c. Click the HP UCMDB server IP address in the Devices tab.
 - d. Check that the events are shown in the search screen.

Configuring the Identity Management Service (IdM)

To integrate the IdM logs with the ArcSight Logger, complete the following steps:

1. Copy the jar file named `arcsight-cef-library-1.0.0.release.8.jar`, which is available in the HP Cloud Service Automation media, to the following directory on the HP CSA server:

```
C:\Program Files\Hewlett-Packard\CSA\jboss-as\standalone\deployments\idm-service.war\WEB-INF\lib
```
2. Add following content to the `log4j.properties` file that is in the `C:\Program Files\Hewlett-Packard\CSA\jboss-as\standalone\deployments\idm-service.war\WEB-INF\classes` directory:

```
#Update Start

log4j.appender.arcsightAppender=com.hp.esp.arcsight.cef.appender.Log4jAppender
log4j.appender.arcsightAppender.deviceVendor=HP
log4j.appender.arcsightAppender.deviceProduct=CSA
log4j.appender.arcsightAppender.deviceVersion=4.2
log4j.appender.arcsightAppender.transportType=SYSLOG
log4j.appender.arcsightAppender.hostName=192.x.x.x
log4j.appender.arcsightAppender.port=515
log4j.appender.arcsightAppender.layout=org.apache.log4j.PatternLayout
log4j.appender.arcsightAppender.layout.ConversionPattern=%d [%t] %-5p %c %x - %m%n
log4j.appender.arcsightAppender.eventName=IDM
log4j.appender.arcsightAppender.useCefHeader=true

#Update End
```
3. Modify the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
log4j.appender.arcsightAppender.hostName=192.x.x.x
log4j.appender.arcsightAppender.port=515
```
4. Append `", arcsightAppender"` to the end of the existing `log4j.rootlogger` property in the `log4j.properties` file.

Configuring HP Matrix operating environment

To configure HP MOE, complete the following steps:

1. Copy the Log4j Appender jar file named `arcsight-cef-library-1.0.0.release.8.jar`, which is available in the HP Cloud Service Automation media) to the `C:\Program Files\HP\Matrix infrastructure orchestration\lib` directory on the HP MOE server.
2. Open `log4j.properties` from `C:\Program Files\HP\Matrix infrastructure orchestration\conf`.
3. Replace the contents of `log4j.properties` with the content provided in [Appendix D](#).
4. In `log4j.properties`, change the following properties to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
log4j.appender.cef1.hostName=192.x.x.x
log4j.appender.cef1.port=515
```
5. Restart the HP Matrix infrastructure orchestration service from the service manager.
The logs sent to `C:\Program Files\HP\Matrix infrastructure orchestration\logs\hpio.log` and `C:\Program Files\HP\Matrix infrastructure orchestration\logs\hpio-controller.log` by the Insight Orchestration application are also sent to the ArcSight Logger.
6. Verify that the ArcSight Logger has been integrated correctly with HP MOE:
 - a. Open the logger portal URL: `https://<loggerHostname>:<logger port>/`.
 - b. In the **Summary** tab, check that the IP address of the HP MOE server appears in the **Devices** tab.
 - c. Click the HP MOE server IP address in the **Devices** tab.
 - d. Check that the events are shown in the search screen.

Configuring HP Helion OpenStack®

To integrate the HP Helion OpenStack designer logs with the ArcSight Logger, complete the following steps:

1. Copy the jar file named `arcsight-cef-library-1.0.0.release.8.jar`, which is available in the HP Cloud Service Automation media, to the following directory on the HP Helion OpenStack server:
`\var\lib\designer\webapps\designer\WEB-INF\lib\`
2. Add following content to the `log4j.xml` file that is in the `\var\lib\designer\webapps\designer\WEB-INF\classes` directory:

```
<!-- Update Start -->
<appender name="ARCSIGHT" class="com.hp.esp.arcsight.cef.appender.Log4jAppender">
  <param name="deviceVendor" value="HP"/>
  <param name="deviceProduct" value="CSA"/>
  <param name="deviceVersion" value="4.2"/>
  <param name="transportType" value="SYSLOG"/>
  <param name="hostName" value="192.x.x.x"/>
  <param name="port" value="515"/>
  <param name="eventName" value="CLOUD_OS"/>
  <param name="useCefHeader" value="true"/>
  <layout class="org.apache.log4j.PatternLayout">
    <param name="ConversionPattern" value="%d [%t] %-5p %c %x - %m%n"/>
  </layout>
</appender>
```

```
<!-- Update End -->
```

