# Overview

This guide provides Jconsole, JavaMelody, and Jboss configuration information for monitoring the CSA 4.6 server with Jboss 8.2.0.Final for application-server administrators.

Tool	Monitored Processes	Prerequisites
<b>Jconsole</b> (Jconsole provides the monitoring and management user interface for Jboss, and can be installed locally or remotely.)	Heap and memory pools, threads, HTTP sessions (CSA and IdM), datasources	Install JDK 1.8 or OpenJRE 1.8.0_60 on the machine that runs the Jconsole (locally or remotely). Set the <code>JAVA_HOME</code> environment variable, for example: <code>JAVA_HOME=C:\Program Files\Java\jdk1.8.0_66</code>
<b>JavaMelody 1.57.0</b>	Heap pools, CPU, threads, HTTP sessions (only CSA), HTTP requests, SQL queries	Enable in the CSA file web.xml. See <a href="#">Configurations</a> .
<b>Jboss</b>	Heap and memory pools, memory threads, HTTP sessions (CSA and IdM), datasources	Install <code>curl</code> utility to send HTTP POST requests in text form. Responses to the POST can be stored in a file. <b>Note:</b> No JDK installation is required. See <a href="#">Use the curl tool to manage Jboss data</a> .

**Note:** `JBOSS_HOME\bin\client\README-CLI-JCONSOLE.txt` provides instructions how to run both the Jconsole and the Jboss command-line management tools. `JBOSS_HOME` is the Jboss installation directory, for example: `C:\Program Files\HPE\CSA_HOME\jboss-as`.

## Configurations

This section describes the file configurations and command-line options to set up the monitoring tools.

**Note:** Restart Jboss after you complete the configurations in this section.

## Add management user

To add the management user, run `JBOSS_HOME\bin\add-user.bat` or `JBOSS_HOME\bin\add-user.sh` from the command line.

When prompted, enter the information in the following table. Press **Enter** to accept the default for all the other prompts.

Prompt	Information to enter
Type of user	a) Management User
Username and password	Chose any username and password. Note the password requirements that are displayed on the screen.  You will need to use this same information to access the Management Console, and to establish a remote connection between Jconsole and the CSA installation machine (see the <i>CSA installation machine</i> row in the <a href="#">Configure files</a> table).
User groups	Press <b>Enter</b> to accept the defaults.
AS process connection	No

The following shows a typical script output:

```
C:\Program Files\HPE\CSA\jboss-as\bin>add-user.bat
What type of user do you wish to add?
a) Management User (mgmt-users.properties)
b) Application User (application-users.properties)
(a):
Enter the details of the new user to add.
Using realm 'ManagementRealm' as discovered from the existing property files.
Username : john
Password recommendations are listed below. To modify these restrictions edit the add-user.properties configuration fi
- The password should not be one of the following restricted values (root, admin, administrator)
- The password should contain at least 8 characters, 1 alphabetic character(s), 1 digit(s), 1 non-alphanumeric symbo
- The password should be different from the username
Password :
JBAS015269: Password must have at least 8 characters!
Are you sure you want to use the password entered yes/no? yes
Re-enter Password :
What groups do you want this user to belong to? (Please enter a comma separated list, or leave blank for none)[ ]:
About to add user 'john' for realm 'ManagementRealm'
Is this correct yes/no? yes
Added user 'john' to file 'C:\Program Files\HPE\CSA\jboss-as\standalone\configuration\mgmt-users.properties'
Added user 'john' to file 'C:\Program Files\HPE\CSA\jboss-as\domain\configuration\mgmt-users.properties'
Added user 'john' with groups to file 'C:\Program Files\HPE\CSA\jboss-as\standalone\configuration\mgmt-groups.proper
Added user 'john' with groups to file 'C:\Program Files\HPE\CSA\jboss-as\domain\configuration\mgmt-groups.properties'
Is this new user going to be used for one AS process to connect to another AS process?
e.g. for a slave host controller connecting to the master or for a Remoting connection for server to server EJB calls
yes/no? no
Press any key to continue . . .
```

