## Documentation Updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition of a document, go to the following URL and sign-in or register: <https://softwaresupport.hp.com/group/softwaresupport>

Use the Search function at the top of the page to find documentation, whitepapers, and other information sources. To learn more about using the customer support site, go to: [https://softwaresupport.hp.com/documents/10180/14684/HP\\_Software\\_Customer\\_Support\\_Handbook/](https://softwaresupport.hp.com/documents/10180/14684/HP_Software_Customer_Support_Handbook/)

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your Hewlett Packard Enterprise sales representative for details.

## Introduction

Most of the instructions defined in this white paper are based on the HPE Propel 2.10 Administration Guide. See chapter Replacing Generated HP Propel SSL Certificates with CA-Signed Certificates (page 10 – 13). This document can be seen as an addendum on the official HPE Propel 2.10 Administration Guide.

## Documentation

HP Propel documentation can be found at <https://softwaresupport.hp.com/group/softwaresupport>.

You need to sign-in or register to use this site. Use the **Search** function at the top of the page to find documentation, whitepapers, and other information sources. To learn more about using the customer support site, go to:

[https://softwaresupport.hp.com/documents/10180/14684/HP\\_Software\\_Customer\\_Support\\_Handbook/](https://softwaresupport.hp.com/documents/10180/14684/HP_Software_Customer_Support_Handbook/)

For more information or to track updates for all HP Propel documentation, refer to the HP Propel Documentation List.

To help us improve our documents, please send feedback to [Propel\\_IE@hpe.com](mailto:Propel_IE@hpe.com).

## Preparation work

### Import Supplier certificates

Before changing the the Propel certificates, make sure the SSL integrations with the back end systems (like SM, CSA, OO or SAW) work correctly. This will help you to nail down SSL issues after you changed the Propel certificate. See the official Propel documentation how back end supplier certificates should be imported in Propel.

### Setup Suppliers

Configure Suppliers f.i. SM, CSA, SAW, start the aggregation, create a catalog and publish your items. Test the ordering and support request part. If all of this works, you know you can perfectly SSL integrate with your back end systems.

## Load the customer Certificate Authority (CA) into the Propel global Java keystore

1. Stop the HPE Propel services:

```
# propel stop
```

2. Initialize the SSL-tmp working directory

```
# cp -rp /opt/hp/propel-install/ssl-tmp /opt/hp/propel-install/ssl-tmp.orig
```

```
# cd /opt/hp/propel-install
```

```
# ./propel-ssl-setup.sh init
```

Note: this will recreate `/opt/hp/propel-install/ssl-tmp` and remove all existing files.

```
[root@propel210bx1-ssl propel-install]# ./propel-ssl-setup.sh init
----- init -----
Executing: ./propel-ssl-setup.sh init
Temporary directory created '/opt/hp/propel-install/ssl-tmp'
----- init exits with 0 -----
[root@propel210bx1-ssl propel-install]# █
```

```
# keytool -list -keystore /usr/lib/jvm/java-1.8.0-openjdk/jre/lib/security/cacerts  
-storepass changeit |grep mycompanyca
```

```
[root@propel210globiconssl ssl-tmp]# keytool -list -keystore /usr/lib/jvm/java-1.8.0-openjdk/jre/lib/security/cacerts -storepass changeit  
|grep mycompanyca  
mycompanyca, Apr 14, 2016, trustedCertEntry,
```

4. Backup the existing SSL configuration used by the Propel microservices (cf. their configuration files), most of the important SSL-related files are here:

```
# cd /opt/hp/propel  
# cp -rp security security.orig
```

These files will be removed or updated in a later step.

5. Optional – Only if your HPE Propel VM needs multiple hostnames, all of these name must appear in the certificate. This is achieved by using the Subject Alternative Names (SAN) attribute.

If it is necessary to include multiple hostnames, edit the file:

```
/etc/pki/tls/openssl.cnf
```

Ensure that it has entries like this:

```
# This is required for TSA certificates.  
# extendedKeyUsage = critical,timeStamping  
  
[ v3_req ]  
  
# Extensions to add to a certificate request  
  
basicConstraints = CA:FALSE  
keyUsage = nonRepudiation, digitalSignature, keyEncipherment  
subjectAltName = @alt_names  
  
[alt_names]  
DNS.1 = server1.example.com  
DNS.2 = mail.example.com  
DNS.3 = www.example.com
```

Important: the host name returned from the hostname command must also appear as one of the SAN entries in openssl.cnf.

## Prepare for a Certificate Signing Request (CSR)

In the following steps we'll generate the Certificate Signing Request (CSR) and Server Private Key pair.

