

Hewlett Packard
Enterprise

HPE Propel

Software version 2.20.p1

Theming Customization

Documentation release date: October 2016

Software release date: September 2016

Legal Notices

Warranty

The only warranties for Hewlett Packard Enterprise products and services are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. HPE shall not be liable for technical or editorial errors or omissions contained herein. The information contained herein is subject to change without notice.

Restricted Rights Legend

Confidential computer software. Valid license from Hewlett Packard Enterprise required for possession, use or copying. Consistent with FAR 12.211 and 12.212, Commercial Computer Software, Computer Software Documentation, and Technical Data for Commercial Items are licensed to the U.S. Government under vendor's standard commercial license.

Documentation Updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition of a document, go to the following URL and sign-in or register: <https://softwaresupport.hp.com/>

Use the Search function at the top of the page to find documentation, whitepapers, and other information sources. To learn more about using the customer support site, go to: https://softwaresupport.hp.com/documents/10180/14684/HP_Software_Customer_Support_Handbook/

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your Hewlett Packard Enterprise sales representative for details.

Support

Visit the Hewlett Packard Enterprise Software Support Online web site at <https://softwaresupport.hp.com/>

This web site provides contact information and details about the products, services, and support that HPE Software offers.

HPE Software online support provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the support web site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Download software patches
- Manage support contracts
- Look up HPE support contacts
- Review information about available services
- Enter into discussions with other software customers

- Research and register for software training

To learn more about using the customer support site, go to:

https://softwaresupport.hp.com/documents/10180/14684/HP_Software_Customer_Support_Handbook/

Expectations

Theming is a part of HPE Propel Jumpstart capability, and tutorial videos are available on HPE Live Network (HPLN) to explain what Jumpstart is and how to use it.

The current theming capability as described in this document should be considered as phase 1. It is needed to get the infrastructure in place for a dedicated theming service (UI & backend) to help push changes to Jumpstart apps. In later phases we'll focus on a dedicated UI to help with theming and branding.

Currently, each theme needs to be distributed to each application's `bower_components`. This document explains how to configure a theme for the Launchpad application. The same steps can be used for other HPE Propel applications, such as Shop, Support, or Search.

Additionally, since each application relies on a different set of components and versions, each theme needs to be compiled per application.

This means that each application can use different versions of both components and the propel-foundation-theme without any issues.

Overview

HPE Propel supports theme customization via the Jumpstart framework that is used throughout its applications. More information about Jumpstart can be found on HPLN.

Mainly, style customizations are driven through theming modules. These theme modules can (and should) be generated through the Jumpstart Generator.

Once a theme module is made, it should be placed within a Jumpstart application and used to compile a theme that is available to the UI.

This document describes all manual steps required to apply a theme to the Launchpad application. In [Automated Procedure](#), instructions are provided for how you can use Ansible automation to deploy your theme to all HPE Propel UI services.

Requirements

At a minimum, you need to have HPE Propel 2.20.p1 (2.20 Patch 1) installed.

The following products must be available, installed, and configured before you can customize themes in Jumpstart applications:

(Essentially everything that is referenced in the *Jumpstart Overview* documentation)

- Install `node.js` - platform (for all Jumpstart libraries)
- Install `npm` - NodeJS library dependency manager

- Install bower - UI library dependency manager
- Install gulp - building library
- Install the Jumpstart Generator - scaffolding tool

Theme Module

A theme module is a supported UI module in Jumpstart that helps define a new theme the application can build and use.

This module has a single file that allows changes to the styling of the application.

Theme Module Structure

A theme module must consist of two files:

1. `bower.json` file
2. single `*.scss` file

The `bower.json` file should look as follows:

```
{
  "name": "my-theme",
  "version": "0.1.0",
  "keywords": [
    "jumpstart-theme-extended"           // *** helps Jumpstart apps recognize that
it's a theme module
  ],
  "dependencies": {
    "propel-foundation-theme": "^1.3.0" // *** dependencies that are being
customized by this "my-theme"
  },
  "devDependencies": {},
  "ignore": [
    "**/*.*",
    "node_modules",
    "bower_components",
    "test",
    "tests"
  ],
  "main": "**/*.scss"                   // *** identifies what scss files to use
for customization
}
```

