

Integrating Test Results from Jenkins to ALM

This document describes how to install and configure the *HP-Application-Automation-Tools Jenkins* plugin to enable you to integrate test results from Jenkins to ALM. This feature is available starting from ALM 12.21. For more details on this feature, see the *HP Application Lifecycle Management User Guide*.

1. Prerequisites

Install a Jenkins server (the most recent version is recommended).

2. Installing the HP-Application-Automation-Tools Jenkins plugin

Download the plugin from the following location:

<https://wiki.jenkins-ci.org/display/JENKINS/HP+Application+Automation+Tools>.

To install the Jenkins plugin:

1. Navigate to **Manage Jenkins > Manage Plugins > Advanced** tab.
2. Under **Upload Plugin**, upload the attached or downloaded *.hpi* file.

3. After restarting the Jenkins server plugin, navigate to **Manage Jenkins > Manage Plugins**. The plugin should be listed in the **Installed** tab.

For additional information on installing Jenkins plugins, see: <https://wiki.jenkins-ci.org/display/JENKINS/Plugins#Plugins-Howtoinstallplugins>

3. Configuring the ALM Server Connection

1. On the Jenkins server home page, click the **Manage Jenkins** link on the left pane.
2. In the Manage Jenkins page, click **Configure System**.
3. In the **Configuration** tab, located the **Application Lifecycle Management** section.
4. Click **Add ALM server**, if no server is currently configured.
5. Enter an ALM Server URL. Format: `http://myserver.mydomain:8080/qcbin`

4. Installing Jenkins Plugin for Publishing Results

Install the appropriate Jenkins plugin for your testing framework. The following testing frameworks are supported:

- Junit: <https://wiki.jenkins-ci.org/display/JENKINS/JUnit+Plugin>
- NUnit: <https://wiki.jenkins-ci.org/display/JENKINS/NUnit+Plugin>
- TestNG: <https://wiki.jenkins-ci.org/display/JENKINS/testng-plugin>

For example, to configure the JUnit plugin:

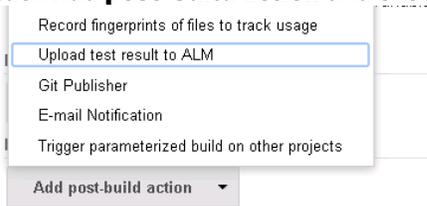

Note: Alternatively, instead of installing a Jenkins plugin for publishing results, you can copy JUnit/NUnit/TestNG test results to your build directory.

For example, to copy JUnit test results, execute the XCOPY command:

5. Configuring the “Upload Test result to ALM” Post-Build Action

1. Click **Add post-build action** and choose **Upload test result to ALM**.

2. Complete the post-build actions. For help on any field, click  to the right of the field. For example:

Post-build Actions

 **Upload test result to ALM**

ALM server	<input type="text" value="ALM 12.21"/>
User name	<input type="text" value="alm_user"/>
Password	<input type="password" value="*****"/>
Domain	<input type="text" value="DOMAIN_NAME"/>
Project	<input type="text" value="Project_name"/>
Testing Framework	<input type="text" value="JUnit"/>
Testing Tool	<input type="text" value="Selenium"/>
Test Folder	<input type="text" value="Test Plan Folder\Unit tests\Exported results"/>
Test set Folder	<input type="text" value="Test Set Folder\Unit tests\Exported results"/>
Testing result file	<input type="text" value="**/junitResult.xml"/>
Jenkins server URL	<input type="text" value="http://jenkinsservername:8080/"/>

6. Building a Project

Build your Jenkins project with tests.

You can see the plugin's details in the build console output:

```
INFO: 'Upload test result to ALM' Post Build Step is being invoked.
INFO: 1 test result file found.
INFO: Start to upload C:\Program Files (x86)\Jenkins\jobs\ALM Plugin - test
INFO: Start to parse file: C:\Program Files (x86)\Jenkins\jobs\ALM Plugin -
INFO: parse resut file succeed.
INFO: Start to login to ALM Server.
Logged in successfully to ALM Server
INFO: Checking test folder...
INFO: Checking testset folder...
INFO: Uploading ALM Entities...
INFO: Uploaded C:\Program Files (x86)\Jenkins\jobs\ALM Plugin - test - JUnit
INFO: 'Upload test result to ALM' Completed.
```

7. Viewing Result in ALM

When the Jenkins job completes, the results are synchronized with ALM. As part of the synchronization process, ALM creates entities in the following modules:

- **Test Lab module:** Test sets and test instances
- **Test Plan module:** Tests
- **Test Run module:** Run results

Note: If the tests and test set entities already exists in ALM in the same Test Lab and Test Plan folders, only the test runs will be created.
