

HP IT Business Analytics

Software Version: 10.00
Linux[®] operating system

Getting Started Guide

Document Release Date: May 2015
Software Release Date: May 2015

Legal Notices

Warranty

The only warranties for HP products and services are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. HP shall not be liable for technical or editorial errors or omissions contained herein.

The information contained herein is subject to change without notice.

Restricted Rights Legend

Confidential computer software. Valid license from HP required for possession, use or copying. Consistent with FAR 12.211 and 12.212, Commercial Computer Software, Computer Software Documentation, and Technical Data for Commercial Items are licensed to the U.S. Government under vendor's standard commercial license.

Documentation Updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition of a document, go to:

<https://softwaresupport.hp.com>

This site requires that you register for an HP Passport and sign in. To register for an HP Passport ID, go to:

<https://hpp12.passport.hp.com/hppcf/createuser.do>

Or click the **the Register** link at the top of the HP Software Support page.

You will also receive updated or new editions if you subscribe to the appropriate product support service.

Contact your HP sales representative for details.

Support

Visit the HP Software Support Online web site at: **<https://softwaresupport.hp.com>**

This web site provides contact information and details about the products, services, and support that HP Software offers.

HP Software online support provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the support web site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Download software patches
- Manage support contracts
- Look up HP support contacts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

Most of the support areas require that you register as an HP Passport user and sign in. Many also require a support contract. To register for an HP Passport ID, go to:

<https://hpp12.passport.hp.com/hppcf/createuser.do>

To find more information about access levels, go to:

<https://softwaresupport.hp.com/web/softwaresupport/access-levels>

HP Software Solutions Now accesses the HPSW Solution and Integration Portal Web site. This site enables you to explore HP Product Solutions to meet your business needs, includes a full list of Integrations between HP Products, as well as a listing of ITIL Processes. The URL for this Web site is

<http://h20230.www2.hp.com/sc/solutions/index.jsp>

About this PDF Version of Online Help

This document is a PDF version of the online help. This PDF file is provided so you can easily print multiple topics from the help information or read the online help in PDF format. Because this content was originally created to be viewed as online help in a web browser, some topics may not be formatted properly. Some interactive topics may not be present in this PDF version. Those topics can be successfully printed from within the online help.

Quick Access Chart

Note: In version 10.00, the product name was changed from **HP IT Executive Scorecard (XS)** to **HP IT Business Analytics (BA)**.

HP IT Business Analytics automatically gathers data from across your IT systems to build key performance indicators (KPIs) providing organizations with broad and deep insights into everything IT does. The image map below provides the main workflow of Business Analytics.

Optional - Install and Manage Content Acceleration Packs

Content Acceleration Packs (CAPs) in the *Guide to BA Content Acceleration Packs*.

Configure Settings

Users, Roles, Resources, Permissions, LDAP, and Dimension Permissions in the *BA Administrator Guide*.

Settings in the *BA Administrator Guide*.

Set up to Bring Data in the System

- **Dynamic Data using integrations and Data Warehouse**

Activate the ALM Data Source in the *BA Content Reference Guide*.

CSA Data Source - Bring Live CSA Data into XS in the *BA Content Reference Guide*.

Activate the PPM Data Source in the *BA Content Reference Guide*.

Activate the SM Data Source in the *BA Content Reference Guide*.

Connect the Data Source in the *BA Administrator Guide*.

- **Static Data**

Semantic Layer - Excel (or .CSV) File Loader in the *BA Administrator Guide*.

- **Advanced Configurations**

- Use ID to extend content. For details, see *BA Content Extension Guide*.

- Create Business Context using Context Designer. For details, see Semantic Layer - Context Designer in the *BA Administrator Guide*.

- Modify DCS extractors. For details, see *DCS Extractor SDK Guide*.

Perform the Maintenance

- Perform the ETL tasks. For details, see Run ETL - Content Flow Management in the *BA Administrator Guide*.

- Use the Maintenance Tools. For details, see [Maintenance Tool](#) in the *BA Administrator Guide*.

- Business Analytics Back Up in the *BA Administrator Guide*.

Review the OOTB Elements

- OOTB KPIs/Metrics related to Data Sources. For details, see KPIs, Metrics, Contexts, and Data Source Integrations in the *BA KPIs and Metrics Reference Guide*.

- OOTB Contexts. For details, see Reference: Contexts (Universes) in the relevant *BA Content Reference Guides*.

Customize the Studio and Dashboard contents

Develop New Content Using the Integrated Development Environment in the *BA Content Extension Guide*.

Create Content Acceleration Packs in the *Guide to BA Content Acceleration Packs*.

Step-by-step with Business Analytics

This section provides the list of steps to perform to begin working with the Business Analytics application.

Prerequisites

- Read the *BA Release Notes*.
The document includes release notes, and installation and upgrade information.
- Read the *BA Support Matrix*.
The document includes information about the supported data sources and the requirements.

Install Business Analytics

- Install Business Analytics and run the post-install wizard.
For details, see the *BA Installation Guide*.

Set up Users, Permissions, and Settings

Set up the users, permissions, settings, perform maintenance, and more. For details, see *Getting Started with Administration Tasks* in the *BA Administrator Guide*.

Upload Data to Business Analytics

You can upload data to Business Analytics using one or more of the following processes:

- **Install Content Packs**

Install the relevant Content Packs. A Content Pack is a set of files which defines the execution of an ETL along with all its parameters. For details, see *Install Content Pack* in the *BA Administrator Guide*.

- **Connect Data Sources**

Connect the relevant data sources. The integration of data into the Data Warehouse (DWH) is through the activation of data sources. For details, see *Connect the Data Source* in the *BA Administrator Guide*.

The supported data sources are:

- ALM Data Source - Integration, Associated Contexts, KPIs, Metrics, Data Lineage, and Reports
- AWS Data Source - Integration, Associated Context, KPIs, Metrics, and Data Lineage
- AWSCW Data Source - Integration, Associated Context, KPIs, Metrics, and Data Lineage
- CSA Data Source - Integration, Associated Context, KPIs, Metrics, and Data Lineage

- PPM Data Source - Integration, Associated Contexts, KPIs, Metrics, and Data Lineage
- SM Data Source - Associated Contexts, KPIs, Metrics, Data Lineage, and Reports

All these documents are available in the *BA Content Reference Guide*.