6. Generate a Certificate Signing Request and Server Private Key pair, where **<FQDN>** is the fully-qualified domain name of your Propel host.

```
# cd /opt/hp/propel-install  
# ./propel-ssl-setup.sh generateSigningRequest "/C=BE/ST=Brussels  
DC/L=Brussels/O=Hewlett-Packard/OU=HPE Propel RnD/CN=<FQDN>"
```

Note: *SUBJECT* is the signing request subject in the slash-separated form. "CN" must be the last field in the subject and contain the fully qualified hostname of the HPE Propel VM. Enclose the subject in double quotes, such as: `"/C=US/ST=CA/L=San Jose/O=StartUpCompany/OU=Software/CN=mypropelserver.example.com"`

**f.i.:** `./propel-ssl-setup.sh generateSigningRequest "/C=BE/ST=Brussels DC/L=Brussels/O=Hewlett Packard Enterprise/OU=HPE Propel RnD CPE/CN=propel210bx1-ssl.hpeswlab.net"`

```
[root@propel210bx1-ssl propel-install]# ./propel-ssl-setup.sh generateSigningRequest "/C=BE/ST=Brussels DC/L=Brussels/O=Hewlett Packard Enterprise/OU=HPE Propel RnD CPE/CN=propel210bx1-ssl.hpeswlab.net"
----- generateSigningRequest -----
Executing: ./propel-ssl-setup.sh generateSigningRequest /C=BE/ST=Brussels DC/L=Brussels/O=Hewlett Packard Enterprise/OU=HPE Propel RnD CPE/CN=propel210bx1-ssl.hpeswlab.net
prop: /opt/hp/propel-install/ssl-tmp/hostnames: No such file or directory
generateSigningRequest: generating private key and signing request: /opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net/propel_host.key.csr
Generating RSA private key, 2048 bit long modulus
.....+++
.....+++
e is 65537 (0x10001)
generateSigningRequest: converting private key to SSLkey: /opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net/out/propel_host.key.rsa
writing RSA key
Signing request generated to '/opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net/propel_host.key.csr'
----- generateSigningRequest exits with 0 -----
[root@propel210bx1-ssl propel-install]#
```

Note: The private key password (= propel2014) is automatically generated by the script. (You could modified the propel-ssl-setup.sh script to display it). On page 11 of the 2.10 Administration guide it's indicated it can be changed but that's not the case. A QCCR is opened for this issue.

```
[root@propel210bx1-ssl propel-install]# ./propel-ssl-setup.sh generateSigningRequest "/C=BE/ST=Brussels DC/L=Brussels/O=Hewlett-Packard/OU=HPE Propel RnD/CN=propel210bx1-ssl.hpeswlab.net"
----- generateSigningRequest -----
Executing: ./propel-ssl-setup.sh generateSigningRequest /C=BE/ST=Brussels DC/L=Brussels/O=Hewlett-Packard/OU=HPE Propel RnD/CN=propel210bx1-ssl.hpeswlab.net
generateSigningRequest: generating private key and signing request: /opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net/propel_host.key.csr
Generating RSA private key, 2048 bit long modulus
.....+++
.....+++
e is 65537 (0x10001)
generateSigningRequest: converting private key to SSLkey: /opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net/out/propel_host.key.rsa
writing RSA key
Signing request generated to '/opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net/propel_host.key.csr'
Password for the Private key = propel2014
----- generateSigningRequest exits with 0 -----
[root@propel210bx1-ssl propel-install]#
```

The command `propel-ssl-setup.sh` creates 4 new files and 2 new directories:

- `/opt/hp/propel-install/ssl-tmp/hostnames`
- `/opt/hp/propel-install/ssl-tmp/<FQDN>/`
- `/opt/hp/propel-install/ssl-tmp/<FQDN>/private.key.pem`
- `/opt/hp/propel-install/ssl-tmp/<FQDN>/propel_host.key.csr`
- `/opt/hp/propel-install/ssl-tmp/<FQDN>/out/`
- `/opt/hp/propel-install/ssl-tmp/<FQDN>/out/propel_host.key.rsa`

```
[root@propel210bx1-ssl ssl-tmp]# ls -la
total 12
drwxr-xr-x. 3 root root 71 Feb 24 23:21 .
drwxr-xr-x. 6 jetty jetty 4096 Feb 24 17:11 ..
-rw-r--r--. 1 root root 1834 Feb 24 17:13 CA.crt
-rw-r--r--. 1 root root 30 Feb 24 23:21 hostnames
drwxr-xr-x. 3 root root 64 Feb 24 23:21 propel210bx1-ssl.hpeswlab.net
[root@propel210bx1-ssl ssl-tmp]#
```

```
[root@propel210bx1-ssl propel-install]# ls -l /opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net
total 8
drwxr-xr-x. 2 root root  32 Feb  9 11:23 out
-rw-r--r--. 1 root root 1751 Feb  9 11:23 private.key.pem
-rw-r--r--. 1 root root 1078 Feb  9 11:23 propel_host.key.csr
[root@propel210bx1-ssl propel-install]#
```