## Configure associated files

Make the following configurations:

In this file	Do this
JBOSS_HOME \standalone\configuration\ standalone.xml	Set the Jboss management IP address to the <code>jboss.bind.address.management</code> JVM option or, if the JVM option is not provided, to the default value (127.0.0.1):  <pre>&lt;interface name="management"&gt;   &lt;inet-address value="\${jboss.bind.address.management: 127.0.0.1}"/&gt; &lt;/interface&gt;</pre>
JBOSS_HOME \bin\standalone.conf (.bat)	For remote access, set the <code>jboss.bind.address.management</code> JVM option to the <code>CSA_PUBLIC_IP</code> address.  Replace this:  <pre>JAVA_OPTS="\$JAVA_OPTS - Djboss.bind.address.management=127.0.0.1"</pre> With this:  <pre>set JAVA_OPTS=%JAVA_OPTS% - Djboss.bind.address.management=CSA_PUBLIC_IP</pre>
JBOSS_HOME \standalone\deployments\csa.war\ WEB-INF\web.xml	Set the value of the <code>param-value</code> variable to <code>false</code> : Replace this:  <pre>&lt;!-- BEGIN - JavaMelody monitoring configuration --&gt; ... &lt;init-param&gt;   &lt;param-name&gt;disabled&lt;/param-name&gt;   &lt;param-value&gt;true&lt;/param-value&gt; &lt;/init-param&gt;</pre> With this:  <pre>&lt;!-- BEGIN - JavaMelody monitoring configuration --&gt; ... &lt;init-param&gt;   &lt;param-name&gt;disabled&lt;/param-name&gt;   &lt;param-value&gt;false&lt;/param-value&gt; &lt;/init-param&gt;</pre>

In this file	Do this
JBOSS_HOME standalone\deployments\csa.war\ WEB-INF\web.xml	<b>Optional:</b> Disable CSA-database monitoring to minimize possible JavaMelody overhead:  Delete the init-param parameter: <pre>&lt;init-param&gt;   &lt;param-name&gt;datasources&lt;/param-name&gt;   &lt;param-value&gt;java:jboss/datasources/csaDS&lt;/param-value&gt; &lt;/init-param&gt;</pre>
JBOSS_HOME standalone\deployments\csa.war\ WEB-INF\applicationContext- security.xml	<b>Optional:</b> Enable JavaMelody report viewing from any machine, not just the CSA installation machine (default view is from: 127.0.0.1)  Find the intercept-url pattern line: <pre>&lt;intercept-url pattern="/monitoring/**" ..</pre> Change the value to isAuthenticated(): <pre>&lt;intercept-url pattern="/monitoring/**" access="isAuthenticated()" /&gt;</pre>
CSA installation machine	<b>Optional:</b> Establish remote connection between Jconsole and CSA installation machine: <ol style="list-style-type: none"> <li>1. Copy JBOSS_HOME\bin\jconsole.bat to MONITORING_HOME\bin directory.</li> <li>2. Copy JBOSS_HOME\bin\client\jboss-cli-client.jar to MONITORING_HOME\bin\client directory.</li> <li>3. Run MONITORING_HOME\bin\jconsole.bat.</li> <li>4. Remote connect to service:jmx:http-remoting-jmx://&lt;CSA_IP or CSA_HOSTNAME&gt;:9990 using the same username and password you used when you added the user (see <a href="#">Add management user</a>).</li> </ol> <b>Note:</b> MONITORING_HOME is any directory on the monitoring tool installation machine.

## Configure garbage-collection log

Garbage collection logs (GC logs) in Java-based applications provide detailed information about memory pools. For example, intervals between two major GCs of under 10 minutes can result in performance degradation. If the GC log option is enabled, a file (such as gcoutput\_20160112-120349.log) is created in the JBOSS\_HOME\bin directory each time Jboss starts.