- **Optional - Configure the Consolidation**

The Consolidated Entities page enables you to consolidate an entity that appears in different data sources, to prioritize the data sources, to select the relevant entity dimensions (columns), and to select when to use the consolidation.

For details, see Configure Consolidation in the *BA Administrator Guide*.

- **Run the ETL - Content Flow Management**

After a Content Pack (CP) is activated, the Content Pack Manager notifies the Content Flow Manager to create a job stream for this CP instance. The job stream includes a series of predefined steps. Each step is an individual job such as an extractor job or an ETL job. The job executes the backend process to pull the data from the data source to the Data Warehouse.

Each CP instance has an individual job and each job can run in parallel.

For details, see Run ETL - Content Flow Management in the *BA Administrator Guide*.

- **Populate Business Analytics using Content Acceleration Packs**

Content Acceleration Packs are ready-to-import packages that include one Scorecard, several KPIs, a Dashboard page that displays data in the Scorecard component and its KPI components, a Context (universe), and more. You can then use Content Acceleration Packs as the base for further configuration of KPIs, contexts, Dashboard pages or more, or you can remove the Content Acceleration Packs.

For details, see Content Acceleration Packs (CAPs) in the *Guide to BA Content Acceleration Packs*.

- **Optional - Upload data into Business Analytics using .CSV files**

You can simply and easily upload data into the BA Studio using .CSV files without integrating with external sources or other HP products. The Studio can then be used to integrate with third party data sources, testing, or for Proof of Concept (POC) sessions. For details, see Semantic Layer - Context Designer in the *BA Administrator Guide*.

Run ETLs

Run ETLs. The data warehouse uses the ETL process to extract, consolidate, and transform the source data into a meaningful target model that populates relevant business analytics. For details, see Getting Started with Administration Tasks in the *BA Administrator Guide*.

Customize - Use out-of-the-box KPIs and Metrics or Create your Own and Create your Dashboard Display

- **Review and customize the contents of the Studio and Dashboard pages**

For details on working with the Studio and Dashboard, see *Getting Started with the Studio and Dashboard* in the *BA Business Analyst User Guide*.

Review Scorecards, Perspectives, Objectives, and KPIs in the Studio. You can customize these items. For details, see *Scorecard Configuration Details*, *Perspective Configuration Details*, *Objective Configuration Details*, or *Objective's KPIs* in the *BA Business Analyst User Guide*.

If you have installed a Content Acceleration Pack, you can review the Executive page in the Dashboard. You can also create your Dashboard pages by populating them with the relevant components. For details, see *Dashboard Page or Page Layout and Components*. Or add components as described in *Dashboard Display* in the *BA Business Analyst User Guide*.

- **Combine data and contexts from all methods**

You can combine contexts from the Content Acceleration Packs, from tables created using .CSV files, and tables created by integrating with supported data sources.

You can combine data obtained from the integration with supported data sources and from tables imported using .CSV files.

Customize Business Analytics Contexts

In addition to customizing Scorecards, Perspectives, Objectives, KPIs, Metrics, and Dashboard pages, you can also customize the contexts:

- View the out-of-the-box universes created by integrations with supported data sources. For details, see the relevant context in the *Reference: Contexts (Universes)* in the *BA Content Reference Guide*.
- You can also create your own context (universe) using the existing database tables, and tables created by importing .CSV files, and creating relationships between these tables. You can select the entities you want to use to create KPIs in the Studio, and then use these KPIs to build the relevant Dashboard pages. For details, see *Semantic Layer - Context Designer* in the *BA Administrator Guide*.

Extend your content (Advanced users)

The Integrated Development Environment (IDE) allows you to develop content, model DWH schemas, and more. For details, see *Develop New Content Using the Integrated Development Environment* in the *BA Content Extension Guide* or in the [HP Software Product Manual Site \(http://h20230.www2.hp.com/selfsolve/manuals\)](http://h20230.www2.hp.com/selfsolve/manuals).

Localize and globalize

The user interface of HP BA supports multiple languages. For details, see *Localization and Globalization* in the *BA Administrator Guide*.

View the Data in the Dashboard

For details, see *View and Analyze the Business Objectives* in the *BA Business Analyst User Guide*.

View the Business Analytics on Mobiles

For details, see *Getting Started with the BA for Mobiles App* in the *Getting Started with BA for Mobiles*.

Business Analytics UI Modules

HP IT Business Analytics includes several user interface modules.

Depending on their permissions the Administrator, the Business Analyst, and the Executives can view, manage, or administrate tabs, pages, components, and more.

 [Learn More](#)

Dashboard

The Dashboard has several capabilities:

- The Dashboard mashup is where the Business Analyst can create pages and components, and can configure how to display the information that the Executive wants to see. The information is displayed on pages that can include one or more components. For details about what you can do in the Dashboard, see *Dashboard Display* in the *BA Business Analyst User Guide*.
- The Dashboard display is where the Executives view the pages relevant to the Executive role, can view how well their required objectives are doing, and can drill down to subordinates pages to breakdown the information and get a better understanding of the situation. For details about what the Executive can view in Dashboard, see *View and Analyze the Business Objectives* in the *BA Business Analyst User Guide*. For concept details about the Dashboard, see *Dashboard Capabilities* in the *BA Business Analyst User Guide*.

ADMIN tab

The component where the administrator sets the users, permissions and roles, and performs the administration and maintenance of BA and Data Warehouse. For details, see *Getting Started with Administration Tasks in the BA Administrator Guide*.

STUDIO tab

The Studio is where the Business Analyst creates and manages all the building elements that are used to create the displayed pages and components of the Executive Dashboard. In the Studio, the Business Analyst can:

- Manage Scorecards, Perspectives, Objectives, Metrics, Metric Breakdowns, KPIs, KPI Breakdowns, or Unassigned KPIs
- Change formulas or filter thresholds, and more. For concept details about the Studio, see *Business Analytics Components in the BA Business Analyst User Guide*. For details about what the Business Analyst can do in the Studio, see *Learn About the Executive Dashboard, Create the Dashboard Contents in the Studio or Enrich the Dashboard Contents in the Studio* in the *BA Business Analyst User Guide*.