If you used the generator, you should see a `public.api.scss` file that is similar to the listing below.

```
/* Propel Foundation Theme supported, public variables and their default values */  
  
/* body */  
/* ----- */  
$propel-body-bg-color: #ffffff !default;  
$propel-body-text-color: #666666 !default;  
$propel-primary-font-color: #333333 !default;  
  
/* header */  
/* ----- */  
$propel-header-bg-color: #ffffff !default;  
$propel-header-text-color: #666666 !default;  
  
/* footer */  
/* ----- */  
$propel-footer-bg-color: #333333 !default;  
$propel-footer-text-color: #999999 !default;  
  
/* panel */  
/* ----- */  
$propel-panel-bg-color: #ffffff !default;  
$propel-panel-text-color: #666666 !default;  
$propel-panel-secondary-bg-color: #f2f4f5 !default;  
$propel-panel-secondary-text-color: #666666 !default;  
$propel-panel-footer-bg-color: #d1d1d1 !default;  
$propel-panel-footer-text-color: #666666 !default;  
  
/* colors */  
/* ----- */  
$propel-primary: #01A982 !default;  
$propel-secondary: #999999 !default;  
$propel-success: #01A982 !default;  
$propel-warning: #FF8D6D !default;  
$propel-alert: #FF454F !default;  
$propel-info: #2AD2C9 !default;
```

Manual Procedure

Theme Module Preparation

Action user

All activities described below must be run as the `propel` user (or switch from `root` to `propel` with the following command: `# su - propel`).

Internet Access

The binaries and HPE Propel components must be downloaded from the online Internet-based HPE Propel `npm` repositories; therefore, access to the HPE Propel server via the Internet is temporarily needed.

Proxy Settings

Create or modify two environment files. Make sure to check the proxy settings because you need to connect to the Internet.

.npmrc

Add the following lines to the `~/.npmrc` file. (Create the file if it does not exist.)

```
proxy = http://web-proxy.example.com:8080
https-proxy = http://web-proxy.example.com:8080
@propel:registry = https://propelrepo.com:443/artifactory/api/npm/jumpstart
```

Note 1: This will download the NPM module `@propel/rss-msvc` from the Internet.

Note 2: This tells `npm` to go to HPE Propel's private `npm` repository for all `npm` modules name spaced with `@propel.propelrepo.com = [52.36.185.154]`

Note 3: Modify the `proxy` and `https-proxy` parameters to use your company's proxy server.

.bowerrc

Add the following lines to the `~/.bowerrc` file. (Create the file if it does not exist.)

```
{
"resolvers": [
"bower-art-resolver"
],
"registry": "https://propelrepo.com:443/artifactory/api/bower/jumpstart-
bower-virt",
"proxy": "http://web-proxy.eu.hpecorp.net:8080/",
"https-proxy": "http://web-proxy.eu.hpecorp.net:8080/"
}
```

Note: Modify the `proxy` and `https-proxy` parameters to use your company's proxy server.

Exit your session and log in again as the `propel` user to make sure the two environment files are loaded.

Prepare installation directory

Make a directory for global installations

```
# mkdir ~/.npm-global
```

Configure npm to use the new directory path

```
# npm config set prefix '~/.npm-global'
```

Update \$PATH

Edit the `~/.bashrc` file, add the following line.

```
export PATH=~/.npm-global/bin:$PATH
```

Make the changes on the `.bashrc` file effective. Or, you can log in again as the `propel` user.

```
# source ~/.bashrc
```

Get the Latest npm, yo, bower and gulp Components

```
# npm install -g npm
# npm install -g yo
# npm install -g bower bower-art-resolver
```

```
# npm install -g gulp
```

Install Propel Jumpstart Yeoman Generator

This will download the latest generator from the HPE Propel `npm` repository. This update can take a while to complete.

```
# npm install -g @propel/generator-jumpstart
```

Theme Module Generator

An initial theme module can easily be scaffolded through the Jumpstart Generator.

