

HP Universal CMDB

Software Version: Content Pack 15.00 (CP15)

Release Notes for HP UCMDB/Universal Discovery Content Pack 15

Document Release Date: June 2015 (Third Edition)
Software Release Date: January 2015

Legal Notices

Warranty

The only warranties for HP products and services are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. HP shall not be liable for technical or editorial errors or omissions contained herein.

The information contained herein is subject to change without notice.

Restricted Rights Legend

Confidential computer software. Valid license from HP required for possession, use or copying. Consistent with FAR 12.211 and 12.212, Commercial Computer Software, Computer Software Documentation, and Technical Data for Commercial Items are licensed to the U.S. Government under vendor's standard commercial license.

Documentation Updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition of a document, go to: <https://softwaresupport.hp.com/>.

This site requires that you register for an HP Passport and to sign in. To register for an HP Passport ID, click **Register** on the HP Support site or click **Create an Account** on the HP Passport login page.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your HP sales representative for details.

Document Changes

Version	Changes
CP15 (2nd Edition, March 2015)	<ul style="list-style-type: none">• Clarified that Mac OS 10.9 is supported• Added documentation about the AM Generic Adapter enhancement to the "Enhancement Requests" section. For details, see QCCR1E115919.
CP15 (3rd Edition, June 2015)	Clarified the supported UCMDB versions in "System Requirements".

Support

Visit the HP Software Support site at: <https://softwaresupport.hp.com>.

This website provides contact information and details about the products, services, and support that HP Software offers.

HP Software online support provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the support website to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Download software patches
- Manage support contracts
- Look up HP support contacts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

Most of the support areas require that you register as an HP Passport user and to sign in. Many also require a support contract. To register for an HP Passport ID, click **Register** on the HP Support site or click **Create an Account** on the HP Passport login page.

To find more information about access levels, go to: <https://softwaresupport.hp.com/web/softwaresupport/access-levels>.

HP Software Solutions Now accesses the HPSW Solution and Integration Portal website. This site enables you to explore HP Product Solutions to meet your business needs, includes a full list of Integrations between HP Products, as well as a listing of ITIL Processes. The URL for this website is <http://h20230.www2.hp.com/sc/solutions/index.jsp>.

HP UCMDB Content Pack Release Notes

This document provides information about HP Universal CMDB (UCMDB) and Universal Discovery Content Pack 15.

What's New in Content Pack 15

This section provides information about new features and enhancements to Content Pack 15.

Support Matrix

- Hyper-V 2012 is supported by Hyper-V Topology by Shell and Hyper-V Topology by WMI jobs.
- F5 BIG-IP LTM v10 and v11 is supported by F5 BIG-IP LTM by SNMP job. A shell-based discovery job F5 BIG-IP LTM by Shell is added.
- NNMi 10.x is supported by NNMi integration jobs.
- Network Automation 10.x is supported by the Pull Topology from HP Network Automation integration.
- Oracle 12c is supported by the database discovery jobs.
- Microsoft SQL Server 2008 R2.
- Microsoft SQL Server 2012.
- Microsoft SQL Server 2014.
- Mac OS 10.9.
- The Storage Essentials integration is enhanced to support SE version up to 9.70.
- Windows 8.1 and Windows Server 2012 R2 for script-based inventory discovery.

Universal Discovery Inventory

- Native MSI package for the Windows x64 Agent.
- Native x64 Scanner and Agent for Linux.
- A parameter is added to the Inventory Discovery by Scanners job so that the job can run the scanners with the debug/trace log options and the job can retrieve the scanner log.
- Along with the pre-scan and post-scan scripts, the Inventory Discovery by Scanners job can deploy extra data or executable files.
- The Inventory Discovery by Scanner job is able to use the UNIX user account which has an NFS-mounted home directory.

SNMP Discovery Improvements

- The Host Resources by SNMP job is enhanced.
- The job can discover the modules of complex network devices such as switches (Fans, Environment Sensors, Power Supply, Chassis).
- More device types are discovered, such as network printers, IP phones, etc.
- Added a new Rulebase Support Report to support rulebase creation and maintenance. View the report at Modeling > Reports > expand Network node.

Storage

- SMI-S Discovery supports EMC namespace for EMC/VMAX storage, including EMC Ionix Control Center and EMC Symmetrix Management Console (SMC).
- SMI-S Discovery supports LsiArray13 for NetApp E-Series storage devices.

Integration

- The HP OneView integration can populate data from HP OneView into HP UCMDB by REST API.
- AM Generic Adapter is built on top of the Generic Adapter framework to integrate between Asset Manager and UCMDB with support of bi-direction data flow.