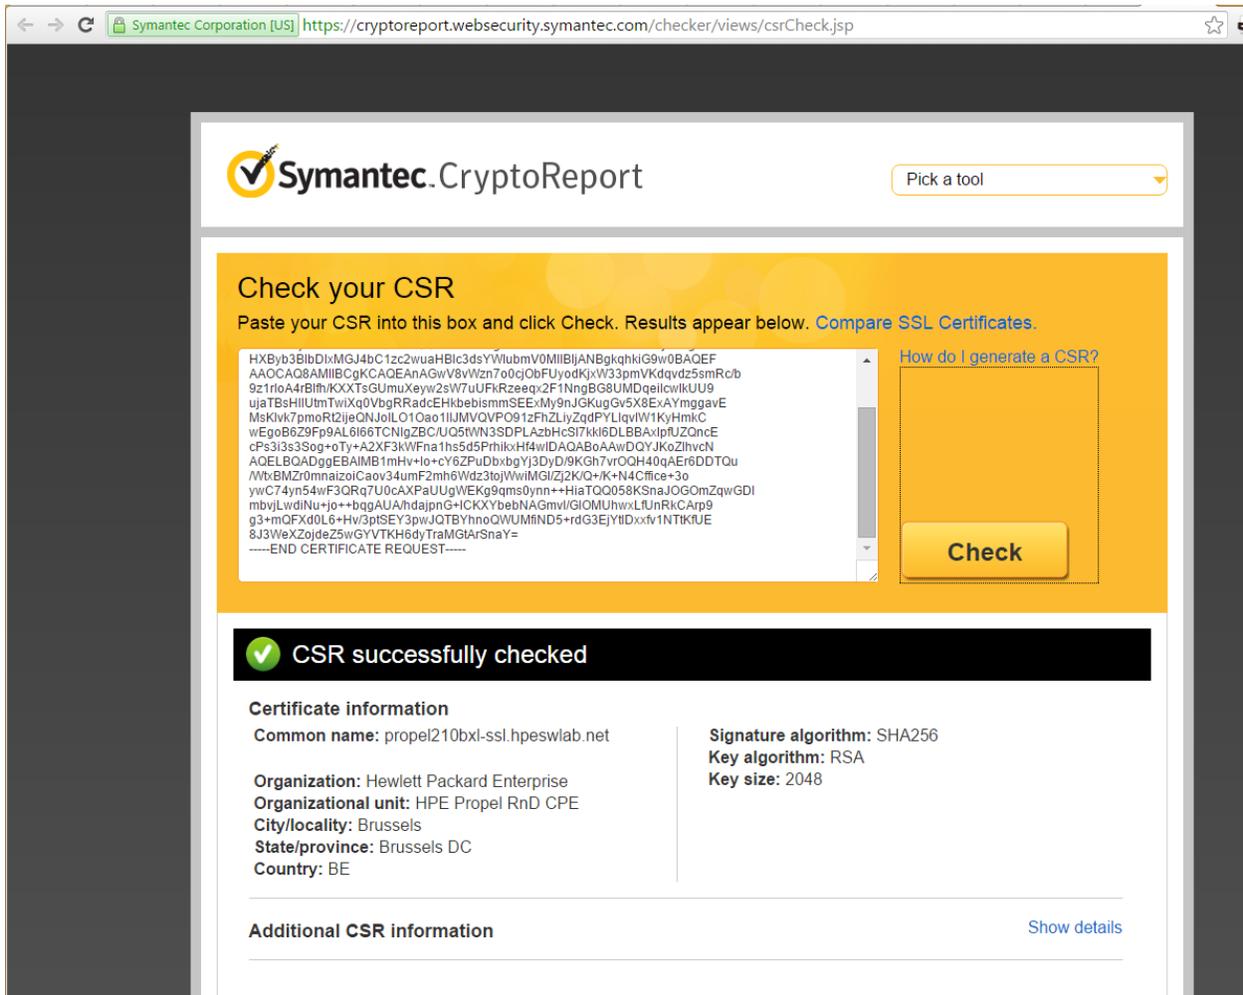

```
[root@propel210bx1-ssl propel-install]# ls -l /opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net/out
total 4
-rw-r--r--. 1 root root 1679 Feb  9 11:23 propel_host.key.rsa
[root@propel210bx1-ssl propel-install]#
```

7. You can verify the content of your CSR by pasting the text in here:  
<https://ssltools.websecurity.symantec.com/checker/views/csrCheck.jsp>

Content of the CSR:

```
drwxr-xr-x. 2 root root  32 Feb  9 11:23 out
-rw-r--r--. 1 root root 1751 Feb  9 11:23 private.key.pem
-rw-r--r--. 1 root root 1078 Feb  9 11:23 propel_host.key.csr
[root@propel210bx1-ssl propel210bx1-ssl.hpeswlab.net]# cat propel_host.key.csr

moGHDViki5zSFggl9IiSgSUh1buLjQ==
-----END CERTIFICATE REQUEST-----
[root@propel210bx1-ssl propel210bx1-ssl.hpeswlab.net]#
```

Content check:

8. Send the CSR containing the public key to your CA. This is a process specific to your company, and network administrators should know how to accomplish this. Ask for the certificate to be delivered in PEM format. If it is not, you can convert formats with the openssl command. (See an example on point 8 page 11, Propel 2.10 Administration guide)

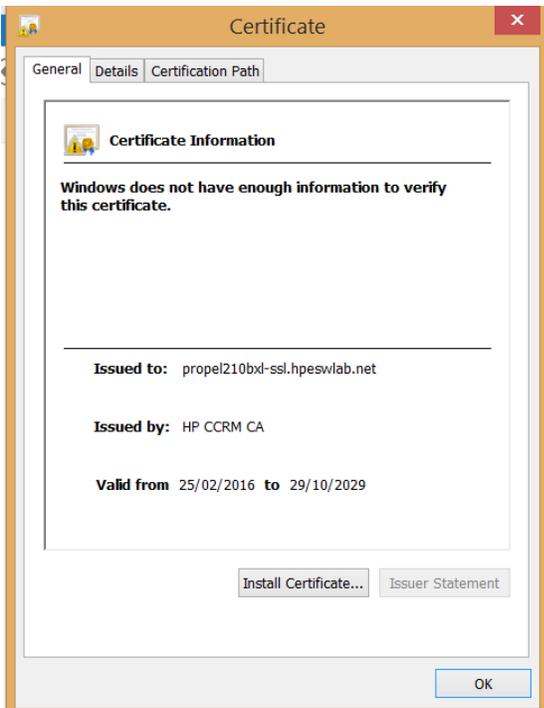

See Appendix for an example using openssl to sign the Propel server certificate with a self-signed CA.