**Note:** Use the date.exe utility, which is a Windows Unix utility, to add a date and timestamp to the GC log name so existing log data is not overwritten when Jboss restarts. Log file names *must* be unique.

### Windows:

Add the following to the JBOSS\_HOME\bin\standalone.conf.bat file:

```
set UNIX_UTIL=C:\UnxUtils

for /f "usebackq" %%a in (`%UNIX_UTIL%\date.exe +%Y%m%d-%H%M%S`) do set
GC_LOG=gcoutput_%%a.log

set JAVA_OPTS=%JAVA_OPTS% -verbose:gc -Xloggc:%GC_LOG% -XX:+PrintGCDetails -XX:+PrintGCTimeStamps -
XX:+PrintHeapAtGC
```

### Linux:

Add the following to the JBOSS\_HOME\bin\standalone.conf file:

```
TIMESTAMP=`date '+%Y%m%d_%H%M%S'`
```

```
WORK_DIR=`dirname $0`  
GC_LOG=$WORK_DIR/gcoutput_${TIMESTAMP}.log  
JAVA_OPTS="$JAVA_OPTS -verbose:gc -Xloggc:$GC_LOG -XX:+PrintGCDetails -XX:+PrintGCTimeStamps -  
XX:+PrintHeapAtGC"
```

## Use the curl tool to manage Jboss data

If you do not have access to a JRE, or you must use a command line, or you do not have the option of installing a JDK and you use the Jconsole UI instead, you can gather memory, thread information, and other Jboss data by sending HTTP POST requests with the `curl` tool. HTTP POST calls return JSON textual format. Download curl (1.56MB) for win 64 at: <http://curl.haxx.se/latest.cgi?curl=win64-ssl-sspi>.

**Note:** For information about the Jboss management API, see:  
[https://docs.jboss.org/author/display/AS71/The+HTTP+management+API?\\_sscc=t](https://docs.jboss.org/author/display/AS71/The+HTTP+management+API?_sscc=t)

## Run the curl tool

To run the `curl` tool, enter the following at the command line:

```
curl --digest -u %MGMT_USER%:%MGMT_PASSWORD% -H "Content-Type: application/json" -X POST  
http://%CSA_HOST%:9990/manSampleageement -d %DATA% -o %OUTPUT_FILE
```

Where:

- `%MGMT_USER%:%MGMT_PASSWORD%` correspond to the username and password you entered in [Add management user](#).
- `%DATA%` is the requested data (in JSON).

See [Call samples](#).

## Sample curl data

To access a script that periodically retrieves data, contact the PCoE team.

Use the following command samples and call data to create calls for `curl` data.

**Note:** You must use escape characters to 'escape' the quotation marks around field names on Windows. For example:  
`"recursive\"`. See the sample commands below.

### Windows command

```
curl --digest -u <mgmt._user>:<mgmt._password> -H "Content-Type: application/json" -X POST  
http://mpaph0231.hpeswlab.net:9990/management -d {"operation\":\"read-resource\", \"include-  
runtime\":\"true\", \"recursive\":\"true\", \"address\": [\"core-service\", \"platform-mbean\", \"type\", \"memory\"]}
```

`<mgmt._user>:<mgmt._password>` are the username and password you created in [Add management user](#).

### Linux command

```
curl --digest -u <mgmt._user>:<mgmt._password> -H "Content-Type: application/json" -X POST  
http://CSA_HOST:9990/management -d '{"operation":"read-resource", "include-  
runtime":"true", "recursive":"true", "address": ["core-service", "platform-mbean", "type", "memory"]}'
```

### Windows and Linux output

```
{ "outcome" : "success", "result" : { "heap-memory-usage" : { "init" : 4253024256, "used" : 2470366512, "committed"  
: 4236247040, "max" : 4236247040 }, "non-heap-memory-usage" : { "init" : 2555904, "used" : 250615000, "committed"  
: 273686528, "max" : -1 }, "object-name" : "java.lang:type=Memory", "object-pending-finalization-count" : 0,  
"verbose" : false }}
```

## Call data

Below is sample data (%DATA%, as described in [Run the curl tool](#)) for different HTTP POST requests.