3. Modify the values of the following parameters to match the IP address of the ArcSight Logger and the UDP port on the ArcSight Logger portal:

```
<param name="hostName" value="192.x.x.x"/>
```

```
<param name="port" value="515"/>
```

4. Add the ArcSight appender to the com.hp.ccue, org.springframework, and root loggers in the log4j.xml file. After this information has been added, the portion of the file affected by the change will appear as follows, with the added information shown in bold font below:

```
<logger name="com.hp.ccue" additivity="false">
```

```
    <level value="error"/>
```

```
    <appender-ref ref="FILE"/>
```

```
    <appender-ref ref="CONSOLE"/>
```

```
    <appender-ref ref="ARCSIGHT"/>
```

```
</logger>
```

```
<logger name="org.springframework" additivity="false">
```

```
    <level value="info"/>
```

```
    <appender-ref ref="FILE"/>
```

```
    <appender-ref ref="CONSOLE"/>
```

```
    <appender-ref ref="ARCSIGHT"/>
```

```
</logger>
```

```
<root>
```

```
    <level value="warn"/>
```

```
    <appender-ref ref="CONSOLE"/>
```

```
    <appender-ref ref="FILE"/>
```

```
    <appender-ref ref="ARCSIGHT"/>
```

```
</root>
```

5. Run the following two commands to stop and then restart the HP Helion OpenStack designer:

```
\var\lib\designer\bin\shutdown.sh
```

```
\var\lib\designer\bin\startup.sh
```

Searching for events

The most useful type of search is the timestamp-based search. Extracting logs across products in a given period will help you track the flow of events.

You can perform searches using search strings that are similar to Google searches. For example, you can search by subscription name using the name provided in the HP Cloud Service Automation Cloud Subscriber Portal when a subscription was submitted. A search for the subscription name returns all the related HP Cloud Service Automation log events for subscriptions with that name. Note that if the subscription name is not unique, the log events that are returned might not be related to the given subscription.

Another method is to use saved searches to return logs.

To create saved searches for HP Cloud Service Automation logs, complete the following steps:

1. In the ArcSight Logger Portal, click **Analyze > Search**.
2. Select the desired time period.
3. For each case, provide the regex string given in [Regular Expressions for HP Cloud Service Automation Logs](#).
4. Click **Go** to return all the HP Cloud Service Automation logs for the selected time period.

5. Save the search string if you want to reuse it.

Using regular expressions

You can create, customize, and save the regular expression (regex) searches described in this section.

All HP Cloud Service Automation logs

This regular expression returns all HP Cloud Service Automation logs for the selected time period.

```
| rex "\d+ \S+ \d+ \S+ \, \d+ \[ \S+ \] (?<status>\S+)
(?<userType>\S+)= (?<username>\S+); \S+= (?<artifactId>\S+); .*" | regex userType =
"csaUserName"
```

HP Cloud Service Automation error logs

This regular expression returns all the HP Cloud Service Automation logs that have error messages.

```
| rex "\d+ \S+ \d+ \S+ \, \d+ \[ \S+ \] (?<status>\S+)
(?<userType>\S+)= (?<username>\S+); \S+= (?<artifactId>\S+); .*" | regex userType =
"csaUserName" | regex status = "ERROR"
```

HP Cloud Service Automation info or warning logs

This regular expression returns all the HP Cloud Service Automation logs that are either info or warning type log messages.

```
| rex "\d+ \S+ \d+ \S+ \, \d+ \[ \S+ \] (?<status>\S+)
(?<userType>\S+)= (?<username>\S+); \S+= (?<artifactId>\S+); .*" | regex userType =
"csaUserName" | regex status = "INFO|WARN"
```