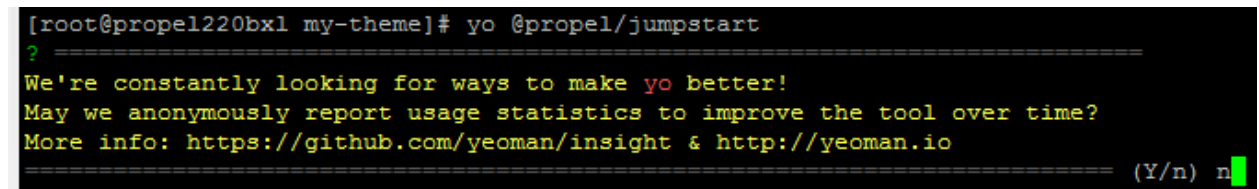

1. On the HPE Propel server, log in as the `propel` user (or switch from `root` to `propel` with the following command: `# su - propel`).
2. Create a directory within HPE Propel's home directory (`/home/propel`) for your theme and navigate to it:

```
# cd  
# mkdir my-theme  
# cd my-theme
```

3. Run the yeoman Jumpstart Generator

```
# yo @propel/jumpstart
```

Note: Reply “no” to the usage statistics:

```
[root@propel220bx1 my-theme]# yo @propel/jumpstart  
?  
=====
```

We're constantly looking for ways to make yo better!
May we anonymously report usage statistics to improve the tool over time?
More info: <https://github.com/yeoman/insight> & <http://yeoman.io>

```
===== (Y/n) n
```

4. You should see a command-line Interface for creating the Jumpstart servers, modules, and servers. (See below for a screenshot.)

Edit the `my-theme/public.api.scss` file and you can change the colors of the parameters that have been exposed. For example, you can change the background color and the text color. See the examples in [Color Mapping in the HPE Propel Launchpad Interface](#).

Build the New HPE Propel Theme

Copy the `my-theme` module into your target HPE Propel Jumpstart application. This example describes how theming is applied to the Launchpad application. For example, you can copy it into `/opt/hp/propel/launchpad/bower_components` if you want to apply this theme to the Launchpad application.

Note: You have to do this for all HPE Propel Jumpstart applications where you want to apply the theme.

```
# cp -rf /home/propel/my-theme /opt/hp/propel/launchpad/bower_components
```

The following instructions are for repackaging the web content for the HPE Propel Jumpstart application (for example, Launchpad).

```
# cd /opt/hp/propel/launchpad
# npm install @propel/gulp-jumpstart-web-packager
# npm install gulp
# mv dist dist.bak
```

Note: For details about repackaging the web content using the `@propel/gulp-jumpstart-web-packager`, please refer to the HPE Propel Jumpstart tutorial on HPLN.

Backup the existing `gulpfile.js` file:

```
# cd /opt/hp/propel/launchpad
# mv gulpfile.js gulpfile.js.bak
```

Create a new `gulpfile.js` under `/opt/hp/propel/launchpad` and add the following content:

```
'use strict';
require('@propel/gulp-jumpstart-web-packager')();
```

```
'use strict';
require('@propel/gulp-jumpstart-web-packager')();
```

Now link the theme:

```
# cd /home/propel/my-theme
# bower link
```

HPE Propel Theming Customization

```
[propel@propel220bx1 my-theme]$ bower link
bower          invalid-meta The "main" field cannot contain globs (example: "*.js")
bower          link /home/propel/.local/share/bower/links/my-theme > /home/propel/my-theme
```

```
# cd /opt/hp/propel/launchpad
```

```
# bower link my-theme
```

```
[propel@propel220bx1 launchpad]$ bower link my-theme

Restart Launchpad