**Memory:** `{"operation":"read-resource", "include-runtime":"true", "recursive":"true", "address":["core-  
service", "platform-mbean", "type", "memory"]}`

**Memory pools:** {"operation": "read-resource", "include-runtime": "true", "recursive": "true", "address": ["core-service", "platform-mbean", "type", "memory-pool"]}

**Data source (MSSQL):** {"operation": "read-resource", "include-runtime": "true", "recursive": "true", "address": ["subsystem", "datasources", "data-source", "mssqlDS", "statistics", "pool"]}

**Threads:** {"operation": "read-resource", "include-runtime": "true", "recursive": "true", "address": ["core-service", "platform-mbean", "type", "threading"]}

**Sessions (CSA):** {"operation": "read-resource", "include-runtime": "true", "recursive": "true", "address": ["deployment", "csa.war", "subsystem", "undertow"]}

**Classes:** {"operation": "read-resource", "include-runtime": "true", "recursive": "true", "address": ["core-service", "platform-mbean", "type", "class-loading"]}

## Other resources

To access an HTML user interface for Jboss management, see: [http://CSA\\_HOST:9990/console](http://CSA_HOST:9990/console).

To access the native user interface:

1. Access `JBOSS_HOME\bin\client\README-CLI-JCONSOLE.txt`. This script provides instructions on how to run the Jconsole and the Jboss CLI management tool.
2. Once the CLI GUI is launched:
  - a. Enter the user name and password you entered when you ran the `add-user. (bat|sh)` script (see [Add management user](#)).
  - b. Enter the following command:

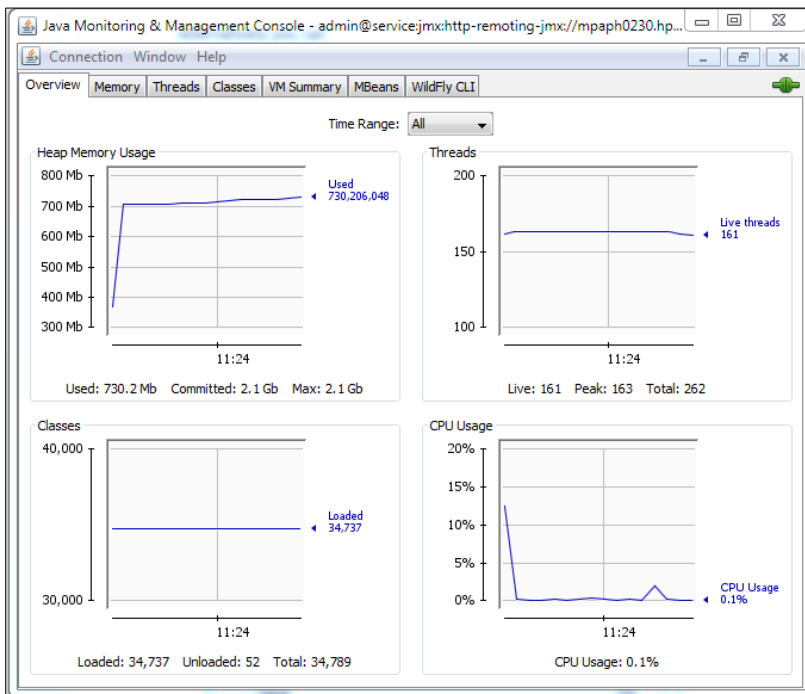

```
java -jar <PATH TO jboss-cli-client.jar> --gui --controller=CSA_HOST:9990 --user=%MGMT_USER% --password=%MGMT_PASSWORD%
```

## Monitoring Screens

This section provides examples of how your data might be displayed in the user interface.