HP Cloud Service Automation logs for all users

This regular expression returns all the HP Cloud Service Automation logs for all users.

```
| rex "\d+ \S+ \d+ \S+ \, \d+ \[ \S+ \] (?<status>\S+)
(?<userType>\S+)= (?<username>\S+); \S+= (?<artifactId>\S+); .*" | regex userType =
"csaUserName" | regex username= ".*"
```

To customize this search, replace the “.” for the search parameter username with the HP Cloud Service Automation username. For example:

```
| rex "\d+ \S+ \d+ \S+ \, \d+ \[ \S+ \] (?<status>\S+)
(?<userType>\S+)= (?<username>\S+); \S+= (?<artifactId>\S+); .*" | regex userType =
"csaUserName" | regex username= "CSAAdmin"
```

In the above case, csaAdmin is a user in HP Cloud Service Automation that has submitted a subscription.

HP Cloud Service Automation logs for all artifact IDs

This regular expression returns all the HP Cloud Service Automation logs for all artifact IDs.

```
| rex "\d+ \S+ \d+ \S+ \, \d+ \[ \S+ \] (?<status>\S+) (?<userType>\S+)= \S+;
\S+= (?<artifactId>\S+); .*" | regex userType = "csaUserName" | regex artifactId =
".*"
```

To customize this search, replace the “.” for the search parameter artifactid=“.” with the artifact ID for a particular subscription or user. The artifact ID can be obtained by filtering based on username and time period. For example:

```
| rex "\d+ \S+ \d+ \S+ \, \d+ \[ \S+ \] (?<status>\S+) (?<userType>\S+)= \S+;
\S+= (?<artifactId>\S+); .*" | regex userType = "csaUserName" | regex artifactId =
"402894d536c3d81b0136c43d2ffc247a"
```

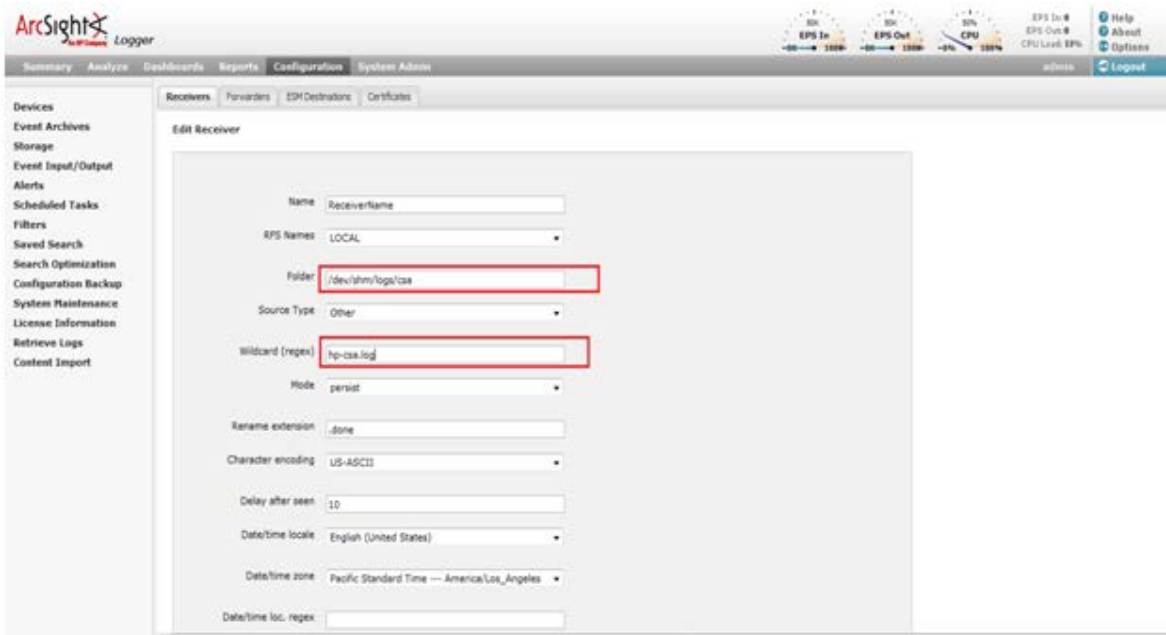

The screenshot shows the ArcSight Logger Configuration page. The top navigation bar includes Summary, Analyze, Dashboards, Reports, Configuration, and System Admin. The Configuration page is active, and the Receivers tab is selected. A table lists existing receivers with columns for Name, Type, IP Address, and Port. Each row has status icons for Add, Edit, and Delete.