EXPLORER tab

The EXPLORER tab is where the executives can view overtime information about Scorecards, Perspectives, Objectives, KPIs, KPI Breakdowns, Metrics, Metric Breakdowns, or Unassigned KPIs, and can access other reports or external pages that display other facets of the situation. The executives usually access the EXPLORER tab in context, by drilling down from the relevant Objectives or KPIs in the Dashboard components. Executives can also add, edit, and email annotations regarding the elements displayed in the Explorer.

For details about the Explorer, see Explorer in the *BA Business Analyst User Guide*. For details about what the Executive can view in Explorer, see View and Analyze the Business Objectives in the *BA Business Analyst User Guide*.

Content Acceleration Packs

Learn More

Content Acceleration Packs (CAPs) are ready-to-import packages that include Dashboard pages that display Scorecards and components, KPIs, Metrics, Contexts (universes), data (from .CSV files or from data sources), and documentation for the CAP.

CAPs describe typical stories that show how the correct implementation of Business Analytics drives Performance Improvement and Cost Reduction for the IT organization.

CAPs demonstrate Business Analytics capabilities, and helps you add basic elements that can be used to customize your Dashboard.

For details, see Content Acceleration Packs (CAPs) in the *Guide to BA Content Acceleration Packs*.

About KPIs, Metrics, Contexts, and Data Source Integrations

This section provides information about the Data Sources, the Contexts linked to the data sources, and the corresponding KPIs and Metrics, and indicates if there is a need for consolidation when working with other data sources. For details, see KPIs, Metrics, Contexts, and Data Source Integrations in the *BA Content Reference Guide*.

How Data is Included into Business Analytics

For details, see the *Data Usage Overview* document in PDF format.

Application Toolbar

The application toolbar in the top right corner includes the following:

- **User.** Displays a picture of the current user. You can select the relevant picture. For details, see Personalize the Dashboard in the *BA Business Analyst User Guide*.
- **<user_name>.** The user name of the current user.
- **Logout.** Click the button to log off.
- **Help.** Click to open a menu and select the relevant option:
 - **Help Center.** Select to open the complete online documentation.
 - **Movies.** Select to access a list of the BA movies. For details, see Access Movies in the *Getting Started with BA*.
 - **About.** Select to view details about the version, patches, and Content Packs, as well as License information, and copyrights. For details about the licenses, see Licenses in the *BA Administrator Guide*.

Common Use Cases

This section provides the basic scripts for common use cases, an explanation about how to access the movie that presents the script, and a link to the relevant page in the documentation where you can find more conceptual information and a detailed description of the relevant UI pages or dialog boxes.

This section includes:

- [Use Case - End-to-End Data Flow](#) 25
- [Use Case - Renew your License - 22](#) 26
- [Use Case - Activate or Deactivate a Data Source - 1](#) 27
- [Use Case - Schedule Import Excel File - 26](#) 28
- [Use Case - Create a New Business Context - 2](#) 29
- [Use Case - Create a New User \(Permissions and Roles\) - 3](#) 30
- [Use Case - LDAP - 27](#) 31
- [Use Case - Permissions - 23](#) 32
- [Use Case - Dimension Level Permission - 36](#) 33

- [Use Case - Run the ETL - 5](#) 35
- [Use Case - Add an Annotation, Send Email, Save as PDF, and Print - 6](#) 36
- [Use Case - Filter Components - 8](#) 37
- [Use-Case - Configure the Calculation Rule for an Objective - 9](#) 38
- [Use Case - Configure a KPI or Metric Formula - 10](#) 39
- [Use Case - Create KPI Breakdowns and Configure Breakdown Override - 11](#) 40
- [Use Case - Build a Scorecard Tree and Create a New KPI - 12](#) 41
- [Use Case - Create a New Metric - 13](#) 42
- [Use Case - Create Cascading Scorecards - 14](#) 43
- [Use Case - Display and Modify KPI Properties - 15](#) 44
- [Use Case - Schedule an Automatic KPI Context Calculation - 16](#) 45
- [Use Case - Drill Down to Explorer for More Information - 37](#) 46
- [Use Case - Forecast - 28](#) 47
- [Use Case - Create a Dashboard Page and add Components to the Page - 7 and 30](#) 48
- [Use Case - View Data from External Data Sources](#) 49
- [Use Case - View Data from an External File](#) 51
- [Use Case - Embeddability - 25](#) 52
- [Use Case - Entity Report Notification - 31](#) 53
- [Use Case - IDE - Overview](#) 54
- [Use Case - IDE - Develop a New Entity](#) 55

- Use Case – Consolidate Entities on Demand - 34 58
- Use Case - End User Features - 40 59
- Use Case - Understand the Documentation - 29 60
- Use Case - Find Information - 24 61

Use Case - End-to-End Data Flow

Business Analytics allows you to calculate metrics and KPIs and then present those results in a unified dashboard.

In this use case, you will view the entire end-to-end flow: from how to import data from an HP product and then how to calculate a KPI and present the result in the Dashboard.

We will then see how to import data from a custom spreadsheet as well.

See the movie **0_E2E_data_flow**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

Use Case - Renew your License - 22

In this use case, you will learn how to renew your Business Analytics license using the Maintenance Tool.

See the movie **22_Renew_a_License**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Licenses in the *BA Administrator Guide*.

Use Case - Activate or Deactivate a Data Source

- 1

In this use case, you will learn how to activate and deactivate the different Data Sources supported by Business Analytics. The Connect Data Source UI also enables you to edit configurations and test the database connections.

Watch the movie **1_Activate_Data_Source**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Connect the Data Source in the *BA Administrator Guide*.

Use Case - Schedule Import Excel File - 26

In this use case, you will learn how to upload data into the Table Repository of the Context Designer using Excel files.

You can schedule the automatic upload of the same Excel file during the import or at a later time.

This feature enables the upload of data without integration with external sources or with other HP products. The feature can be used to integrate third party data sources, testing, or for Proof of Concept (POC) sessions. You can, in the same way, replace the data in an existing table, or add data to an existing table when the table has been loaded using an Excel file.

See the movie **26_Schedule_Import_Excel_File**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Semantic Layer - Data Loader Scheduler in the *BA Content Reference Guide*.