9. Once the certificates have been received, copy the new host certificate to `/opt/hp/propel-install/ssl-tmp/<FQDN>/out/` and call it `propel_host.crt`.

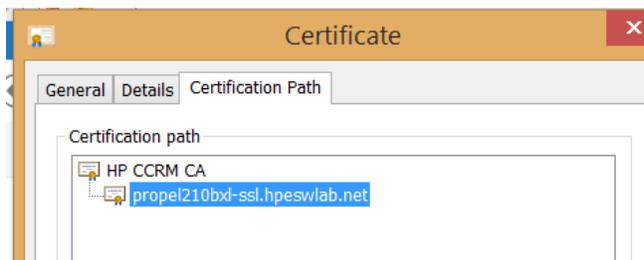

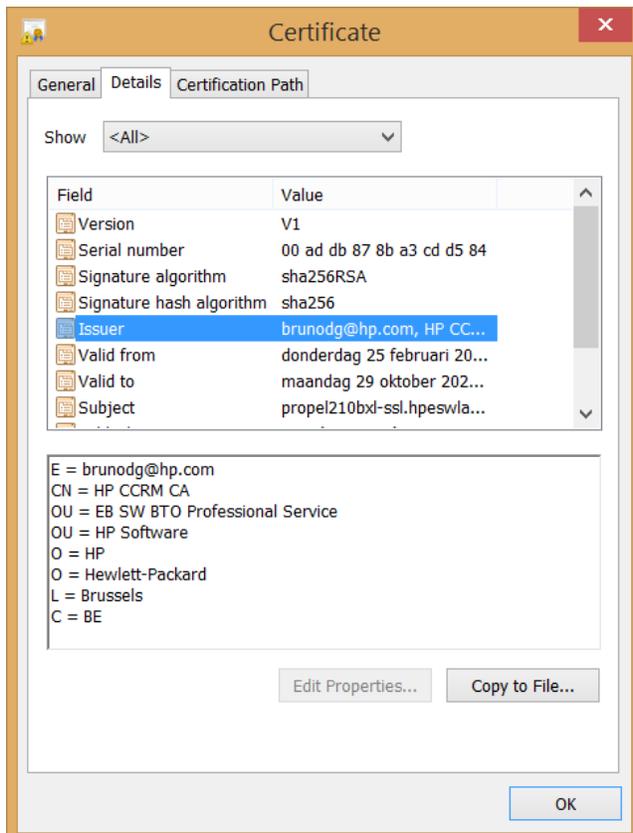

`/opt/hp/propel-install/ssl-tmp/<FQDN>/out/propel_host.crt`

```
[root@propel210bx1-ssl propel210bx1-ssl.hpeswlab.net]# cd out
[root@propel210bx1-ssl out]# ls -l
total 4
-rw-r--r--. 1 root root 1679 Feb  9 11:36 propel_host.key.rsa
[root@propel210bx1-ssl out]# vi propel_host.crt
[root@propel210bx1-ssl out]# ls -la

```

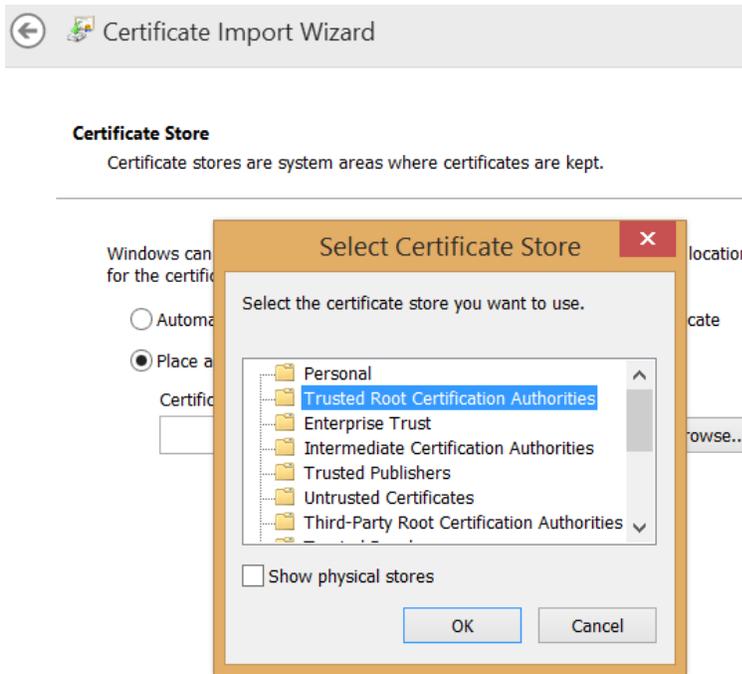

10. Display the content of the certificate on a Windows PC

It provides info which CA signed the cert:

*Note: don't forget to import your CA cert into the Trusted Root CA:*

11. Validate that the certificate and the CA match:

```
# openssl verify -verbose -CAfile /opt/hp/propel-install/ssl-tmp/CA.crt /opt/hp/propel-install/ssl-tmp/<FQDN>/out/propel_host.crt
```

You should see the following message:

```
/opt/hp/propel-install/ssl-tmp/<FQDN>/out/propel_host.crt: OK
```

Do not proceed if you see any error messages, you will need to have the CA and certificate matching first. Restart the entire procedure if necessary.

```
[root@propel210bx1-ssl ssl-tmp]# openssl verify -verbose -CAfile /opt/hp/propel-install/ssl-tmp/CA.crt /opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net/out/propel_host.crt
/opt/hp/propel-install/ssl-tmp/propel210bx1-ssl.hpeswlab.net/out/propel_host.crt: OK
[root@propel210bx1-ssl ssl-tmp]#
```

12. Create the certificate and key stores:

```
# cd /opt/hp/propel-install
# ./propel-ssl-setup.sh finish
```

```
[root@propel210b1-ssl propel-install]# ./propel-ssl-setup.sh finish
----- finish -----
Executing: ./propel-ssl-setup.sh finish
targetDir=overlay
addTrustedKey: Removing alias 'CA' from the truststore
keytool error: java.lang.Exception: Keystore file does not exist: /opt/hp/propel-install/ssl-tmp/propel.truststore

-rw-r--r--. 1 jetty jetty 1679 Dec 9 02:30 propel_host.key.rsa
-rw-r--r--. 1 jetty jetty 2500 Dec 9 02:30 propel_host.pfx

/opt/hp/propel-install/overlay/propel210b1-ssl.hpeswlab.net/security/:
total 24
drwxr-xr-x. 2 root root 4096 Feb 5 12:50 .
drwxr-xr-x. 3 root root 21 Feb 5 12:50 ..
-rw-r--r--. 1 root root 3089 Feb 9 12:46 .keystore
-rw-r--r--. 1 root root 3954 Feb 9 12:46 propel_host.chain.crt
-rw-r--r--. 1 root root 2358 Feb 9 11:41 propel_host.crt
-rw-r--r--. 1 root root 1679 Feb 9 11:36 propel_host.key.rsa
-rw-r--r--. 1 root root 3505 Feb 9 12:46 propel_host.pfx
[root@propel210b1-ssl propel-install]#
```

13. Move all the created files into their final locations:

```
# cd /opt/hp/propel-install/overlay/_ALL_HOSTS_/security
# yes|cp -p * /opt/hp/propel/security

# cd /opt/hp/propel-install/overlay/<FQDN>/security
# yes|cp -p * /opt/hp/propel/security
# yes|cp -p .keystore /opt/hp/propel/security
```

example:

Propel (2.10)

```
[root@propel210bx1-ssl propel-install]# cd /opt/hp/propel-install/overlay/_ALL_HOSTS_/security
[root@propel210bx1-ssl security]# ls -la
total 8
drwxr-xr-x. 2 jetty jetty 43 Dec 9 02:30 .

cp: overwrite '/opt/hp/propel/security/propel_host.crt'? y
cp: overwrite '/opt/hp/propel/security/propel_host.key.rsa'? y
cp: overwrite '/opt/hp/propel/security/propel_host.pfx'? y
[root@propel210bx1-ssl security]# cp -p .keystore /opt/hp/propel/security
cp: overwrite '/opt/hp/propel/security/.keystore'? y
[root@propel210bx1-ssl security]# ls -la /opt/hp/propel210bx1-ssl security
total 36
drwxr-xr-x. 2 propel root 4096 Feb 5 13:03 .
drwxr-xr-x. 33 propel root 4096 Feb 9 12:33 ..
-rw-r--r--. 1 jetty jetty 1596 Feb 9 12:46 CA.crt
-rw-r--r--. 1 root root 3089 Feb 9 12:46 .keystore
-rw-r--r--. 1 root root 3954 Feb 9 12:46 propel_host.chain.crt
-rw-r--r--. 1 root root 2358 Feb 9 11:41 propel_host.crt
-rw-r--r--. 1 root root 1679 Feb 9 11:36 propel_host.key.rsa
-rw-r--r--. 1 root root 3505 Feb 9 12:46 propel_host.pfx
-rw-r--r--. 1 jetty jetty 2932 Feb 9 12:46 propel.truststore
[root@propel210bx1-ssl security]#
```

Note: the **yes** in front of the cp commands allow to automatically sent a y when asked if you want to overwrite the existing files

## Update Propel in case you have a certificate with wildcard

To get a wildcard certificate to work (f.i. CN=\*.hpe.com) the below action has to be done:

Switch off strictSSL in all the app.json config files:

```
# cd /opt/hp/propel
# sed -i -e 's!"strictSSL": true!"strictSSL": false!' $(find . -print |grep app.json)
```

Note: HPE doesn't recommend to switch off StrictSSL and encourages to request certificates with valid Common Names.

## HP Operations Orchestration

HP Operations Orchestration (HP OO) needs to be updated. (Page 12 propel 2.10 Admin guide, point 13).