Discovered Applications

- IBM WebSEAL version 6, 7, 8 can be discovered via Shell-based protocols or using Web Services. The WebSEAL application is also officially known as TAM (Tivoli Access Manager) in the earlier versions. The product was later renamed to ISAM (IBM Security Access Manager).
- Cisco UCS related jobs can discover Cisco UCS systems and their components.

Other

- The Edition attribute is added to the Running Software CI type. The DB Connection by SQL job can discover the edition of the MS SQL Server.
- IP MAC Harvesting by SNMP job supports CISCO IP-MIB.
- Oracle Database Lightweight Discovery can connect to Oracle databases that have a discovered IpServiceEndpoint.
- Sybase discovery supports encrypted password for the SQL protocol.

Enhancement Requests

Global ID	Description
QCCR1H72386	Sybase Discovery mechanism is enhanced to discover the segments of Sybase databases.
QCCR1H78534	Support for F5 BIG-IP Local Traffic Manager (LTM) v11 and v10.

Global ID	Description
QCCR1H81272	x64 UD agent and scanner are available to be used with x64 Linux servers.
QCCR1H85131	Support for EMC/VMAX with SMI-S pattern.
QCCR1H87428	Sybase Discovery adds relevant links to devices.
QCCR1H88198	Documentation for Range IPs by ICMP job.
QCCR1H88396	Performance is enhanced for Oracle Database Connection by SQL job.
QCCR1H88924	Support for Oracle 12c.
QCCR1H89595	Host Connection By Shell job is enhanced to discover the full version of AIX hosts.
QCCR1H89596	Universal Discovery Agent TCP port number is included in portNumberToPortName.xml.
QCCR1H89617	Resolved issue with the pfiles command causes Solaris 10 systems with Oracle to hang
QCCR1H90343	Added Version attribute for Sybase CI.
QCCR1H90452	Support for VMware Virtual Disk CIs using VI Java API.
QCCR1H91293	Edition attribute for Running Software CIs discovered for Microsoft SQL Server.
QCCR1H91535	Support for WebSEAL discovery.
QCCR1H92226	Support for Windows 8.1 and Windows Server 2012 R2.
QCCR1H92363	Support for MSSQL Server 2012 discovery.
QCCR1H92568	Enhanced Sybase Deep Dive discovery jobs to support DB protocol credentials caching.
QCCR1H93114	The Host Connection by Shell and Host Connection by WMI jobs can discover the NodeRole attribute for Windows 2012 servers.
QCCR1H93532	Support for Hyper-V on Windows 2012.
QCCR1H93978	Host Connection by SNMP discovers serial numbers for Juniper devices.
QCCR1H94000	Sybase discovery supports encrypted password for SQL protocol.
QCCR1H94394	Resolved issue when some IP addresses collected by the scan file caused

Global ID	Description
	reconciliation issues.
QCCR1H94571	Supports discovery of certain SNMP devices that can be discovered by DDMI.
QCCR1H94825	Added the display resolution, the color depth and the refresh rate attributes of the Graphics Adapter CI.
QCCR1H94961	Enhanced Inventory Discovery for LPAR and Xen.
QCCR1H95143	Support for NetApp vFiler discovery.
QCCR1H95415	Added LDOM name to the display label of the LDOM configuration document.
QCCR1H95734	Resolved issue with Allow Deletion functionality in Atrium Push Integration.
QCCR1H96277	Resolved the issue when the scan_file_last_downloaded_time attribute of the InventoryScanner CI is not populated when the scanner-based inventory is done using the manual scanner deployment mode.
QCCR1E115919	Added a DB Owner field for creating new credentials for Asst Manager through the AM Generic Adapter, so that the DB owner can be specified in the integration point and used for both push and population scenarios.

System Requirements

- CP 15 can be installed on:
 - UCMDB 10.11 CUP3 (or later CUP version)
 - UCMDB 10.20 (or with a CUP on top of 10.20)

Note: The following new adapters in CP15 cannot work with 10.11 CUP3 (or a later CUP on top of 10.11):

- ASM adapters
- Top-Down Discovery adapters
- AM Generic Adapter
- Service Manager Enhanced Adapter

These new adapters are built on the new Unified Generic Adapter framework available with UCMDB 10.20, therefore they can only work properly with 10.20 (with or without a CUP on top of 10.20).

Old adapters, such as SMAadapter, can be used in parallel and still work with 10.20 (with or without a CUP on top of 10.20).