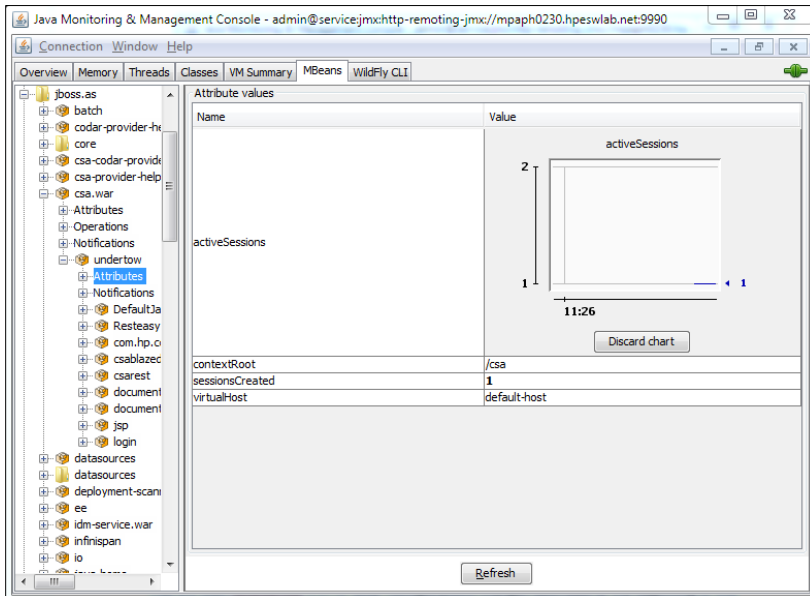

## Java monitoring and management console

This console shows graphs for various metrics, including threads, heap-memory use, and CPU use.

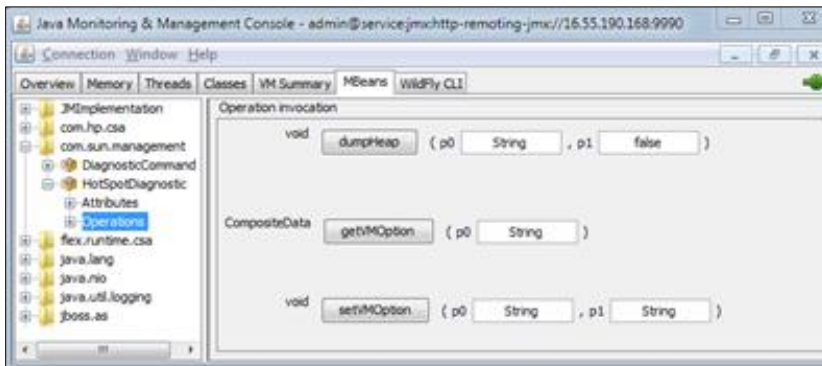

# Active CSA sessions for Mbean

This screen shows Java metrics.

## Jconsole heap dump

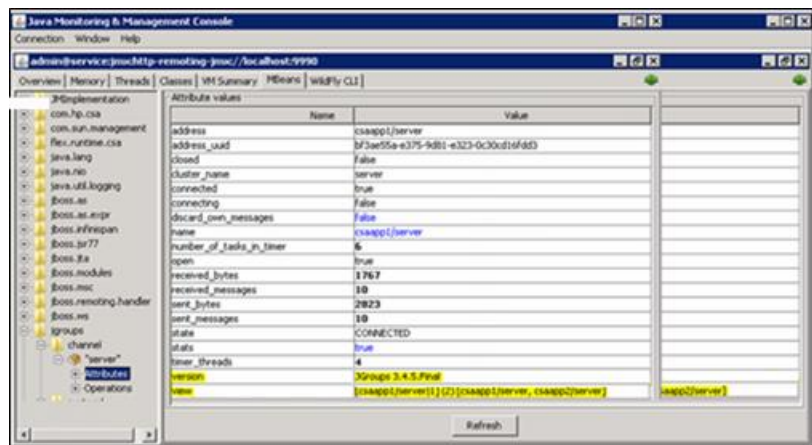

Change `p0` to the heap dump name, and `p1` to `false` (default is `true`) to avoid triggering a major GC before the heap dump, or to debug heap issues.