Use Case - Create a New Business Context - 2

In this use case, you will learn how to create a new Business Context.

Business Analytics enables the importation of data into the Studio using all the out-of-the-box integrations with other HP products.

In addition, you can import data from custom CSV files into the application and you can use that data for KPIs and Metrics as well.

See the movie **2_Create_New_Business_Context**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Context Designer Wizard in the *BA Content Reference Guide* or Modify a KPI or Metric Formula in the *BA Business Analyst User Guide*.

Use Case - Create a New User (Permissions and Roles) - 3

In this use case, you will learn how to create a new role and grant it permissions. Then you will learn how to assign the role to a group of users and how to add a new user to that group. As soon as you create a user and you assign it a Role— you can use that user to log on to Business Analytics.

See the movie **3_Create_New_User**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Manage Roles and Manage Users in the *BA Administrator Guide*

Use Case - LDAP - 27

In this use case, you will learn how to configure LDAP using the LDAP Management wizard so the users configured in LDAP are available in BA.

See the movie **27_LDAP**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see LDAP Management in the *BA Administrator Guide*

Use Case - Permissions - 23

This use case shows you how to create and use permissions..

Watch the movie **23_Permissions**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Role Management in the *BA Administrator Guide*.

Use Case - Dimension Level Permission - 36

In this use case, you will learn how to set permissions at the level of the dimension and entity.

Watch the movie **36_Dimension_Permissions**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Dimension Permissions in the *BA Administrator Guide*.

Use Case - Create, download, and upload Content Acceleration Packs (CAPs) - 4

In this section you will learn how to create, download, and upload Content Acceleration Packs (CAPs).

Watch the movie **4_Manage_Content_Acceleration_Packs**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Create Content Acceleration Packs, Activate a CAP, or Upload a CAP to the Business Analytics application in the *Guide to BA Content Acceleration Packs*.

Use Case - Run the ETL - 5

In this use case, you will learn how to run the ETL.

Note: Before running the ETL, make sure you have activated the relevant data source, make sure they are activated.

Watch the movie **5_Run_the_ETL**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Run ETL - Content Flow Management in the *BA Administrator Guide*.

Use Case - Add an Annotation, Send Email, Save as PDF, and Print - 6

In this use case, you will learn how to add an annotation, send an email, save information in PDF format or print information related to a Scorecard, Perspective, Objective, KPI, Metric, KPI Breakdown, or Metric Breakdown.

You can perform these tasks from either the First Level Navigation tooltip in the Dashboard or from within the EXPLORER tab

Watch the movie **6_Add_Annotation_and_Use_Action_Bar**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Annotations in the *BA Business Analyst User Guide*.

Use Case - Filter Components - 8

In this use case, you will learn how to filter the different Dashboard components and how to present the filtered data in a Dashboard page.

You have 2 main options to filter the data presented in the components:

- You can filter each component separately by clicking the Configure Component icon and setting the component configuration according to the support settings.
- You can use the Page Filter component. When you use this component, each selection you make in the Page filter, impacts all the other components in the page.

Watch the movie **8_Filter_Components**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details about the Page Filter component, see Add a Page Filter Component to a Page in the *BA Business Analyst User Guide*.

Use-Case - Configure the Calculation Rule for an Objective - 9

In this use case, you will learn how to configure a calculation rule for an Objective.

Watch the movie **9_Configure_a_Calculation_Rule_for_an_Objective**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Objective Configuration Details in the *BA Business Analyst User Guide*.

Use Case - Configure a KPI or Metric Formula - 10

In this use case, you will learn how to configure a KPI or a Metric formula.

Watch the movie **10_Configure_a_KPI_Formula**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For more details, see *Configure a KPI or a Metric* in the *BA Business Analyst User Guide*.

Use Case - Create KPI Breakdowns and Configure Breakdown Override - 11

In this use case, you will learn how to create a KPI Breakdown and configure Breakdown Overrides.

Watch the movie **11_Create_KPI_Breakdowns_and_Configure_Breakdown_Overrides**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see *Configure a KPI or a Metric*, *Manage KPI Breakdowns*, *Calculate Displayed Values after Configuration Change*, or *Manage Overrides* in the *BA Business Analyst User Guide*

Use Case - Build a Scorecard Tree and Create a New KPI - 12

In this use case, you will learn how to create a new KPI and build a Scorecard tree.

You can create a Scorecard tree in the Active KPIs pane in 2 ways: either by selecting a Scorecard from one of the Trees in the KPI Library pane and dragging it to Active KPIs pane, or by creating a new Scorecard tree directly in the Active KPIs pane.

Watch the movie **12_Build_a_Scorecard_Tree_and_Create_a_new_KPI**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details about the Page Filter component, see Scorecard Configuration Details, Create Active Scorecards, Perspectives, Objectives, Metrics, or KPIs, Perspective Configuration Details, Objective Configuration Details, and KPI or Metric Configuration and Calculation Details in the *BA Business Analyst User Guide*.

Use Case - Create a New Metric - 13

In this use case, you will learn how to create a new Metric.

Watch the movie **13_Create_a_New_Metric**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see KPI or Metric Configuration and Calculation Details, and Calculation in the *BA Business Analyst User Guide*.

Use Case - Create Cascading Scorecards - 14

In this use case, you will learn how to create Cascading Scorecards. Cascading Scorecards enable the user to view both a Scorecard and a Cascading Scorecard in a single Scorecard component in a Dashboard page.

To configure the Cascading Scorecards of a specific Scorecard, you must have more than one activated Scorecards in the Active KPIs pane.

To provide the executive with the capability of drilling down to a subordinate's Scorecard, both Scorecards have to be defined in the Studio and have to be active Scorecards.

Watch the movie **14_Create_Cascading_Scorecards**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Cascading Scorecards in the *BA Business Analyst User Guide*.

Use Case - Display and Modify KPI Properties - 15

In this use case, you will learn how to modify a KPI configuration.

Watch the movie **15_Modify_a_KPI_Configuration**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see *Configure a KPI or a Metric* in the *BA Business Analyst User Guide*.