Important Note:

- Before you deploy Content Pack 15.00 on top of version 10.20, you must install version 10.20 on the UCMDB, UD, and CM servers, and deploy version 10.20 Data Flow Probes. Do not deploy Content Pack 15.0 while you are still updating the Data Flow Probes.
- Before you deploy Content Pack 15.00 on top of version 10.11, you must install 10.11 CUP3 (or a later CUP) on the UCMDB, UD, and CM servers, and deploy version 10.11 Data Flow Probes. Do not deploy Content Pack 15.0 while you are still updating the Data Flow Probes.

For a complete list of system requirements, see the *HP Universal CMDB Support Matrix* document available from the UCMDB Online Help home page.

Content Pack Installation

The following procedure explains how to install Content Pack 15.00 for HP Universal CMDB.

Note: Rolling back the installation is not supported as it can lead to system inconsistencies. If you are upgrading from earlier versions of the content pack, it is strongly recommended to ensure that you have backed up your database.

1. Prerequisites

- The UCMDB Server must be running when you install the Content Pack.
- During installation, Setup may restart the Probe to load the new content jar file.

2. Retrieve the Content Pack 15.00 ZIP file

The name of the installation file is **CP15_installation.zip**. This file is located on the HP Live Network Web site (<https://hpln.hp.com/>).

The ZIP file contains the following resources:

- Packages
- Online help
- The *HP Universal CMDB Discovery and Integration Content Guide* PDF files.
- Permissions.pdf

3. Extract packages from the Content Pack 15.00 ZIP file

Unpack the contents of the ZIP file to **C:\hp\UCMDB\UCMDBServer**.

4. Back up existing packages

- a. Launch a Web browser and enter the following address:

`http://<FQDN or IP address>:8080/jmx-console`

where **<FQDN or IP address>** is the machine on which UCMDB is installed. Log in using the JMX console authentication credentials.

- b. Click the UCMDB:service=Packaging Services link.
- c. In the JMX MBEAN View page, locate the following JMX function: **exportPackages ()**.
- In the **customerID** field, enter **1**.
 - In the **packagesNames** field, leave this field empty to export all packages.
 - In the **outputDir** field, enter the full path to a directory where UCMDB should place the backed-up packages, for example, **C:\hp\UCMDB\UCMDBServer\content\my_packages_backup**. The directory is created automatically.
 - In the **userOnly** field, select **False** to export all packages (and not only the user-created packages).
- d. Click **Invoke**.

- e. Verify that all relevant packages have been backed up to the folder mentioned in the previous step, and that there are no errors in the **mam.packaging.log** file, located in **hp\UCMDB\UCMDBServer\runtime\log**.

5. Install Content Pack 15.00

You can install the Content Pack from the HP Universal CMDB user interface or using the JMX Console.

From HP Universal CMDB:

- a. Log in to the UCMDB.
- b. Access the **Package Manager (Administration > Package Manager)**.
- c. On the toolbar, click the **Install Content Pack** button.
- d. In the Install Content Pack dialog box that opens, select the required version of the Content Pack and click **Install**.

Using the UCMDB JMX Console:

- a. Log in to the UCMDB JMX-Console (**<ucmdb-server>:8080/jmx-console**).
- b. Open **UCMDB > Content Pack Services**.
- c. Invoke **displayAvailableContentPackVersions** to see available versions of the Content Pack.
- d. Enter the required version in the version field, and invoke **installContentPack**.

6. Verify installation

Verify that there are no errors in the **mam.packaging.log** file, located in **hp\UCMDB\UCMDBServer\runtime\log**.

7. If you are installing the Content Pack on a High Availability system, copy all files from the following folder on the active UCMDB server to the same folder on the passive UCMDB server:
C:\hp\UCMDB\UCMDBServer\runtime\fcmdb\CodeBase

Discovery Knowledge Content

Discovery Knowledge content updates are regularly released by Hewlett-Packard and contain Discovery Rules content files and Software Application Index (SAI) content files. All content updates that were

included in HP Discovery and Dependency Mapping Inventory content updates are also included in Universal Discovery.

Discovery Rules contain information to identify hardware devices in your environment. Discovery Rules determine the device's operating system, application, device family, and model. Then, the Discovery Rules Engine assigns a device type to your device model.

SAI files contain information to identify applications on a discovery node. Universal Discovery employs a number of installed software application recognition techniques, including file-based recognition, version data, and installed package rule-based recognition. The data that is required for this recognition to work is stored in the application library files (SAI).

Note: To import the most recently released SAI files that is released after version 10.20 of HP Universal CMDB into UCMDB, see the *How to Import DDMI SAI's to UCMDB* section in the *DDMI to Universal Discovery Migration Walkthrough Guide*.

Recently released content that is currently included in this version of Universal Discovery can be found on the Universal Discovery Community (<https://hpln.hp.com//group/universal-discovery/>) website on the HP Live Network.

