> **Note:** To download the latest updated documentation set for HPE Systinet, go to URL
> http://support.openview.hp.com/selfsolve/manuals and search for Systinet 10.03 release. The

online help comes integrated with Systinet application UI.

In this Release

HPE Systinet 10.03 includes the following enhancements and improved features:

- New look and feel of the user experience in HPE Systinet.

- Surveys - you can create survey definitions that consists of the questions on which you want to do a survey.

- Enhanced security feature.

- Support for JDK 8 and Swagger 2.0.

- Import data in spreadsheet format. You can transfer spreadsheets or relational databases data from other systems to HPE Systinet.

Installation Notes

The distribution is a complete installer and the file is called *hpe-systinet-10.03.jar*. For installation instructions, refer to the *HPE Systinet Installation and Configuration Guide*.

Review the licensing agreements, and terms and conditions carefully prior to installation.

Known Issues and Limitations

The version of HPE Systinet has the following known issues or limitations:

1. Integration of UDDI, BSM, ALM and Data Power RGIF servers are not supported.

2. The hot fixes of the following versions of HPE Systinet are not part of this release:

    a. Systinet 4.03.

    b. Systinet 4.10.

    c. Systinet 10.00.

    d. Systinet 10.01.

    e. Systinet 10.02.

3. Migrating your data from 10.0x to 10.03 has the following know issues:

    a. The import fails, if you try to import relations from the script `ipep-api`.

       Root Cause: The script `ipep-api` is a system artifact and is not imported in normal import mode.

       Resolution: Make the script `ipep-api` as a non-system artifact, so that it is imported and overwrite the one in the repository.

       To overwrite the file, open the file `SYSTINET_HOME/conf/migrationblacklist.txt` and remove the following:

       `script/ipep-api`

    b. The import fails, if you try importing lifecycle processes.

       Root Cause:Two or more lifecycle processes are applied to same artifact type with **Automatically Assigned** set to **True**.

       Resolution: Keep only on default lifecycle process for one artifact type. Set the **Automatically Assigned** value to **False** and change the **defaultProcess** tag in the image to **False**.

    c. UI customization is not imported because of changes in UI configuration schema in HPE Systinet 10.03.

       Root Cause: In HPE Systinet 10.03, the tag for UI configuration is different than that of the tag in Systinet 10.02. Hence it will no longer be valid.

Resolution:To update the tag, follow these steps:

i. Open the file EXPORTED_IMAGE/configuration/configuration-properties.xml

ii. Search for .uiconfig and change all the role to uiRole.

If the property refers to the file inside the folder data, open that file and do the same as shown in the following image:

4. The following known limitations will be fixed in the next release (10.04):

a. For importing a WSDL file, the synchronize option is not available in the **View** page (Internal Defect ID **18741**).

b. Synchronize tab is not available in the **Collection** page of Service Artifact (Internal Defect ID **19766**).

c. For *Analyst* login, the events are not getting updated (Internal Defect ID **19740**).

d. When importing .bpel file, the Business Process artifact is not getting created (Internal Defect ID **20522**).

e. The Excel file download does not verify for malicious code, macros, or links to executable files.

f. SSL is currently not implemented as per the HPEs encryption policy.