Use Case - Schedule an Automatic KPI Context Calculation - 16

In this use case, you will learn how to schedule an automatic context calculation, so the calculation runs automatically according to your configuration and the data that is presented in the Dashboard is the latest data.

The calculation engine will now run automatically according to your settings.

Watch the movie **16_Schedule_Automatic_KPI_Context_Calculation**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Calculation Scheduling in the *BA Business Analyst User Guide*.

Use Case - Drill Down to Explorer for More Information - 37

In this use case, you will learn how to drill down into Explorer to view more information related to the Scorecard, Perspective, Objective, KPI, Metric, KPI Breakdown, or Metric Breakdown you selected in Dashboard.

The Explorer tab includes configuration details and historical information about the selected item and provides additional research, analytical, and data exploration capabilities. It allows a comprehensive understanding of the available data. The analytical capabilities focus around the Business Analytics main flow entities such as KPIs and Metrics and provides the ability to drill down into the details of the formula used to calculate the KPI or Metric, to see the building blocks of the calculation results, and to analyze the data used for the calculation. In addition, you can also view a tree of nodes that represents the display of the impact of the selected KPI, or KPI Breakdown on the relevant Objectives, Perspectives, and Scorecards.

Watch the movie **37_Explorer**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Explorer in the *BA Business Analyst User Guide*.

Use Case - Forecast - 28

In this use case, you will get a glimpse into the future by forecasting the entity future behavior, based on historical data, of the selected KPI or Metric. This will help you understand more easily the underlying trend and do all you can now to improve or maintain the desired behavior. Forecast is available in the Forecast component that you can add to a Dashboard page or in the Forecast tab of Explorer.

Watch the movie **28_Forecast**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see The Forecast Component in the *BA Business Analyst User Guide*.

For details, see Forecast in the *BA Business Analyst User Guide*.

Use Case - Create a Dashboard Page and add Components to the Page - 7 and 30

In this use case, you will learn how to create a Dashboard page and how to add components to the page.

Watch the movie **7_Create_a_New_Dashboard_Page**.

Watch the movie **30_Dashboard_Page_Components** .

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Dashboard Page, Page Layout and Components, Page Gallery and Page Categories, and Component Gallery and Component Categories in the *BA Business Analyst User Guide*.

Use Case - View Data from External Data Sources

This section presents the high level end-to-end flow you can follow to view your Scorecards and KPIs in the HP IT Business Analytics Dashboard. The data displayed in the Dashboard is based on data from the relevant data sources.

Prerequisite:

1. Read the *BA Release Notes* available on the Installation DVD. The document includes release notes, getting started information, installation and upgrade information, and troubleshooting notes.
2. Install Business Analytics and run the post-install wizard. For details, see the *BA Installation Guide* (interactive document) available on the Installation DVD.
3. Set up the users, permissions, and other general settings. For details, see Getting Started with Administration Tasks in **General Administration** in the online documentation library or in the *BA Administrator Guide*.

Install the Content Packs

To install a Content Pack:

1. Select **Admin > Data Management > Install Content Pack**.
2. Click **Install** for the relevant Content Pack.

The status is changed to **Upgrade** and the date of the installation is set in the **Operation Date** column.

Perform the integration with the Data Sources:

Watch the movie **1_Activate_Data_Source**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Connect the Data Source in the *BA Administrator Guide*.

The supported integrations are:

- ALM Data Source
- AWS Data Source
- AWSCW Data Source
- CSA Data Source - Bring Live CSA Data into XS
- PPM Data Source
- SM Data Source

Configure the Consolidation

If needed you can consolidate entities.

Watch the movie **34_Consolidate_Entities_On_Demand**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Configure Consolidation in the *BA Administrator Guide*.

Run the corresponding ETL

Watch the movie **5_Run_the_ETL**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Run ETL - Content Flow Management in the *BA Administrator Guide*.

Activate the CAPs

If needed you can activate CAPs.

Watch the movie **4_Manage_Content_Acceleration_Packs**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Content Acceleration Pack (CAP) Management in the *Guide to BA Content Acceleration Packs*.

You can now review the out-of-the-box Scorecards, Perspectives, Objectives, and KPIs, customize them, create Dashboard pages, and more. For details, see [Getting Started with the Studio and Dashboard in the BA Business Analyst User Guide](#)

Use Case - View Data from an External File

In this use case, you will learn how to upload data from an external file and how to schedule the automatic upload of the data into the Business Analytics using Context Designer.

Watch the movie **26_Schedule_Import_Excel_File**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Semantic Layer - Context Designer in the *BA Administrator Guide*.

Use Case - Embeddability - 25

In this use case, you will learn how to embed a BA Dashboard page into another application, and how to navigate from the embedded page back to the BA application.

Watch the movie **25_Embeddability**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see *Create Content Acceleration Packs, Activate a CAP, or Upload a CAP to the Business Analytics application* in the *Guide to BA Content Acceleration Packs*.

For more details, see *Page Gallery and Page Categories* in the *BA Business Analyst User Guide*.

Use Case - Entity Report Notification - 31

In this use case, you will learn how to set up the Entity Report to view the changes to the values or states of the BA entities.

You will also learn how to schedule to automatically generate the Entity Report for selected Scorecards, Perspectives, Objectives, KPIs, Metrics, KPI Breakdowns, and Metric Breakdowns and to send selected users email notification that include the Entity Report.

See the movie **31_Entity_Report_Email_Notification**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see Notifications - Entity Report in the *BA Administrator Guide*

Use Case - IDE - Overview

In this section you will learn about the BA DWH IDE. The DWH IDE provides the means to extend and develop DWH content.

DWH content is comprised of a set of Staging Area Data models, Target Area Data models and an ETL (Extract Transform Load) process. The ETL is aimed at moving and transforming data entities from the data source entities format to the Target Data model structure.

The eclipse tool contains 4 major areas:

- **Workspace:** The center of the screen is the canvas where you create models in the Stream Designers.
- **Project Explorer:** Contains the available projects.
- **Palette area:** Contains the tools for creating your content.
- **Tabs:** Contains the tabs with various property and error information.

Stream Designers:

The IDE provides two main levels of metadata modeling: The Architect Target Designer and the Engineer Stream Designer. The Architect Target Designer enables the user to model the DWH Target entities and the relations between them. The Engineer Stream Designer enables the user to create the sequence of models for data to be mapped from the source model to the target entity model.