Note: You need an HP Passport user name and password to log in to this site.

Content Pack Documentation Updates

To read the latest versions of the relevant documents, access the following URLs:

- http://SERVER_NAME:PORT/ucmdb-ui/docs/DDMContent.jsp – Discovery and Integration Content Guide
- http://SERVER_NAME:PORT/ucmdb-ui/docs/permissions.jsp – the Permissions document

Content Pack Notes and Limitations

Limitations

- Child CIs are no longer included in reconciliation rules when considering identification for Business Applications. An optional identifier based on the ID (App_ID) can be used to uniquely identify each Business Application CI. Business Applications that are synced from external sources must have a

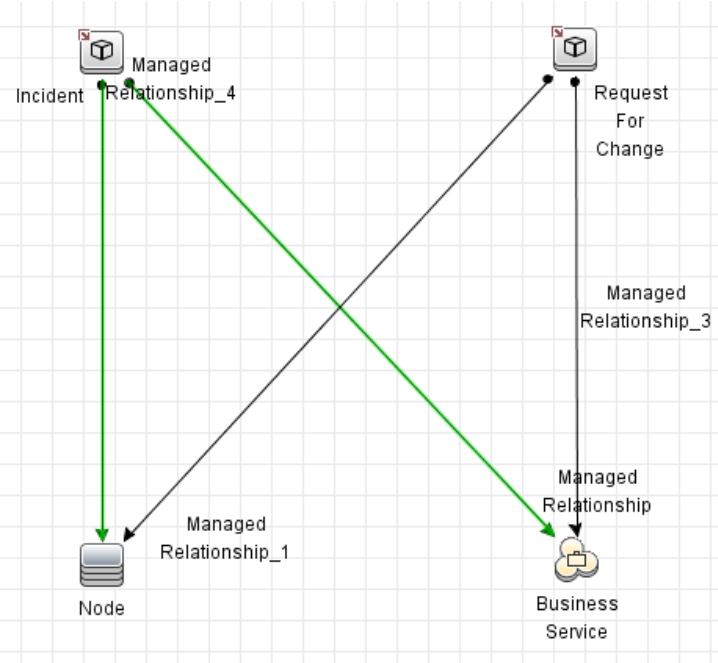

unique name or ID in order to be included during data synchronization. Note that multiple Business Applications with the same name and no ID will not be synchronized.

Additional CI types for which child CIs are no longer included in reconciliation rules are Business Process, Business Service, CI Collection, Business Transaction Flow, and Dynamic Node Group. No optional identifier can be specified for these CI types.

- Data population into UCMDB using ServiceNow integration jobs fail because a package called "suds" is missing. To fix this issue, download and install a patch on the Data Flow Probe to supply the missing package as follows:
 - a. Download the **ServiceNow_pull_integration_patch.zip** file from the **<UCMDB_installation_folder>\DataFlowProbe\runtime\probeManager\discoveryResources\Service-Now-Pull** folder.
 - b. Extract the patch archive into the Data Flow Probe's installation folder. As a result, the **<Probe_installation_folder>\jython\suds** folder is created, and two files (**<Probe_installation_folder>\jython\httplib.py** and **<Probe_installation_folder>\jython\urllib2.py**) are updated. You do not need to restart the Data Flow Probe.
- The **vCloud Director by vCloud API** and **vCloud Director URL by vCloud API** do not automatically discover VMware vCloud, because the **httpcore.jar** and **httpclient.jar** files no longer exist in the **<Probe>/content/lib** folder. To fix this issue, copy the **httpcore.jar** and **httpclient.jar** files from the **<Probe>/discoveryResources/http** folder to the **<Probe>/content/lib** folder.

Service Manager Integration Known Issues and Limitations

Global ID	Description	Workaround
QCCR1E119483	Infrastructure Service - Containment > [Application Service, Business Service] relationships cannot be correctly synchronized to UCMDB through population.	None
QCCR1E119671	NodeRole values are not merged when merging CIs during population.	None
QCCR1E119349	When two computers share the same value for the DiskDevice, FileSystem, Interface, or CPU attribute, after running a computer population job, one child CI is created and shared by the two computers. The expected behavior is that two separate child CIs are created for the two computers.	None