```
# sudo systemctl restart launchpad
```

Apply the New HPE Propel Theme

Use the HPE Propel Identity application to associate the new theme to an organization. Under the **Customization** tab (for a selected organization), set the `themeName` attribute to the new theme module name. In this example, it is set to “my-theme.”

The screenshot shows the 'Customization' tab for the organization 'Brussels HPE Propel Team (2.20 -> 2.20P1HF2)'. The 'themeName' attribute is highlighted in yellow and set to 'my-theme'. Other attributes include disclaimerText, enableOrderRecipient, featuredCategory, languages, portalEndDatePeriod, portalEnforceEndDate, portalFooterMsg, portalLegalNoticeUrl, portalShowConfirmDialog, portalShowLegalNotice, portalShowTermsOfUse, portalTermsOfUseUrl, portalTitle, portalWelcomeMsg, securityLevel, and widget.Clock.

widget.Clock	{ "type": "MASHUP", ... }	✎ ✕

themeName * my-theme

Note: If you need to modify something in the SCSS file (other color scheme), just modify the SCSS file (in `/home/propel/my-theme`) and run `gulp dist` again from the `Launchpad` directory and restart the corresponding service.

Automated Procedure

To simplify the use of theming, a large amount of the steps described in the manual procedure above have been automated in Ansible scripts.

The scripts can be used to deploy theming on both a single node HPE Propel and a distributed HPE Propel (DP) environment.

For DP environments all actions must be performed from the load balancer (LB) server unless stated otherwise. The assumption is made that all necessary configuration was done to allow SSH connections with the `propel` user between the LB and HPE Propel Cluster Nodes in the HPE Propel Cluster as described in the *Distributed HPE Propel Deployment Guide*.

Preparation

Extract Scripts

On the HPE Propel server, log in as the `propel` user (or switch from `root` to `propel` with the following command: `# su - propel`).

Copy `theme.zip` to the `/opt/hp/propel/contrib` folder. (Use an SCP program to move the zip container to your HPE Propel server.)

Extract the `theme.zip` archive:

```
# cd /opt/hp/propel/contrib
# unzip theme.zip
# cd /opt/hp/propel/contrib/theme
```

Verify hosts File

Verify the content of the `/opt/hp/propel/contrib/theme/hosts.default` file. For HPE Propel single node environments the file should contain “localhost”; for DP environments. This file should contain the FQDN of all HPE Propel Cluster Nodes.

Example Single Node Propel:

```
[theme_hosts]
localhost
```

Example DP:

```
[theme_hosts]
propel-cluster-node1.example.net
```

```
propel-cluster-node2.example.net
```

Set Proxy

Modify the `proxy` value in `/opt/hp/propel/contrib/theme/group_vars/theme_hosts` and apply your company's proxy server.

Running the scripts

Execution of the First Script

The `1_theming_install.yml` script performs the following actions:

- Install all needed components.
- Make a backup named `dist.bac` of all the `dist` folders located in the application directories.
- Create a `.bowerrc` file.
- Create a `.npmrc` file.
- Create a `/opt/hp/propel/custom-theme` directory in which the new theme can be generated.

The script execution time is approximately 50 minutes.

1. Make sure you are logged in as the `propel` user.
2. Go to the location where the scripts were extracted:

```
# cd /opt/hp/propel/contrib/theme
```

3. Start the script with the appropriate command. (At the beginning of the script, it prompts for the `propel` user's password.)

Single Node:

```
# ansible-playbook -c local 1_theming_install.yml -u propel
--ask-become-pass
```

DP:

```
# ansible-playbook 1_theming_install.yml -u propel -c paramiko
--ask-become-pass
```

Generation of the New Theme Module

1. Make sure you are logged in as the `propel` user.
For DP these steps need to be executed with the `propel` user on each of the Propel Cluster

Nodes

2. Go to the custom-theme directory that was created by the `1_theming_install.yml` script in the previous step:

```
# cd /opt/hp/propel/custom-theme
```

3. Follow the instructions described in [Theme Module Generator](#) starting from point 2.

Edit the `custom-theme/public.api.scss` file and you can change the colors of the parameters that have been exposed. For example, you can change the background color and the text color. See the examples in [Color Mapping in the HPE Propel Launchpad Interface](#).

Execution of the Second Script

The `2_theming_install_part2.yml` script performs following actions:

- Stop HPE Propel
- Copy the custom-theme folder to the application folders
- Generate bower links
- Rebuild web packages
- Start HPE Propel

1. Make sure you are logged in as the `propel` user.

For DP these steps need to be executed with the `propel` user on the load balancer

2. Go to the location where the scripts were extracted:

```
# cd /opt/hp/propel/contrib/theme
```

3. Start the script with the appropriate command. (At the beginning, the script prompts for the `propel` user's password.)

Single Node:

```
# ansible-playbook -c local 2_theming_install_part2.yml -u propel  
--ask-become-pass
```

DP:

```
# ansible-playbook 2_theming_install_part2.yml -u propel -c paramiko  
--ask-become-pass
```

4. Follow the instructions described in [Apply the New HPE Propel Theme](#) to associate the new theme to an organization.

Subsequent Theme Changes

In case you need to adapt some of the colors at a later time, simply modify the `/opt/hp/propel/custom-theme/public.api.scss` file and execute the `3_theming_repackaging.yml` script, per the steps below.

1. Make sure you are logged in as the `propel` user
2. Go to the location where the scripts were extracted:

```
# cd /opt/hp/propel/contrib/theme
```

3. Start the script with the appropriate command. (At the beginning, the script prompts for the `propel` user's password)

Single Node:

```
# ansible-playbook -c local 3_theming_repackaging.yml -u propel  
--ask-become-pass
```

DP:

```
# ansible-playbook 3_theming_repackaging.yml -u propel -c paramiko  
--ask-become-pass
```

Color Mapping in the HPE Propel Launchpad Interface

The following example shows the mapping of color codes that are defined in the CSS in the Launchpad interface. The example is based on the `public.api.scss` definition below:

```
/* Propel Foundation Theme supported, public variables and their default
values */

/* body */
/* ----- */
$propel-body-bg-color: #b4bee4 !default;
$propel-body-text-color: #ffcc33 !default;
$propel-primary-font-color: #fbf94d !default;

/* header */
/* ----- */
$propel-header-bg-color: #b4bee4 !default;
$propel-header-text-color: #7cbc57 !default;

/* footer */
/* ----- */
$propel-footer-bg-color: #3efac3 !default;
$propel-footer-text-color: #379d7f !default;

/* panel */
/* ----- */
$propel-panel-bg-color: #2ebbf9 !default;
$propel-panel-text-color: #217ba3 !default;
$propel-panel-secondary-bg-color: #ff6033 !default;
$propel-panel-secondary-text-color: #5e6688 !default;
$propel-panel-footer-bg-color: #4f3af6 !default;
$propel-panel-footer-text-color: #c980f2 !default;