To the right of the canvas is the palette which contains the set of tools used to design in the Designer.

To the left of the canvas, the package explorer contains a set of out of the box content packs. This is where all the content loaded into the IDE can be found.

The bottom area contains additional tabs such as the 'problems' view which provides indications of model validation errors and the properties view which enables the configuration of entity attributes and properties.

Usually, when starting the development of an entity, you begin with developing the Architect Target Designer, designing the new target schema and then you develop the Engineer Stream Designer, loading the target entity you created earlier and connecting to the data source schema.

The Target Entity is comprised of Fact and Dimension tables, which can be linked to associated dimensions.

The Source Entity is the actual and accurate representation of an entity to be extracted from the source. It is automatically generated according to integration entity design.

The Integration Entity is a Source Table representation.

Use Case - IDE - Develop a New Entity

In this section you will learn how to develop a new entity using the IDE. The development scope includes the full content development track – from source to target . In this movie it is required to create a new fact table since the requested measurements do not exist in the OOTB scheme, therefore we will start with creating the Stream Target Designer and then move to the Engineer context.

The data that used in this example comes from PPM.

Let's start with the importing of the relevant Content Packs.

1. Open the Eclipse IDE.
2. From the top menu select **File > Import**.
3. Under the General directory select **Existing Projects into workspace** and click Next.
4. Browse for the cp-core directory and click **OK**, click **Finish** to import the project.
5. Repeat these steps for cp-ppm and cp-ppm-9.1-oracle content packs.

The next step is to create two new logical projects: Architect_Context and Engineer_Context

1. From the top menu select **New > Project**, expand the **General** directory, select **Project** and click **Next**. Enter the name Architect_Context and click **Finish**.
2. The project for storing the Stream Target Designer diagram is created and displayed in the Package Explorer.

Repeat this procedure to create the Engineer_Context.

Now you can start designing the Architect Target Designer.

1. From the Package Explorer pane, select the Architect_Context directory you just created.
2. Right-click and select **New > Architect Target Designer**.
3. Enter a file name, in this case :PROJECT_STATUS_CSTM.architectcontext_diagram and click **Next**.
4. Click **Browse** and select **cp-core** and click **OK**.
5. Click **Finish** to finalize the context creation.
6. In the palette area on the right side, select **New Target Entity** and click in the canvas.
7. Enter an entity name ('PROJECT_STATUS_CSTM') and click **Enter**.
8. In the Properties tab select **General** and select the **Fact** checkbox.
9. Add a Target column by clicking **Target Column** in the palette area and click in the PROJECT_STATUS_CSTM entity frame.
10. For each column click **Target Column** and click in the PROJECT_STATUS_CSTM entity area and enter the name of the column.
11. Double-click **Load Target Entity** (in the palette area).
12. Expand the Core directory and select PERIOD/ Period entity and click **OK**.
13. Repeat this step and select PROJECT/ Project entity.
14. Create a link between the Fact you created and the Dimensions you loaded in the previous step by selecting **Fact to Dimension** in the palette area. Drag the arrow from the Fact column in the entity

- to the Dimension you want it linked to.
15. Create another link between the Fact and the Period dimension.
 16. In the Properties tab select **Columns** and set the **Length** of each column to **255** and the **Measure** to **True**.
 17. Save the configurations.

The design of Architecture context diagram is complete.

Now, you are ready to create the Engineer_Context.

1. From the Package Explorer pane select the Engineer_Context directory you created before, right click and select **New > Engineer Stream Designer** and click **Next**.
2. Enter a file name for the Engineer Diagram (in this case PROJECT_STATUS_CSTM.engineercontext_diagram) and click **Next**.
3. Select **cp-core** as the Target CP directory, **cp-ppm** as the Integration CP directory and **cp-ppm-9.1-oracle** as the Source CP directory and click **Finish**. The Engineer diagram is created and automatically opens.
4. In the palette area, click **Load Target Entity**, expand the Core directory and select the Target entity you created earlier and click **OK**. The Target Entity is displayed.

The next step is to create a New Integration Entity.

1. In the palette area, click **New Integration Entity**, click in the canvas and enter a name.
2. In the palette area, click **Integration Column** and click inside the Integration Entity and enter the column name. The column names must be exactly the same as in the source table.
3. In the Properties tab, select **Columns** and in the **Data Type** column, set the **Data Type**, **Length** and **Business Key** accordingly
4. Save the configurations.

Create SSI mapping between the Integration entity and Target entity

1. In the palette area, click **Column Mapping** and drag a line between PROJECT_ID and PROJECT.
2. Once the link is created a new entity is displayed: PPM – PROJECT_STATUS CTSM Transformation.
3. Continue creating SSI mapping links accordingly between the Integration Entity and the Transformation Entity.
4. Save your configurations.

Create a New Source Entity

1. In the palette area, click **New Source Entity** and click in the canvas.
2. Create a link between the New Source Entity and the Integration Entity, click **Source to Integration Relation** in the palette area and drag the display arrow from the Source to the Integration.
3. The name of the New Source Entity is automatically updated to PPM.9.1.oracle.PM_PROJECT_RLP_CSTM.
4. In the Properties tab, select **Columns** and update the table name for all the records with the original table name as it appears in the Data source DB.

5. In the Properties tab, select **General** and add the table name to the **Table Name/Join Condition** and save.

The next step will be to generate the ETL.

Use Case – Consolidate Entities on Demand - 34

In this use case, you will learn how to use Consolidation Management. The feature enables you to consolidate an entity that appears in different data sources, to prioritize the data sources, to select the relevant entity dimensions (columns) and their priorities, and when to use the consolidation.

Watch the movie **34_Consolidate_Entities_On_Demand**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see *Configure your Consolidations* in the *BA Administrator Guide*.

Use Case - End User Features - 40

In this use case, you will, as the end user, explore Business Analytics capabilities:

- View Dashboard Pages. For details, see
- Use wiring between components.
- Change, on demand, the periodicity of a component display
- Extract additional information using FLN
- Drill down to Explorer
- Change, on-the-fly, the display format of the following Dashboard components

Watch the movie **40_End_User_Features**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

Use Case - Understand the Documentation - 29

In this movie, you will learn how to understand the Business Analytics documentation and where to find what.