Name	Type	IP Address	Port
Central_wrapper.log	File Receiver		
cmdf.apiaudit.detailed.log	File Receiver		
CSALog1	File Receiver		
hp-csa.log	File Receiver		
hpio.log	File Receiver		
hpio-controller.log	File Receiver		
hp-svc.log	File Receiver		
RunMonitor.log	File Receiver		
TCP Receiver	TCP Receiver	All	514
UDP Receiver	UDP Receiver	All	515

4. Click **Add** to add a new receiver.
5. In the **Name** field, type the Receiver name.
6. In the Type field, type File Receiver.

The screenshot shows the ArcSight Logger Configuration page with the 'Add Receiver' dialog box open. The dialog has a 'Name' text input field containing 'ReceiverName' and a 'Type' dropdown menu with 'File Receiver' selected. There are 'Next' and 'Cancel' buttons at the bottom right of the dialog.

7. Click **Next**.
8. In the **Folder** field, type the name of the folder where the log files exist on the ArcSight Logger server. Make sure the ArcSight Logger user has read and write permissions for the folders.
9. In the **Wildcard** field, type the name of the log file.

10. In the **Date/time loc. regex** field, type the regular expression to identify the date in an event.

For example, consider the following log event:

```
28 Feb 2012 06:02:36,646 INFO
[org.springframework.scheduling.concurrent.ScheduledExecutorFactoryBean#0-2]
(CatalogLifecycleManagerImpl.java:210) - [csa] [CATALOG] Catalog initialization
complete.
```

The regular expression for the date/timestamp in this log event is:

```
^(.*?)\,\d+.*
```

11. In the **Date/time format** field, type the date/timestamp format.

For example:

If the date is:

```
28 Feb 2012 06:02:36
```

The format should be:

```
dd MM yyyy HH:mm:ss
```

12. In the **Event start (regex)** field, type the regex for event start. This tells the logger the pattern used for each event. That is, where the event starts and ends.

For example:

Consider the following log event:

```
28 Feb 2012 06:02:36,646 INFO
[org.springframework.scheduling.concurrent.ScheduledExecutorFactoryBean#0-2]
(CatalogLifecycleManagerImpl.java:210) - [csa] [CATALOG] Catalog initialization
complete.
```

The regular expression for the event start pattern is:

```
^(.*?)\,\d+.*
```

Mode: persist

Rename extension: .done

Character encoding: US-ASCII

Delay after seen: 10

Date/time locale: English (United States)

Date/time zone: Pacific Standard Time --- America/Los_Angeles

Date/time loc. regex:

Date/time format:

Event start (regex):