14. Backup the existing configuration:

```
# cd /opt/hp/oo/central/var/
# cp -rp security security.backup
```

Propel (2.10)

15. Manually delete the old certificates from the OO stores and install the new certificates:

```
# keytool -delete -keystore /opt/hp/oo/central/var/security/client.truststore -
alias propel_host -storepass changeit -noprompt

# keytool -importcert -keystore /opt/hp/oo/central/var/security/client.truststore -
file /opt/hp/propel/security/propel_host.crt -alias propel_host -storepass changeit
-noprompt

# keytool -delete -keystore /opt/hp/oo/central/var/security/client.truststore -
alias propeljboss_<FQDN> -storepass changeit -noprompt

# keytool -importkeystore -noprompt -srcstoretype PKCS12 -srckeystore
/opt/hp/propel/security/propel_host.pfx -srcstorepass propel2014 -destkeystore
/opt/hp/oo/central/var/security/client.truststore -deststorepass changeit

# keytool -delete -keystore /opt/hp/oo/central/var/security/key.store -alias tomcat
-storepass changeit -noprompt

# keytool -importkeystore -noprompt -srcstoretype PKCS12 -srckeystore
/opt/hp/propel/security/propel_host.pfx -srcstorepass propel2014 -destkeystore
/opt/hp/oo/central/var/security/key.store -deststorepass changeit -srcalias
propeljboss_<FQDN> -destalias tomcat

# keytool -keypasswd -new changeit -keystore
/opt/hp/oo/central/var/security/key.store -storepass changeit -alias tomcat -
keypass propel2014
```

Example:

```
[root@propel210bx1-ssl var]# keytool -delete -keystore /opt/hp/oo/central/var/security/client.truststore -alias propel_host -stor
epass changeit -noprompt
[root@propel210bx1-ssl var]# keytool -importcert -keystore /opt/hp/oo/central/var/security/client.truststore -file /opt/hp/propel
/security/propel_host.crt -alias propel_host -storepass changeit -noprompt
Certificate was added to keystore
[root@propel210bx1-ssl var]# keytool -delete -keystore /opt/hp/oo/central/var/security/client.truststore -alias propeljboss_propel
210bx1-ssl.hpeswlab.net -storepass changeit -noprompt
[root@propel210bx1-ssl var]# keytool -importkeystore -noprompt -srcstoretype PKCS12 -srckeystore /opt/hp/propel/security/propel_h
ost.pfx -srcstorepass propel2014 -destkeystore /opt/hp/oo/central/var/security/client.truststore -deststorepass changeit
Entry for alias propeljboss_propel210bx1-ssl.hpeswlab.net successfully imported.
Import command completed: 1 entries successfully imported, 0 entries failed or cancelled
[root@propel210bx1-ssl var]# keytool -delete -keystore /opt/hp/oo/central/var/security/key.store -alias tomcat -storepass changei
t -noprompt
[root@propel210bx1-ssl var]# keytool -importkeystore -noprompt -srcstoretype PKCS12 -srckeystore /opt/hp/propel/security/propel_h
ost.pfx -srcstorepass propel2014 -destkeystore /opt/hp/oo/central/var/security/key.store -deststorepass changeit -srcalias propel
jboss_propel210bx1-ssl.hpeswlab.net -destalias tomcat
[root@propel210bx1-ssl var]# keytool -keypasswd -new changeit -keystore /opt/hp/oo/central/var/security/key.store -storepass chan
geit -alias tomcat -keypass propel2014
[root@propel210bx1-ssl var]#
```

16. Restart OO  
# systemctl restart central

Propel (2.10)