Global ID	Description	Workaround
QCCR1E118141	Cannot disable a field that does not have a mapping entry configured in the federation configuration file (smFedConf.xml).	None
QCCR1E118095	<p>UCMDB cannot get the results for a federation TQL query on two UCMDB CI types when each of the CI types has a relationship with two or more external CI types (such as Incident and RequestForChange).</p> <p>See the following figure for an example.</p>  <pre> graph TD Incident[Incident] -- Managed Relationship_4 --> Node[Node] Incident -- Managed Relationship --> BusinessService[Business Service] RequestForChange[Request For Change] -- Managed Relationship_1 --> Node RequestForChange -- Managed Relationship_3 --> BusinessService </pre>	
QCCR1E119726	Structure fields are not supported for pushing CIs from UCMDB to Service Manager.	None
QCCR1E119141	The 'Ignore on null' option is not supported for data push from UCMDB to Service Manager.	None
QCCR1E117760	<p>The Visual Mapping tool is not disabled for some out-of-the-box XML mapping scripts in which the external class cannot be displayed in the External Class Model pane.</p> <p>Such out-of-the-box mapping scripts include:</p> <ul style="list-style-type: none"> • CLIP Downtime Population mapping script • Relationship push and population mapping scripts 	None

Global ID	Description	Workaround
	<ul style="list-style-type: none"> Federation mapping scripts 	
QCCR1E118871	If a TQL query has different exposed fields for the child CI types of the root, the Visual Mapping tool cannot display all of the exposed fields. As a result, you cannot configure mapping for fields that are not displayed by using a drag and drop in the Visual Mapping interface.	Configure mapping for the fields directly in the XML editor. Alternatively, split the query into multiple ones and then use the Visual Mapping tool.
QCCR1E119778	Federation does not work on the Search CIs pane when the CI is related to Incident and Problem.	
QCCR1E119548	CI relationship deletions cannot be synchronized to UCMDB through population.	

Updates to Normalization Rules

Fixed Defects for Content Pack 15.00

The following table lists the defects that were fixed in HP UCMDB Content Pack 15.00.

CR Global ID	Description
QCCR1E100679	Fixed an issue that occurred when text values of enumerated field in UCMDB were not pushed to AM.
QCCR1E107529	Fixed an issue that occurred when Oracle LMS mapping puts the wrong data into lUseCount for Oracle applications.
QCCR1E109377	Fixed an issue that occurred when the Push Adapter cannot distinguish the VM and Physical machine when both have the same IP_Host_Name and Workgroup.
QCCR1E109937	Fixed an issue that occurs when pushing data from UCMDB to AM multiple times and duplicate records are created.
QCCR1E110525	Fixed an issue that occurred when the software installation records could not be pushed in the amSoftwareInstalled table while enabling action-on-delete on pushAdapter.
QCCR1E112522	Fixed an issue that occurred when Owner parameter for Oracle was missing from connection definition in Push Adapter.
QCCR1E115656	Fixed an issue that occurred when configuring the AM Push Adapter adapter to select Primary IP address.
QCCR1E117305	Fixed an issue that occurred when the port setting for SQL Server is not handled correctly.
QCCR1H70786	Fixed an issue that occurred when the IBM LPAR Client Adapter is used and the discovered name is wrong.
QCCR1H79041	Fixed an issue that occurred when MQ by EView results triggers the following error message: "Attribute queue_type of wrong type;should be ibmmq_queue_types but reported Unknown".
QCCR1H84265	Fixed an issue that occurred when HP SIM integration is used.
QCCR1H86640	Fixed an issue that occurred when Host Applications by WMI job cannot report software Installed Date.

CR Global ID	Description
QCCR1H87613	Fixed an issue that occurred when duplicate CIs with different CI Types are created.
QCCR1H89205	Fixed an issue that occurred when DB Connection by Shell job failed to return the correct port information.
QCCR1H89426	Fixed an issue that occurred when the Aperture Integration job failed with fuse errors.
QCCR1H89707	Fixed an issue that occurred when JDBC data sources were incorrectly identified.
QCCR1H89756	Fixed an issue that occurred when the VMware vMotion Monitor by VIM job ran and a UnicodeEncodeError event is returned intermittently.
QCCR1H90007	Fixed an issue that occurred when discovery error classification lacked descriptive information.
QCCR1H90163	Fixed an issue that occurred when the XML Push Adapter adapter runs and a UTF8 encoding problem occurs.
QCCR1H90183	Fixed an issue that occurred when the JBoss Discovery by Shell job failed to discover JBoss instances.
QCCR1H90434	Fixed an issue that occurred when the HP Service Guard discovery job failed to discover clusters that contain double dashes in the names.
QCCR1H90739	Fixed an issue that occurred when the Data Push into Atrium job sometimes failed and returned the following error message: "TypeError: com.bmc.cmdb.api.CMDBInstance(): 1st arg can't be coerced to com.bmc.cmdb.api.CMDBClassNameKey".
QCCR1H91173	Fixed an issue that occurs when the ASCII code page failed to encode some characters when running the Inventory Discovery job.
QCCR1H91175	Fixed an issue that occurred when some device OIDs are missing.
QCCR1H91306	Fixed an issue that occurred when MS NLB by NTCMD or UDA discovery caused the failover cluster to crash.
QCCR1H91320	Fixed an issue that occurred when right clicking on PowerDistributionUnit CI instance and there was no response from the system.
QCCR1H91470	Fixed an issue that occurred when MS SharePoint CI contain corrupt Hungarian characters.