13. After completing the fields described in these steps, click **Save**.

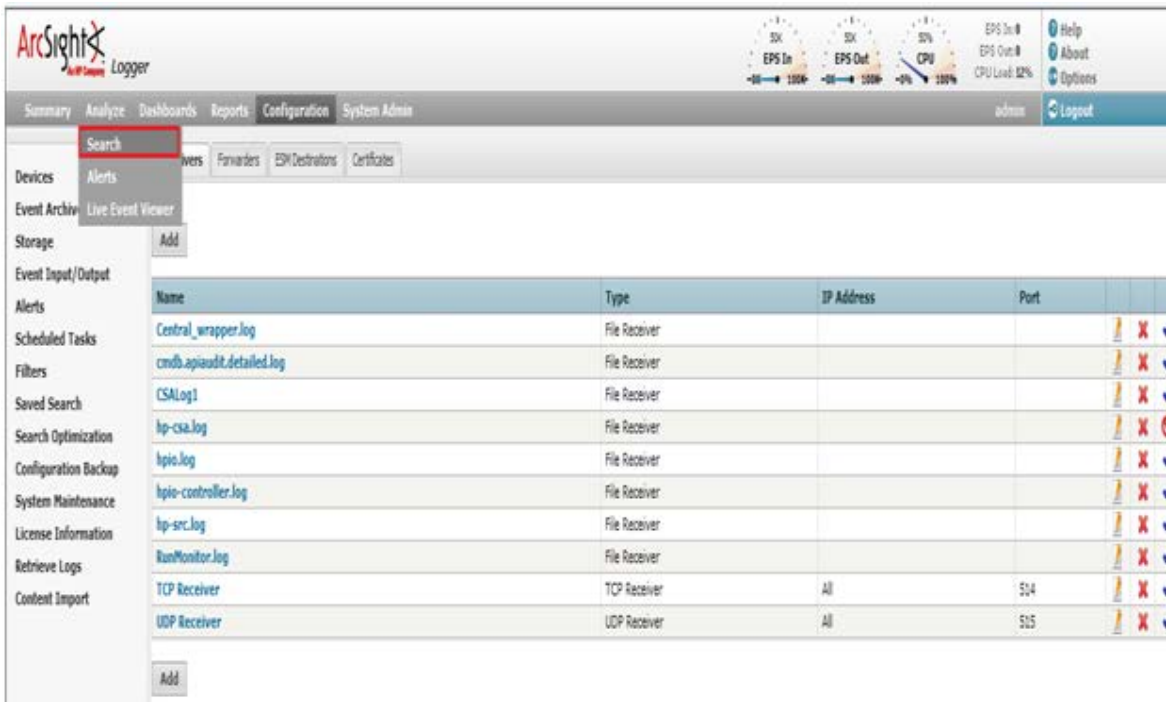

14. The file receiver that you created is disabled by default. Enable the receiver by clicking the enable icon shown in the following image.

When the receiver is enabled, the log data is loaded to the logger.

The screenshot shows the ArcSight Logger configuration page for Receivers. The table below lists various receivers, their types, IP addresses, and ports. The 'hp-csa.log' receiver is highlighted with a red box, and a red arrow points to its enable icon (a circle with a plus sign) in the rightmost column.

Name	Type	IP Address	Port	Enable	Refresh	Test
Central_wrapper.log	File Receiver			<input type="checkbox"/>		
cmdls.apiaudit.detailed.log	File Receiver			<input type="checkbox"/>		
CSALog1	File Receiver			<input type="checkbox"/>		
hp-csa.log	File Receiver			<input checked="" type="checkbox"/>		
hpio.log	File Receiver			<input type="checkbox"/>		
hpio-controller.log	File Receiver			<input type="checkbox"/>		
hp-src.log	File Receiver			<input type="checkbox"/>		
RunMonitor.log	File Receiver			<input type="checkbox"/>		
TCP Receiver	TCP Receiver	All	514	<input type="checkbox"/>		
UDP Receiver	UDP Receiver	All	515	<input type="checkbox"/>		