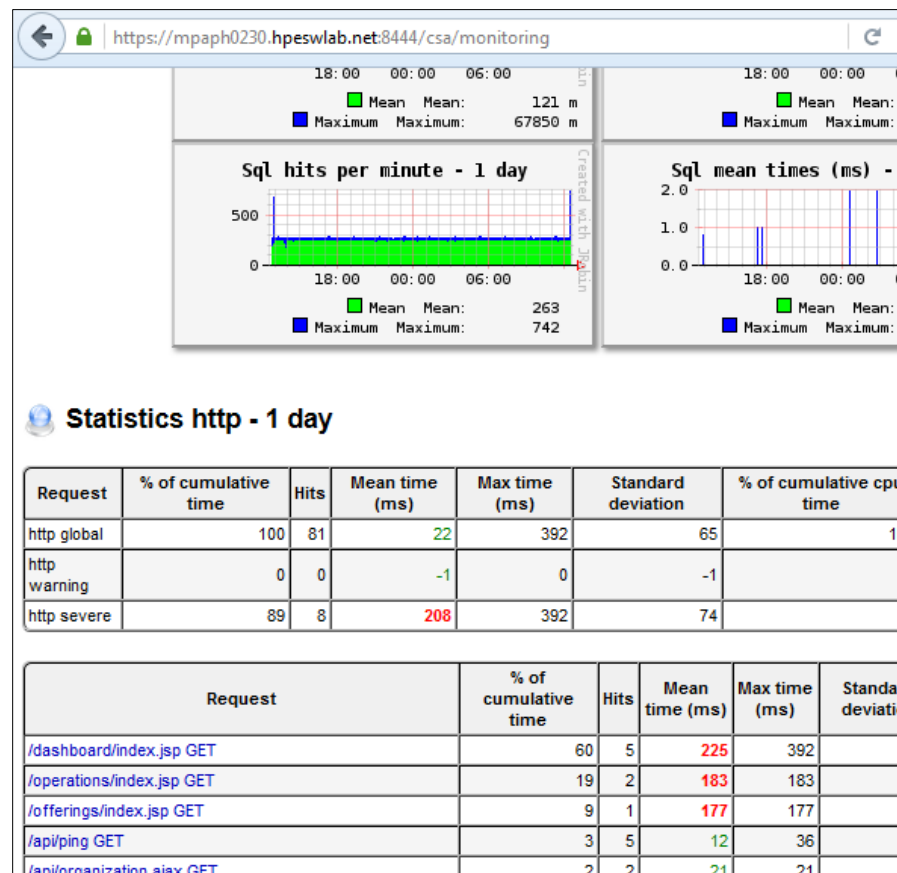

# Jconsole cluster - Jgroups

csaapp1 and csaapp2 are members of a cluster and csaapp1 is the master node. The Jconsole refresh interval shows changes dynamically.

## JavaMelody reports

The JavaMelody report is available at: [https://CSA\\_HOST:8444/csa/monitoring](https://CSA_HOST:8444/csa/monitoring) (login required). Here are screens displaying HTTP request statistics:

# SQL statistics

This screen displays SQL statistics.

## Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition of a document, go to the following URL and sign-in or register: <https://softwaresupport.hp.com>.

Select Manuals from the Dashboard menu to view all available documentation. Use the search and filter functions to find documentation, whitepapers, and other information sources.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your Hewlett Packard Enterprise sales representative for details.

## Support

Visit the Hewlett Packard Enterprise Software Support Online web site at <https://softwaresupport.hp.com>.