CR Global ID	Description
QCCR1H91794	Fixed an issue that occurred when the Universal Discovery Agent failed to reinstall on UNIX machines.
QCCR1H91834	Fixed an issue that occurred when an error was returned even though use_lsof and use_sudo in the Properties tab of the DB Connections by Shell job were well populated with the true value.
QCCR1H91860	Fixed an issue that occurred when the Host Applications by Shell job runs and the name attribute for SAP ABAP Application Server is not correct.
QCCR1H91885	Fixed an issue that occurred when the AtriumPushAdapter adapter encountered encoding problems.
QCCR1H91935	Fixed an issue that occurred when the Merge Clustered Software job failed to merge JBoss Cls.
QCCR1H92159	Fixed an issue that occurred when discusge.exe encountered problems when consuming huge amounts of RAM.
QCCR1H92303	Fixed an issue that occurred when the Host Resources Applications job failed to discover running software for vCenter 5.x.
QCCR1H92306	Fixed an issue that occurred when the SunCluster Discovery job failed. This issue occurred because of DNS resolution problems.
QCCR1H92374	Fixed an issue that occurred when the Service Guard Cluster Topology by TTY job stopped at the failure of the nslookup discovery.
QCCR1H92376	Fixed an issue that occurred when the Inventory Discovery by Scanner job encountered an error on AIX.
QCCR1H92431	Fixed an issue that occurred when the Oracle Rac Topology by Shell job is unable to resolve IPs properly if there is an alias defined.
QCCR1H92476	Fixed an issue that occurred when the Universal Discovery Agent cannot be reached from UCMDB after DDMI runs the scanner.
QCCR1H92508	Fixed an issue that occurred when migration from DDMI to Universal Discovery failed on machines that are running Korean OS.
QCCR1H92531	Fixed an issue that occurred when the DiscoveredVendor attribute for Node CI changes unexpectedly.
QCCR1H92588	Fixed an issue that occurred when the Host Resources by Shell job failed to discover

CR Global ID	Description
	Websphere AS.
QCCR1H92663	Fixed an issue that occurred when the Host Fingerprint using Nmap job does not parse nmap.xml properly.
QCCR1H92868	Fixed an issue that occurred when the IBM LPAR job and the VIO Server Topology by Shell job failed on Linux machines.
QCCR1H93089	Fixed an issue that occurred when the MS Cluster by NTCMD or UDA job generated duplicate nodes in UCMDB.
QCCR1H93090	Fixed an issue that occurred when mapping the scan file attributes to UCMDB CI attributes.
QCCR1H93097	Fixed an issue that occurred when the TIBCO EMS by Shell Discovery job encountered problems using Perl-based discovery.
QCCR1H93100	Fixed an issue that occurred when Host Applications by Shell job did not report the build level of Microsoft SQL Server.
QCCR1H93182	Fixed an issue that occurred when Serial Number values of 3PAR V400 SAN Storage and of 3PAR V800 SAN Storage are not discovered.
QCCR1H93288	Fixed an issue that occurred when the Host Applications by Shell job creates only one (1) CI when multiple software versions exist.
QCCR1H93299	Fixed an issue that occurred when running the SCCM 2012 integration job.
QCCR1H93347	Fixed an issue that occurred when the Range IPs by Nmap job failed to create all IPs that belonged to the range.
QCCR1H93353	Fixed an issue that occurred when SAP Message Server and SAP Enqueue Server attributes were not discovered.
QCCR1H93420	Fixed an issue that occurred when the Host Connection by Shell job failed to correctly parse MAC addresses and interface names that are associated with Nexus switches.
QCCR1H93455	Fixed an issue that occurred when the Inventory Discovery by Shell job failed to generate the shell CI and the IP Address CI.
QCCR1H93483	Fixed an issue that occurred when the LDOM Discovery job encounters problems when discovering Solaris 11.