## RabbitMQ

### Error

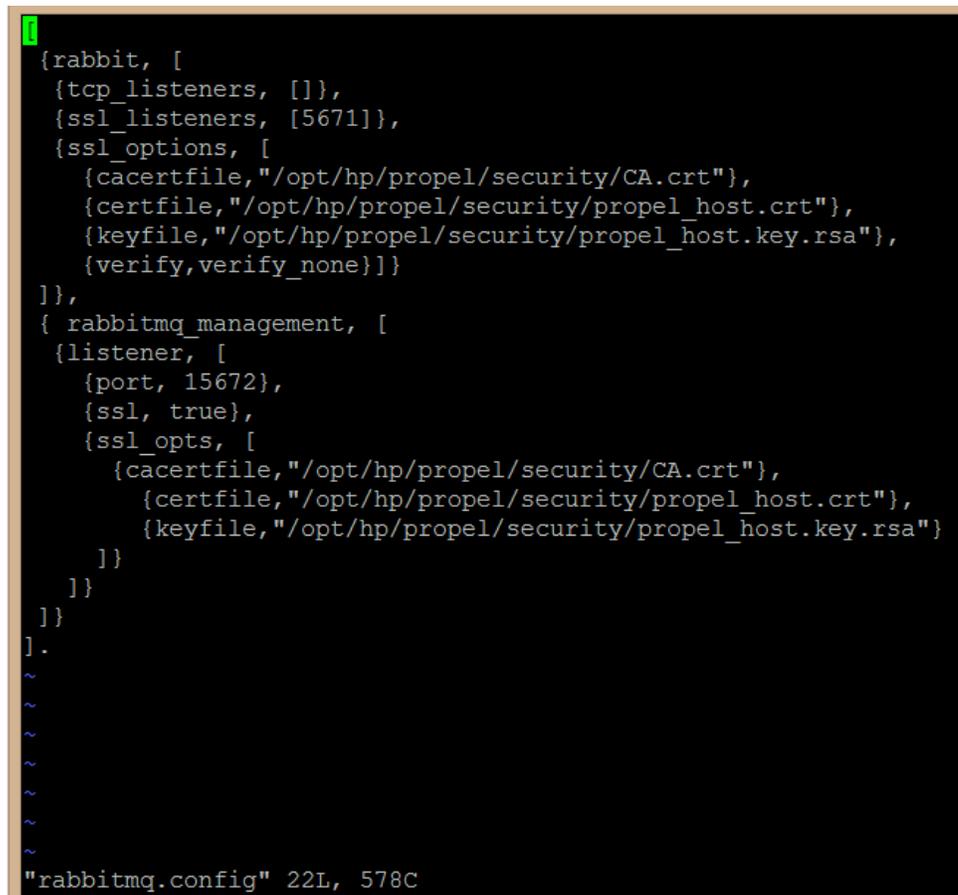

Rabbit MQ logs in `/var/log/rabbitmq` might show:

```
=ERROR REPORT==== 9-Feb-2016::14:52:07 ===  
Error on AMQP connection <0.20931.1>:  
{ssl_upgrade_error,{tls_alert,"certificate unknown"}}  
  
=ERROR REPORT==== 9-Feb-2016::14:57:01 ===  
SSL: certify: tls_connection.erl:375:Fatal error: certificate unknown
```

### Solution

Update `/etc/rabbitmq/rabbitmq.config`. The `cacertfile` should point to `CA.crt` instead of `propel_host.crt`.

```
# vi /etc/rabbitmq/rabbitmq.config
```

```
{rabbit, [  
  {tcp_listeners, []},  
  {ssl_listeners, [5671]},  
  {ssl_options, [  
    {cacertfile, "/opt/hp/propel/security/CA.crt"},  
    {certfile, "/opt/hp/propel/security/propel_host.crt"},  
    {keyfile, "/opt/hp/propel/security/propel_host.key.rsa"},  
    {verify, verify_none}}  
  ]},  
  { rabbitmq_management, [  
    {listener, [  
      {port, 15672},  
      {ssl, true},  
      {ssl_opts, [  
        {cacertfile, "/opt/hp/propel/security/CA.crt"},  
        {certfile, "/opt/hp/propel/security/propel_host.crt"},  
        {keyfile, "/opt/hp/propel/security/propel_host.key.rsa"}  
      ]}  
    ]}  
  ]}  
].  
~  
~  
~  
~  
~  
~  
"rabbitmq.config" 22L, 578C
```

After the modifications are done, restart RabbitMQ:

```
# systemctl stop rabbitmq-server  
# rm -rf /var/log/rabbitmq/*  
# systemctl start rabbitmq-server
```

Propel (2.10)

*Check if there're any errors in /var/log/rabbitmq/rabbit@<your Propel short hostname>.log*

## **Exchange again SSL certs between Propel and fulfillment systems**

*Re-Import the Propel CA and host certificate in the backend systems. Import the backend systems certificates again in the Propel truststore.*