15. To look at all the log events loaded by the receiver, click **Analyze > Search**.

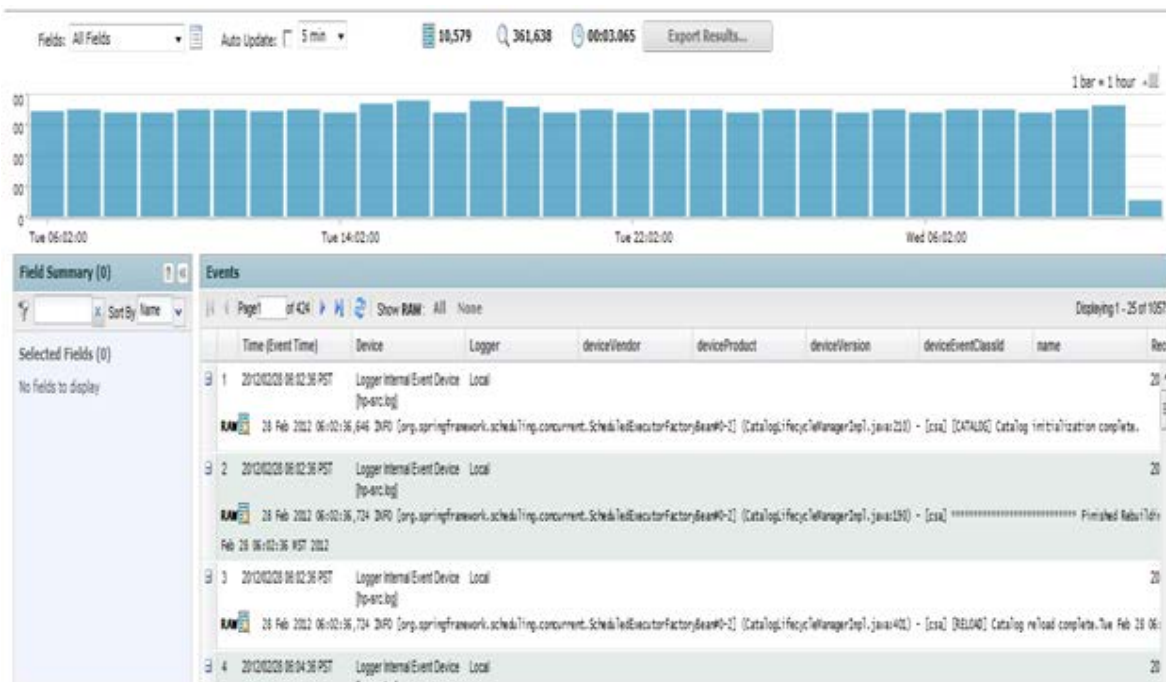

16. Select **Last 30 days** as the time range.

17. Enter the following search string, replacing `hp-csa.log` with the receiver name that you provided:

`_deviceGroup in ["Logger Internal Event Device [hp-csa.log]"]`

Every file receiver is recognized as Logger Internal Event Device by the logger. Therefore, the search should be performed on the device group and logger internal event device.

18. Click **GO**.

19. You can create custom filters to analyze log events. You cannot create custom filters that filter by time.

Best practices for manual upload

During manual upload, there is a chance that log events could be uploaded repetitively. This might exceed the daily inflow limit of the free version of ArcSight Logger (750 MB per day). To avoid this situation, observe the following best practices:

1. Perform periodic uploads on a daily, weekly, monthly, or as-needed basis. Avoid more than one upload per day.
2. After each upload, rename the log file so that repetitive uploads can be avoided and fresh logs are generated in the new log file.

Upgrading ArcSight Logger

If you upgrade ArcSight but you are not upgrading HP Cloud Service Automation, then you do not need to do anything.

If you upgrade HP Cloud Service Automation, the `log4j.properties` file may contain duplicate entries if HP Cloud Service Automation was previously integrated with ArcSight Logger.

To update the configuration file after upgrading HP Cloud Service Automation, complete the following steps:

1. Open `log4j.properties`, which is found in `C:\Program Files\Hewlett-Packard\CSA\jboss-as\standalone\deployments\csa.war\WEB-INF\classes`.
2. Comment the following lines, which are found at the end of the file:

```
#log4j.appender.cef1=com.hp.esp.arcsight.cef.appender.Log4jAppender
#log4j.appender.cef1.deviceVendor=HP
#log4j.appender.cef1.deviceProduct=HP Cloud Service Automation
#log4j.appender.cef1.deviceVersion=4.2
#log4j.appender.cef1.transportType=SYSLOG
#log4j.appender.cef1.hostName=192.x.x.x
#log4j.appender.cef1.port=515
#log4j.appender.cef1.layout=org.apache.log4j.PatternLayout
#log4j.appender.cef1.layout.ConversionPattern=%d{DATE} [%t] %-5p %x %C{1} : %m%n
#log4j.appender.cef1.appender.threshold=off
```

Appendix A