CR Global ID	Description
QCCR1H93496	Fixed an issue that occurred when the HP IVM by Shell job failed.
QCCR1H93547	Fixed an issue that occurred when the Host Connection by SNMP job incorrectly identifies Cisco load balancer devices as switches.
QCCR1H93575	Fixed an issue that occurred when SNMP discovery of a new switch failed.
QCCR1H93576	Fixed an issue that occurred when Normalization Rules encounters problems when prioritizing between competing rules.
QCCR1H93613	Fixed an issue that occurred when the JBoss Discovery by Shell job runs.
QCCR1H93633	Fixed an issue that occurred when application_ip is not discovered correctly for a MS Cluster.
QCCR1H93645	Fixed an issue that occurred when the Scanner stops when trying to access the MSI file.
QCCR1H93647	Fixed an issue that occurred when the DB Connection by Shell job failed to discover the named instance correctly.
QCCR1H93672	Fixed an issue that occurred when Universal Discovery Agent starts up and encounters the "timeout set with no valid URL0 given" error.
QCCR1H93692	Fixed an issue that occurred when Red Hat Cluster Suite Discovery did not support RHEL 6.5.
QCCR1H93714	Fixed an issue that occurred when the JBoss Connections by JMX job incorrectly discovers JBoss Application Server.
QCCR1H93799	Fixed an issue that occurred when Host Resources and Applications by Shell job encounters a problem when discovering JBoss.
QCCR1H93884	Fixed an issue that occurred when the Oracle Application Server by Shell job failed to find wsdl files in application-deployments subfolder.
QCCR1H93937	Fixed an issue that occurred when the SMS adapter failed to merging existing interface CIs.
QCCR1H94091	Fixed an issue that occurred when Oracle VM for x86 by Manager Main CLI job encountered problems.
QCCR1H94122	Fixed an issue that occurred when the wrong Central Instance attribute was reported for the SAP ABAP Application Server.

CR Global ID	Description
QCCR1H94141	Fixed an issue that occurred when redundant callhome requests caused extremely large number of unsent results on Probes.
QCCR1H94144	Fixed an issue that occurred when the Solaris Zones by TTY job reported no results for Solaris 11 Server.
QCCR1H94367	Fixed an issue that occurred when the LDOM Discovery job reported the wrong CPU.
QCCR1H94442	Fixed an issue that occurred when two monitors of the same brand or model used on the same computer were merged.
QCCR1H94456	Fixed an issue that occurred when the Veritas Cluster by Shell discovery job does not discover IP addresses for Cluster Resource Groups.
QCCR1H94463	Fixed an issue that occurred when the Host Applications by Shell job failed to resolve hostname from etc/hosts file.
QCCR1H94498	Fixed an issue that occurred when Scan BIOS SOURCE is very long giving errors
QCCR1H94607	Fixed an issue that occurred when the Host Resources by Shell job encountered problems discovering DB2 databases.
QCCR1H94663	Fixed an issue that occurred when the Webservice Connections by UDDI registry job encountered problems when using a given URL.
QCCR1H94664	Fixed an issue that occurred when the Serviceguard discovery could not create Cls for clusters with names containing two dashes.
QCCR1H94668	Fixed an issue that occurred when the Process Layer2 Saved Files job did not run successfully on probes.
QCCR1H94705	Fixed an issue that occurred when Scanner gets incorrect values for the hwCPUSpeedRated field.
QCCR1H94773	Fixed an issue that occurred when Nortel switch devices are missing serial numbers.
QCCR1H94795	Fixed an issue that occurred when the memory size attribute of Windows Cls imported from SCCM was in KB rather than in MB.
QCCR1H94817	Fixed an issue that occurred when memory, processes and disks on VMKernel 5.5 are not discovered.
QCCR1H94834	Fixed an issue that occurred when the Host Connection By Shell job failed and returned the following error message: "Failed getting machine OS type".

CR Global ID	Description
QCCR1H94852	Fixed an issue that occurred when serial numbers for F5 network devices are not discovered.
QCCR1H94888	Fixed an issue that occurred when the Import Topology from Database job failed when discovering MySQL and returned the following error message: "Unknown database type".
QCCR1H94895	Fixed an issue that occurred when Normalization Rules did not contain information about IBM models.
QCCR1H94919	Fixed an issue that occurred when the Host Applications by Shell job incorrectly merges two SAP Systems with the same name.
QCCR1H94954	Fixed an issue that occurred when the Migrate DDMI Agent job encounters a problem for UNIX.
QCCR1H94985	Fixed an issue that occurred when the Host Applications by Shell job failed to recognize Sybase databases.
QCCR1H95049	Fixed an issue that occurred when when DB Connection by Shell job returns errors.
QCCR1H95065	Fixed an issue that occurred when License Counter is not correct for VMware VirtualCenter.
QCCR1H95068	Fixed an issue that occurred when IP addresses were not discovered.
QCCR1H95245	Fixed an issue that occurred when the Host Resources by Shell job did not discover all DB2 instances with out-of-the-box scripts.
QCCR1H95246	Fixed an issue that occurs when data in some switches and routers were missing and discovery encountered problems.
QCCR1H95279	Fixed an issue that occurred when SAP plugins failed to discover a SAP System's database because of a badly-formed hexadecimal UUID string.
QCCR1H95323	Fixed an issue that occurred when the interface name that was longer than 8 characters could be truncated while using netstat -in on HP-UX systems.
QCCR1H95331	Fixed an issue that occurred when the Service Now integration failed and external ID Mapping Factory failed to update.
QCCR1H95429	Fixed an issue that occurred when Logical CPU values are not counted correctly in UCMDB for AM Push Adapter adapter.