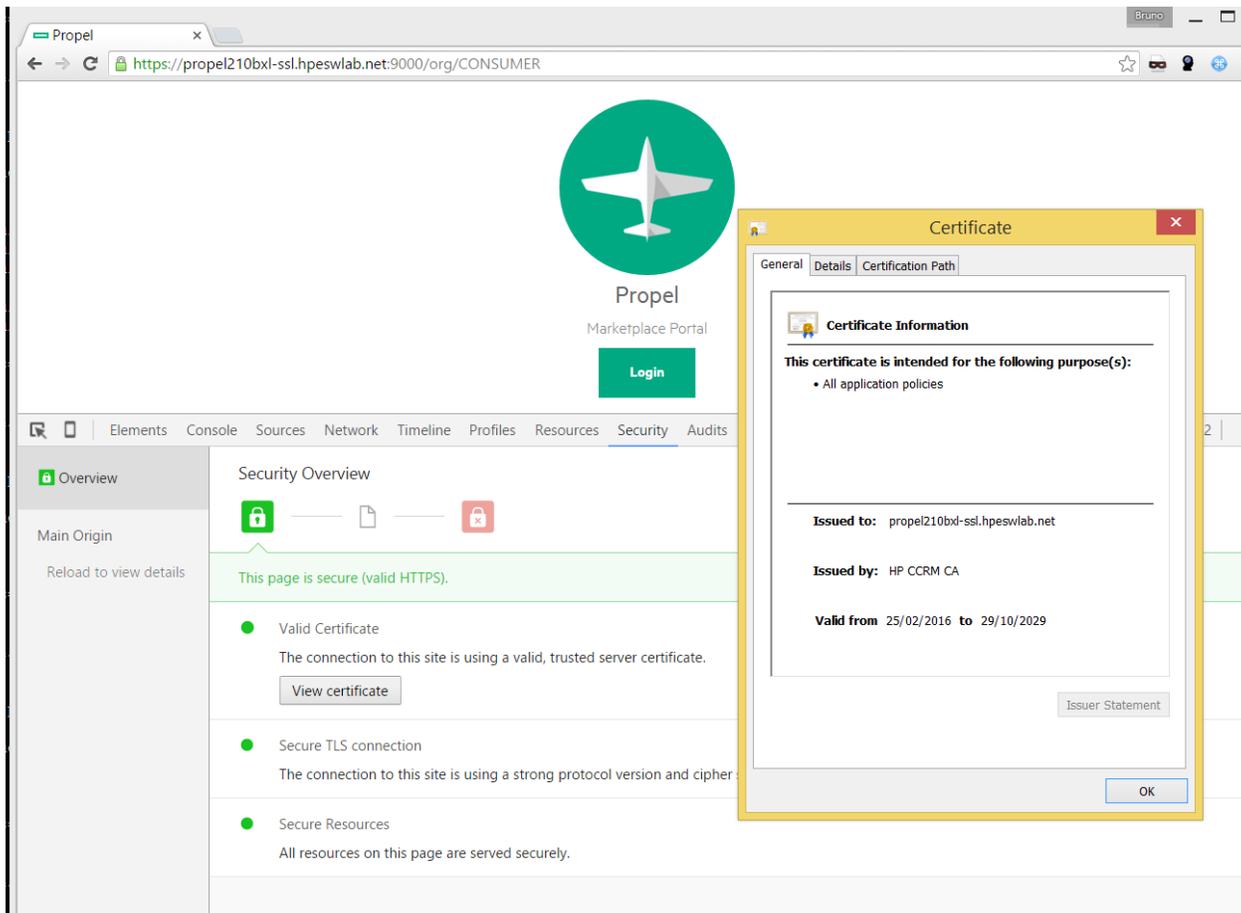

## **Restart Propel and Testing**

*Restart Propel (+ cleanup PID and log files):*

```
# propel stop
# yes | rm -f /var/run/propel/*.pid
# yes | rm -rf /var/log/propel/*/*.*
# propel start
```

*Ensure that you can login to the Propel Market Place Portal and use all functionalit in the UI as well interact with the fulfillment systems.*

*Check the new certificate:*

## Appendix

### CA creation example

Windows command to create a self signed CA, used in this example setup. Download the latest OpenSSL binaries to run these commands and modify openssl.conf to your wishes.

Commands example:

```
openssl genrsa -des3 -out cakey.pem 2048
openssl req -new -x509 -days 5000 -key cakey.pem -out cacert.pem -config .\openssl.conf
openssl x509 -in cacert.pem -text -noout
copy cacert.pem cacert.crt
```

### Sign Propel CSR with CA example

CMD-file:

```
rem
echo off

set JAVA_HOME=C:\PROGRA~2\HP\SERVIC~1.40\Server\RUN\jre
rem set JAVA_HOME=C:\PROGRA~2\Java\jre1.8.0_60

if not "%JAVA_HOME%" == "" goto gotJAVAHome
echo JAVA_HOME environment variable is not set!
exit /b 1

:gotJAVAHome

if not exist "%JAVA_HOME%\bin\keytool.exe" goto noKeyTool

rem prompt the user for the hostname of the server
echo .

set /p propelserverhost=Please enter the FQDN (Fully Qualified Domain Name) of the Propel server
host:
rem Assuming the CSR is called: propel_host-<Propel FQDN>.key.csr

echo .

echo "Now have the private CA issue a signed Propel certificate"

echo .
echo "The Propel server certificate will be written to propel_host-%propelserverhost%.cert.pem and
signed by the CA"
echo "When asked for a CA password: HPitsm_9"
echo .
set /p foobar=Press enter to continue
rem example: propel_host-propel210bxl-ssl.hpeswlab.net.key.csr
bin\openssl x509 -days 4995 -req -in propel_host-%propelserverhost%.key.csr -CA cacert.pem -CAkey
cakey.pem -CAcreateserial -out propel_host-%propelserverhost%.cert.pem
copy propel_host-%propelserverhost%.cert.pem propel_host-%propelserverhost%.crt

if not exist "%CD%\propel_host-%propelserverhost%.cert.pem" goto noCert
```

Propel (2.10)

```
goto end

:noKeyTool

echo Can't find %JAVA_HOME%\bin\keytool.exe!
exit /b 1

:noCert

echo Something went wrong with certificate creation!
exit /b 1

:end
```

## Support

Visit the Hewlett Packard Enterprise Software Support Online web site at <https://softwaresupport.hp.com/>

This web site provides contact information and details about the products, services, and support that HPE Software offers.

HPE Software online support provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the support web site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Download software patches
- Manage support contracts
- Look up HPE support contacts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

To learn more about using the customer support site, go to:

[https://softwaresupport.hp.com/documents/10180/14684/HP\\_Software\\_Customer\\_Support\\_Handbook/](https://softwaresupport.hp.com/documents/10180/14684/HP_Software_Customer_Support_Handbook/)

Most support areas require that you register and sign in as an HP Passport user. Many also require an active support contract. To find more information about support access levels, go to the following URL:

[http://h20230.www2.hp.com/new\\_access\\_levels.jsp](http://h20230.www2.hp.com/new_access_levels.jsp)

To register for an HP Passport ID, go to the following URL:

<http://h20229.www2.hp.com/passport-registration.html>