Watch the movie **29_Understanding_the_documentation**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see How to Find Information in the *Getting Started with BA*.

Use Case - Find Information - 24

In this use case, you will learn where you can find information about how to use BA:

- The Online Help (or Help Center)
- The PDFs
- The SSO Manual Site
- Movies
- Forums
- and more.

Watch the movie **24_Find_Information**.

To view the movie, click **Help** in the top right corner of the application main page, select the **Movies** option, and select the relevant movie.

For details, see How to Find Information in the *Getting Started with BA*.

Customization

This section includes:

- [Customize KPIs, Metrics, Formulas, Filters, and Breakdowns](#)63
- [Customize Objectives, Perspectives, Scorecards and Pages](#)64

Customize KPIs, Metrics, Formulas, Filters, and Breakdowns

BA enables you to customize KPIs as follows:

You can:

- Activate KPIs by dragging KPI templates from the KPIs Library pane to the Active KPIs pane in the Studio. For details, see *Activate Scorecards, Perspectives, Objectives, Metrics, or KPIs Using Templates* in the *BA Business Analyst User Guide*.
- Create KPIs by cloning existing active KPIs. For details, see *Create Active Scorecards, Perspectives, Objectives, Metrics, or KPIs* in the *BA Business Analyst User Guide*.
- Customize a formula or filter. For details, see *KPI or Metric Formula or KPI or Metric Filter* in the *BA Business Analyst User Guide*.
- Customize a KPI's Context. For details, see *KPI or a Metric Business Context* in the *BA Business Analyst User Guide*.
- Enrich the Dashboard contents with Metric Breakdowns and KPIs, overrides, Cascading Scorecards, and more. For details, see *Enrich the Dashboard Contents in the Studio* in the *BA Business Analyst User Guide*.

- Create and manage Breakdowns for a KPI or a Metric according to the KPI or a Metric dimensions. For details, see *KPI Breakdowns or Metric Breakdowns* in the *BA Business Analyst User Guide*.

When you configure a KPI Breakdown, its configuration (for example, formula, or period) is the same as the parent KPI's configuration. You may want to have a different threshold or owner for specific "branches" of the KPI Breakdowns. In addition, you may want to change the thresholds of some of the KPI Breakdowns. For details, see *KPI and Metric Breakdown Overrides* in the *BA Business Analyst User Guide*.

- Add information to a KPI. That information can be a link to a relevant Dashboard page, an external URL, a BO report that provides more information about the KPI, an Xcelsius report configured in the system. This additional information can help the Executive by providing external information related to a KPI, or more details about the KPI's value, status, and score, in the right pane of the EXPLORER tab. For details, see *KPI or Objective Additional Information* in the *BA Business Analyst User Guide*.

Customize Objectives, Perspectives, Scorecards and Pages

You can also customize the following:

- **Objectives, Perspectives, or Scorecards.** For details, see Objective Configuration Details, Perspective Configuration Details, Scorecard Configuration Details, or Objective's KPIs in the *BA Business Analyst User Guide*.
- **Dashboard Pages.** For details, see Dashboard Page or Page Layout and Components in the *BA Business Analyst User Guide*.

How to Find Information

This section includes:

- [Documentation Library](#) 65
- [Access the Online Help Pages Relevant to the Currently Displayed UI Page](#) 68
- [Send Feedback](#) 72
- [Documentation Updates](#) 72
- [Additional Information](#) 73
- [Access Movies](#) 74

Documentation Library

Business Analytics Help Center documents for this version are available with the download of the version from the HP Software Support Online web site at: <http://www.hp.com/go/hpsupport> or on the DVD.

This version includes the following documents:

<p>Release Notes</p> <p>Includes last minute information, fixed issues, and limitations.</p> <p>Access: <i>BA Release Notes</i> in PDF format in the DVD or Support Site.</p>	<p>Support Matrix</p> <p>Describes hardware requirements, software requirements, and supported environments.</p> <p>Access: <i>BA Support Matrix</i> in PDF format in the DVD or Support Site.</p>	<p>Installation Guide</p> <p>The <i>BA Installation Guide</i> enables you to install Business Analytics.</p> <p>Access: <i>BA Installation Guide</i> in PDF format in the DVD or Support Site.</p> <p>The <i>Virtual Appliance Installation Guide</i> enables you to install the Business Analytics virtual appliance.</p> <p>Access: <i>Virtual Appliance Installation Guide</i> in PDF format in the DVD or Support Site.</p>
<p>Security Guide</p> <p>Includes information on extending content and developing new content using the Integrated Development Environment (IDE).</p> <p>Access: <i>BA Security Guide</i> in PDF format in the Support Site.</p>		

<p>Getting Started Guide</p> <p>Provides useful information for getting up and running with the application.</p> <p>Access: <i>Getting Started with BA</i> in PDF format</p>	<p>Administrator Guide</p> <p>Describes the application's Administration tasks.</p> <p>Access: <i>BA Administrator Guide</i> in PDF format</p>	<p>Business Analyst User Guide</p> <p>Describes how to work with the Studio and the Dashboard to create and activate Scorecards, Perspectives, Objectives, Metrics, and KPIs, and to display the relevant information.</p> <p>Access: <i>BA Business Analyst User Guide</i> in PDF format</p>
<p>Content Reference Guide</p> <p>Provides the integration procedure with the relevant data source, reference information on Contexts (universes), links to the relevant out-of-the-box KPIs and Metrics, Web intelligence and operational reports if available.</p> <p>Access: <i>BA Content Reference Guide</i> in PDF format</p>	<p>CAPs Guide</p> <p>Provide details about Content Acceleration Packs (CAPs). The CAPs are ready-to-import packages that include Dashboard pages that display Scorecards and components, KPIs, Metrics, Contexts (universes), data (.CSV files), and documentation for the CAP. The document includes details about:</p> <ul style="list-style-type: none"> • The Cloud Optimization Content Acceleration Pack. • The VP of Applications Content Acceleration Pack. • The VP of Operations Content Acceleration Pack. • The CSA_Demo and the CSA Content Acceleration Packs. • The SM_Demo and the SM Content Acceleration Packs. • The PPM_Demo and the PPM Content Acceleration Packs. <p>CAPs describe typical stories that show how the correct implementation</p>	<p>Getting Started with BA for Mobiles</p> <p>Provides information on viewing Business Analytics on a tablet.</p> <p>Access: <i>Getting Started with BA for Mobiles</i> in PDF format</p>