CR Global ID	Description
QCCR1H95463	Fixed an issue that occurred when the VMware vCenter job connects using HTTPS regardless of the credential setting.
QCCR1H95492	Fixed an issue that occurred when the default permission of the aioptionrc file was set to 666.
QCCR1H95692	Fixed an issue that occurred when the F5 BIG-IP LTM by SNMP job failed to discover if one of the retrieved IP addresses is 0.0.0.0.
QCCR1H95696	Fixed an issue that occurred when the Host Resources by Shell job failed to discover the MemorySize field values.
QCCR1H95737	Fixed an issue that occurred when the discovered_model field is not populated for HP-UX machines.
QCCR1H95866	Fixed an issue that occurred when Universal Discovery Agent failed to discover installed software correctly.
QCCR1H95871	Fixed an issue that occurred when the SAP ABAP Connection by SAP JCO job runs and an IndexOutOfBoundsException error is returned.
QCCR1H95884	Fixed an issue that occurred when HP SIM integration with SIM version 7.3.0 failed.
QCCR1H95975	Fixed an issue that occurred when the Scanner takes a long time to look up DNS names for Windows machines.
QCCR1H96086	Fixed an issue that occurred when UCMDB incorrectly discovered JBoss instance names.
QCCR1H96129	Fixed an issue that occurred when the XML Enricher failed to parse certain data correctly and an java.lang.IllegalArgumentException is returned.
QCCR1H96131	Fixed an issue that occurred when the ServiceNow Pull Integration job fails to import more than one type of link.
QCCR1H96181	Fixed an issue that occurred when LPAR Resources discovery did not run successfully on servers that were running EView.
QCCR1H96219	Fixed an issue that occurred when SAP plugins did not correctly perform variable resolution in SAP profiles.
QCCR1H96304	Fixed an issue that occurred when Push data to CA needs update operation if the same data has already existed in CA.

CR Global ID	Description
QCCR1H96329	Fixed an issue that occurred when using the pfiles command for Scanner on Solaris machines.
QCCR1H96355	Fixed an issue that occurred when the normalization rules were processed for vmware_esx_server.
QCCR1H96511	Fixed an issue that occurred when the NNMI integration job failed.
QCCR1H96513	Fixed an issue that occurred when the NNMI integration job failed and the "socket closed" error is returned.
QCCR1H96552	Fixed an issue that occurred when the VMware vCenter Topology by VIM job returns the wrong serial number.
QCCR1H96588	Fixed an issue that occurred when the HP Network Automation 9.22 integration job failed.
QCCR1H96683	Fixed an issue that occurred when Normalization Rules did not contain information for IBM or Fujitsu models.
QCCR1H96684	Fixed an issue that occurred when the Host Applications by Shell job failed to parse process parameters correctly.
QCCR1H96693	Fixed an issue that occurred when the Host Application by Shell job encountered problems with SQL Server port numbers for Windows 2003 machines.
QCCR1H96862	Fixed an issue that occurred when the StorageEssentials integration job is reporting fconnect links between unrelated CIs.
QCCR1H96882	Fixed an issue that occurred when the Installed Software installation date was not populated.
QCCR1H96923	Fixed an issue that occurred when Python libraries did not support Universal Discovery Agent properly.
QCCR1H96969	Fixed an issue that occurred when the J2EE WebSphere by Shell or JMX job did not allow new trigger CIs.
QCCR1H97040	Fixed an issue that occurred when the Host Applications by Shell job failed to recognize MS SQL databases.
QCCR1H97085	Fixed an issue that occurred when the Inventory Discovery by Scanner job failed and an exception was returned.

CR Global ID	Description
QCCR1H97174	Fixed an issue that occurred when SAP Mastercomponent Version is not discovered.
QCCR1H97227	Fixed an issue that occurred when the IBM HMC by Shell job did not perform as expect when the remote machine is in the Incomplete state.
QCCR1H97233	Fixed an issue that occurs when the NNMi Integration job does not build containment links between interface and IP.