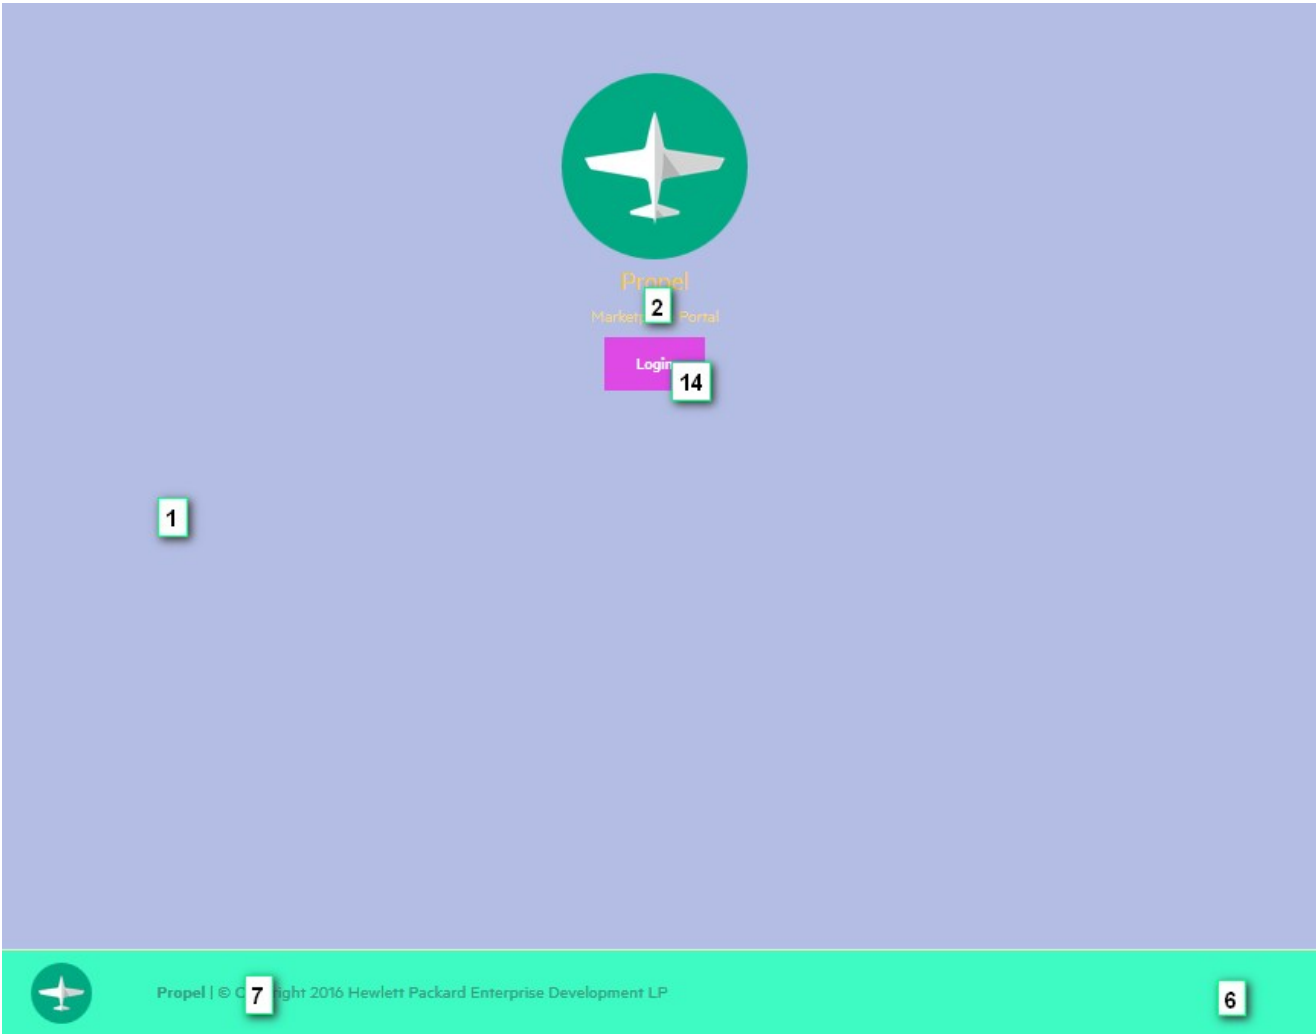

/* colors */
/* ----- */
$propel-primary: #df4ae7 !default;
$propel-secondary: #d98880 !default;
$propel-success: #a6acaf !default;
$propel-warning: #996633 !default;
$propel-alert: #ff3366 !default;
$propel-info: #ff0000 !default;
```

Color correspondence:

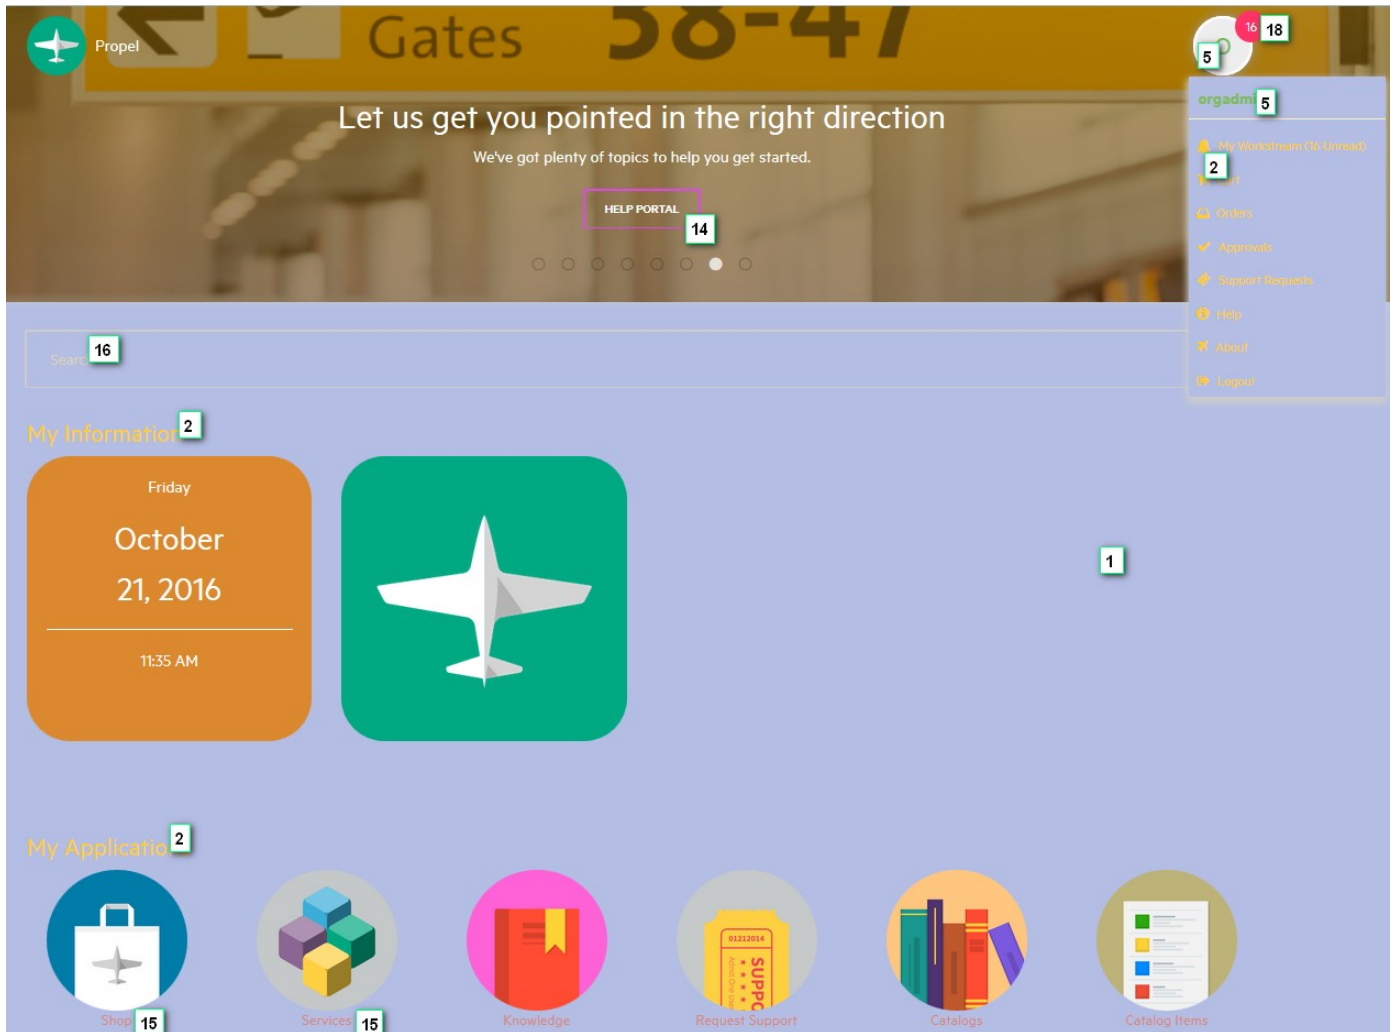

/ Propel Foundation Theme supported, public variables and their default values */*

```
/* body */  
/* ----- */  
$propel-body-bg-color: #b4bee4 !default;  
 1  
$propel-body-text-color: #ffcc33 !default;  
 2  
$propel-primary-font-color: #fbf94d !default;  
 3  
/* header */  
/* ----- */  
$propel-header-bg-color: #cdfb4D !default;  
 4  
$propel-header-text-color: #7cbc57 !default;  
 5  
/* footer */  
/* ----- */  
$propel-footer-bg-color: #3efac3 !default;  
 6  
$propel-footer-text-color: #379d7f !default;  
 7  
  
/* panel */  
/* ----- */  
$propel-panel-bg-color: #2ebbf6 !default;  
 8  
$propel-panel-text-color: #217ba3 !default;  
 9  
$propel-panel-secondary-bg-color: #ff6033 !default;  
 10  
$propel-panel-secondary-text-color: #5e6688 !default;  
 11  
$propel-panel-footer-bg-color: #4f3af6 !default;  
 12  
$propel-panel-footer-text-color: #c980f2 !default;  
 13  
  
/* colors */  
/* ----- */  
$propel-primary: #df4ae7 !default;  
 14  
$propel-secondary: #d98880 !default;  
 15  
$propel-success: #a6acaf !default;  
 16  
$propel-warning: #996633 !default;  
 17  
$propel-alert: #ff3366 !default;  
 18  
$propel-info: #ff0000 !default;  
 19
```