	<p>of Business Analytics drives Performance Improvement and Cost Reduction for the IT organization.</p> <p>Documentation specific to the relevant CAP is accessible from the CAP user interface.</p> <p>Access: <i>Guide to BA Content Acceleration Packs</i> in PDF format</p>	
<p>KPIs and Metrics List</p> <p>The List of KPIs and Entities provides a list of the out-of-the-box KPIs and Metrics, their description, business motivation, formula, context, and more.</p> <p>The List of ITFM KPIs provides a list of the out-of-the-box KPIs related to ITFM, their description, Scorecard, Perspective, Objective, formula, context, and more.</p> <p>Access:</p> <p>List of KPIs and Entities in Excel format</p>	<p>List of Entities</p> <p>Provides a list of the available Dimension and Fact entities for the OOTB Data Warehouse Content Packs.</p> <p>Access: List of Entities in Excel format</p>	<p>ETL Process and Architectural Overview</p> <p>Provides a graphic representation of the ETL process and its architecture.</p> <p>Access: <i>BA ETL Process and Architectural Overview</i> in PDF format</p>

Advanced Guides	
Content Extension Guide Includes information on extending content and developing new content using the Integrated Development Environment (IDE). Access: <i>BA Content Extension Guide</i> in PDF format in the Support Site.	

Access the Online Help Pages Relevant to the Currently Displayed UI Page

How to access the online help depends on where you are in the application.

General Online Help

To access the general online help (the complete Documentation Library), click **Help** in the top right corner of the application display, then select **Help Center**.

ADMIN tab Online Help

- To access the online help for the relevant page in the **ADMIN** tab, open the relevant page using the accordion tabs and their menu options, and click **Help** in the top right corner of the page.

- To access the online help for dialog boxes that are opened from the ADMIN tab pages, click the **Help** button at the bottom of the dialog box. If the dialog box does not have a Help button, its documentation is included in the main page documentation accessed by clicking **Help** in the top right corner of the page.

EXPLORER tab Online Help

To access the online help in the **Explorer** tab, click **Help** in the top right corner of the page.

STUDIO tab Online Help.

To access the online help in the **Studio** tab:

- Click the STUDIO tab and click **Help** in the top right corner of the page to display general information about the Studio and how to work with it.

- Click **Read more...** in the top area of the **KPI Library** or **Active KPIs** pane to access the online help for these panes.

- Right-click any item (Scorecard, Perspective, Objective, KPI, Metric, Folder, and more) in the tree of the the **KPI Library** or **Active KPIs** pane to display a menu, and then select the Help menu item to display the online help for the item.

- Click **Help** in the top right corner of the dialog box to display the relevant online help.

Dashboard Online Help

To access the online help in the **Dashboard**:

- Close all tabs and click the relevant icon in the top right corner of the Dashboard page and click the **Help** button at the bottom of the dialog box that opens to display the online help for the dialog box.

- Click the  icon in the component toolbar to display the online help for the component.

Send Feedback

We welcome your comments!

At the bottom of each page in the online help, click the **Send documentation feedback to HP** link to open a window that explains how to send us your feedback regarding the currently open documentation page. Follow the instructions and send us your feedback.

Documentation Updates

Business Analytics documentation is also available on the HP Software Manuals site.

To check for recent updates or to verify that you are using the most recent edition of a document, go to:

<https://softwaresupport.hp.com/group/softwaresupport/home>

This site requires that you register for an HP Passport and sign in. To register for an HP Passport ID, go to:

<http://h20229.www2.hp.com/passport-registration.html>

Or click the **New users - please register** link on the HP Passport logon page.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your HP sales representative for details.

To replace the current documentation in your system with the recently updated documentation obtained from the Manual site, proceed as follows:

- Copy the online help to the **<HP-BA>/docs/<language_country_code>** directory where **<language_country_code>** is: **en_US** for English language documentation and **ja_JP** for Japanese language documentation.
- Copy the PDFs to the **<HP-BA>/docs/<language_country_code>/pdfs/** directory where **<language_country_code>** is: **en_US** for English language documentation and **ja_JP** for Japanese language documentation.

Access Movies

To access the out-of-the-box movies:

1. In one of the supported browsers, click **Help** in the top right corner of the application main page and select the **Movies** option.

The following page opens:

2. Select the relevant movie in the list to display the contents.

Note: If you are working with Internet Explorer 9 and do not see the movie, make sure that the Compatibility View is off (indicated by the  icon in the Explorer page).

For details about the movie scripts, see Common Use Cases in *Getting Started with BA*.

Movies are also available at: <http://www.youtube.com/user/eScorecard>

Dimension

An entity that describes, qualifies, or otherwise adds meaning to the measurements (facts) that business users want to analyze.

ETL (Extract Transform Load)

E - The extract process extracts delta data from the source systems and writes it to delimited flat files on the file system. The data warehouse uses the Change Data Capture (CDC) technique for extracting data from the source tables.

T - The transformation process transforms data into the format of the target tables and populates the load-ready target staging tables. The Transformation layer contains load-ready tables that match the internal structure of the data warehouse target tables.

L - The load process adds new records, updates existing records, and flags deleted records in the data warehouse target layer fact and dimension tables.

Measure

A value collected by the executable during execution, such as the number of rows processed during an ETL job, or an amount extracted from a table that describes expenses in a source application.

The ABC application does not make any assumptions about the business tasks performed by the executable or impose any semantic requirements on computed measure values.

The ABC application provides an interface for the executable to store measures. The ABC reports provide drill down capabilities into the stored measures.

Metadata

Agreed-upon definitions and business rules stored in a centralized repository to ensure that business users use common terminology for key business terms.

Metric

A framework to establish and collect measurements of success or failure on a regulated, timed basis that can be audited and verified.

Multi-dimension

The aggregation of data by the dimensions of the business. For example, sales by region by product by time.

PPM

Integration with HP Project and Portfolio Management
