# Introduction

HPE OBR is a cross-domain historical infrastructure performance reporting solution. It displays topdown reports from Business Service Management (BSM) Business Service and Business Application, HP Operations Manager (HPOM) Node Group or HP OMi10 perspective to the underlying infrastructure. It also displays bottoms-up reports from the infrastructure to the impacted Business Services and Business Applications or Node Groups. It leverages the topology information to show how the underlying infrastructure health, performance and availability affects your Business Services and Business Applications or Node Groups in the long term. You can navigate from higher level cross domain reports to detailed domain level reports.

This document lists and describes HPE Operations Bridge Reporter out-of-the-box content packs and their components. Download the latest version of OBR content packs from HPE ITOM Marketplace at [HPE Operations Bridge Reporter Content](https://marketplace.saas.hpe.com/itom/content/hpe-obr-core-content).
