

HPE Data Protector 10.0x Device Support Matrix

Version: 1.3

Date: March 2018

The latest Data Protector 10.0x support for storage devices consists of two matrices.

The first matrix presents Data Protector 10.0x compatibility with complete Hewlett Packard Enterprise Storage Area Network (SAN) environments. Every SAN environment listed in this matrix has been fully tested and is therefore highly recommended for high availability and mission-critical environments. These solutions provide customers 'one-stop shopping' and support for their SAN/FC environments with HP-UX, Windows, Linux, Solaris and IBM AIX operating systems: [BURA Compatibility Matrix](#)

The second matrix is included in the document and provides a concise list of both media technology and backup devices from all manufactures and vendors that are certified and supported with Data Protector 10.0x. All media technologies and devices listed as supported with HP-UX, Windows, Linux, Solaris and IBM AIX operating systems, are supported in both SAN/FC environments and in a direct SCSI-to-SCSI connection

Note: The compatibility matrices listed above are not the definitive list of SAN environments supported by Data Protector. These environments are those that have been fully tested and therefore are highly recommended. All media technologies and devices listed as supported with HP-UX, Windows, AIX, Linux and Solaris with *HPE Data Protector 10.0x Device Support Matrix* are supported in a SAN environment. The SAN is transparent to Data Protector. All SAN hardware components (HBA, routers, hubs etc.) are supported with Data Protector if the hardware components within the SAN are supported by a vendor or a solution provider.

This matrix displays support for both Storage Area Network (SAN) environments and direct attached storage connections. All media technologies and devices listed as supported with HP-UX, Windows, IBM AIX, Linux and Solaris are supported in both a SAN environment and in a direct attached storage connection. Data Protector supports only library and drive combinations supported by the hardware vendor.

The tables below list the media technology and backup devices that are certified and supported with Data Protector 10.0x. If both the media technology and the device/library are listed as supported upon the operating system on which it is to be connected, Data Protector 10.0x support exists.

Although other devices may work with Data Protector 10.0x, Hewlett Packard Enterprise only supports those listed within this document.

Explanation of symbols used within the matrix:

✓ refers to full Hewlett Packard Enterprise support.

● refers to devices that have been qualified as interoperable in HP-UX environments and supported by Data Protector 10.0x. Please see the HPE web page "[third party mass storage devices](#)". Only certain combinations have been tested and added to the "third party mass storage devices" matrix, all combinations not listed in the "[third party mass storage devices](#)" matrix are supported through "referenced support" with Data Protector 10.0x.

☑ refers to "referenced support". Some combinations have been qualified as interoperable in HP-UX environments and supported by Data Protector 10.0x. Please see the HPE web page "third party mass storage devices". For all other combinations, "referenced support" incorporates full Hewlett Packard Enterprise support for Data Protector 10.0x only. For any device-related issues, please contact the corresponding product vendor first.

In addition, consider the following:

- For all devices listed in tables below, please check the hardware I/O bus configuration with your device vendor to make sure your device also supports the I/O bus architecture.

- Tape pool recycle management and a spare pool configuration is not supported when the tape library is populated with incompatible media from the same media type.
- The IBM AIX Media Agent supports drives only; library robotic must be connected to a system that supports a Data Protector Media Agent with robotics support, that is an HP-UX, Solaris, Linux or a Windows system.
- On HP-UX libraries with more than one SCSI interface, the robotic control is not supported with EISA-SCSI card.
- STK ACSLS libraries are supported with HP-UX, Windows, Solaris SPARC, Linux, and IBM AIX Media Agents. However, it is possible for all other Data Protector Media Agents to control ACSLS robotics indirectly through the HP-UX, Windows, Solaris or IBM AIX Media Agent.
- Data Protector magazine support is available only with DDS and DLT tape drives.
- Some devices do not support SCSI auto-configuration and must be configured manually.
- Data Protector enables sharing of multi-drive libraries (libraries with more than one SCSI-II interface) between multiple systems and multiple cells, with robotic control running on an HP-UX, Windows or Solaris system.
- Library drives and robotics can be shared between multiple cells using the Manager-of-Managers server cell and CMMDB (Centralized Media Management Database).
- The library extension license is required for us of libraries with more than 60 slots.
- Magneto-optical WORM (Write Once Read Many) media are not supported by Data Protector. Although all magneto-optical drives do support magneto-optical WORM media, only the magneto-optical re-writable media are supported by Data Protector.

- ¹ Deployment of a File Library utilizing a cloud gateway such as AWS Storage Gateway or NetApp AltaVault as storage is included.
- ² To utilize HPE USB devices on Windows, the HPE Mass Storage Driver (HPUSBMSC.SYS) driver is required.
- ³ Details of supported Linux distributions for drive based encryption are available in the *HPE Data Protector 10.0x Platform and Integration Support Matrix*.
- ⁴ The IBM AIX media agent supports drives only; the library robotic must be connected to a system that supports a Data Protector Media Agent with robotic support which supports the library (that is an HP-UX, Solaris, Linux or Windows system).
- ⁵ Minimum device firmware required for VLS Accelerated Deduplication: 6.0.0.2 for VLS 9200/12200.
- ⁶ When using iSCSI initiator software, only SUSE Linux Enterprise Server (SLES) 10 SP2 and SLES 11 are supported.
- ⁷ Supports StoreOnce software version 3.16.x and earlier. For information on the StoreOnce Backup systems and features supported by this StoreOnce software version, see the [BURA Compatibility Matrix](#).
- ⁸ Supported only with SUSE Linux Enterprise Server (SLES) 11 and RHEL 5.4.
- ⁹ Refer to the Data Domain web link at <http://www.emc.com/products/family/data-domain-family.htm> to get details on the specific models. For Data Domain Boost integration, see the *HPE Data Protector Platform and Integration Support Matrix*.
- ¹⁰ File devices created on the ExaGrid NAS appliances are supported.
- ¹¹ To utilize IBM 3584 on Linux, the IBM device drivers are required. These can be obtained from the following web page: http://www-1.ibm.com/support/all_download_drivers.html
- ¹² Storagetek libraries with ACSLS are not supported on SLES 12.
- ¹³ SL3000 AEM import/export slots is currently limited to 249 import/exports per job.
- ¹⁴ This device requires the ACSLS software from StorageTek. The following versions of ACSLS have been tested with Data Protector:
 - 5.2, 5.3, 5.3.2, 5.4
 - 6.0, 6.01, 6.1, 6.1.1
 - 7.0, 7.1, 7.1.1, 7.2, 7.3
 - 8.0.x, 8.1.x, 8.2.x, 8.3
- ¹⁵ Native IBM drivers are required for use of this library. Robotic arm driver should not be installed. Cleaning Tape is not supported with this library.
