Documentation Updates

To check for recent updates or to verify that you are using the most recent edition of a document, go to: <https://softwaresupport.hpe.com/>.

This site requires that you register for an HP Passport and to sign in. To register for an HP Passport ID, click **Register** on the HPE Software Support site or click **Create an Account** on the HP Passport login page.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your HPE sales representative for details.

Support

Visit the HPE Software Support site at: <https://softwaresupport.hpe.com/>.

Most of the support areas require that you register as an HP Passport user and to sign in. Many also require a support contract. To register for an HP Passport ID, click **Register** on the HPE Support site or click **Create an Account** on the HP Passport login page.

To find more information about access levels, go to: <https://softwaresupport.hpe.com/web/softwaresupport/access-levels>.

HPE Software Solutions Now accesses the HPSW Solution and Integration Portal website. This site enables you to explore HPE Product Solutions to meet your business needs, includes a full list of Integrations between HPE Products, as well as a listing of ITIL Processes. The URL for this website is <https://softwaresupport.hpe.com/km/KM01702731>.

List requests in the catalog	201
List subscriptions in the catalog	203
Send documentation feedback	205

Application Programming Interface

Cloud Service Automation (CSA) provides a REST (REpresentational State Transfer) Application Programming Interface (API) that allows application developers to interact programmatically with many of the capabilities that CSA offers in the *Cloud Service Management Console* and the *Marketplace Portal*.

CSA exposes subscription, service, and resource information through REST API calls. You can exercise all REST API calls programmatically and from an HTTP client. You'll find more information on HTTP clients in ["Retrieving information using REST calls"](#).

The information is designed to help you learn about the APIs by introducing the CSA capabilities that can be accessed programmatically, how to access them, and walking through several examples.

Assuming that you:

1. Understand how to use a REST API.
2. Have installed and set up CSA, following the instructions in the *Cloud Service Automation Installation Guide* and the *Cloud Service Automation Configuration Guide*.

Consumption APIs

The following public API calls provide access to CSA consumer data. These calls were introduced in CSA 4.x and can be exercised through a browser at: `https://<host>:<port>/csa/apidocs.jsp` (substitute the host and port information appropriate for your CSA environment). You can make API calls and view the response from your server. This set of API calls is referred to as the *Consumption APIs*.

Note: The API calls found in this interactive content can also be exercised programmatically or through a REST client. These consumption APIs are not documented in this guide.

The consumption APIs are made up to two groups (management APIs and consumer APIs), based on the use cases they address. The management API includes calls needed in CSA management roles such as system administrators, service designers, and so on. The consumer API includes calls needed in CSA consumer actions, such as shopping for and managing IT services.

The management API uses basic authentication whereas the consumer API starts with `/mpp` and use the X-Auth-Token parameter that is retrieved from the `idm-service` token call.

List of management APIs

API	Description
blueprint	Get information for blueprints
capsule	Install, list, and view capsule content
catalog	Manage service catalogs
component-template	Manage service topology component templates
component-type	Manage service topology component types
composition	List the candidate topologies that can fulfill the given partial topology
constraint	View property constraints
deployment	Manage service topology deployments
definition	Manage process definitions
design	Manage high-level design information
graph	Manage the graph definition of a design
group	Manage groups
instance	Manage service instances
javascriptstore	Manage the javascript repository
lifecycle	View lifecycle actions
metamodel	Manage metamodels for topology and sequence designs
option-model	Manage the option model
offering	Manage the association between resource offerings and resource providers
palette	Retrieve palettes related to designs
property	Manage properties

API	Description
binding	Manage option model property binding
processengine	Manage process engines
provider	Manage resource providers
request	Manage service requests
offering	Manage resource offerings
subscription	Manage subscriptions
tag	Manage tags
topology	Manage service topologies
useraccess	Manage user access for service design containers

Note: API calls including “(internal use only)” in their description should not be used. These are intended for CSA product development only.

List of consumer APIs

API	Description
csa-group	Manage groups (Can only be used by consumer administrators.)
csa-organization	View information about organizations (Can only be used by consumer administrators.)
csa-user	View users (Can only be used by consumer administrators.)
mpp-approval	Manage approvals
mpp-blobstore	Manage small files such as icons
mpp-cart	Manage carts
mpp-catalog	Manage catalogs
mpp-category	View categories
mpp-detail	Manage service details

API	Description
mpp-instance	View service instance information
mpp-notification	View subscriptions and notifications
mpp-offering	View service offerings
mpp-order	Place an order and manage existing orders
mpp-organization	View organization information
mpp-processengine	Manage process engines
mpp-property	View dynamic property's values
mpp-request	Manage service requests
mpp-subscription	Manage subscriptions
mpp-tag	Manage tags
mpp-user	View user information
mpp-wizard	Read a wizard offering with Marketplace Portal

Note: API calls including “(internal use only)” in their description should not be used. These are intended for CSA product development only.

See "[Using consumption API with a browser](#)" for more information on executing an API call from this interactive content.

The following is an example of the content displayed for a consumption API call:

component-type : Manage service topology component types			
	Show/Hide	List Operations	Expand Operations
GET	/topology-model/component-type/{typeId}	Read a topology component type	
PUT	/topology-model/component-type/{typeId}	Update topology component type	
DELETE	/topology-model/component-type/{typeId}	Delete a topology component type	
GET	/topology-model/component-type/	List topology component types	
POST	/topology-model/component-type/	Create a topology component type	

You can click on any of the methods listed to get detailed content for that call, and an interactive "Try it out!" feature.

The content provides the following information:

- Uniform Resource Identifier (URI) syntax for each call
- Query parameters
- Data type of each parameter
- Model and schema information, if applicable
- Interactive "Try it out!" dialog that lets you submit calls to the server, view the results, and understand how to construct the REST URIs and any request body.

The following is an example of the information displayed when you click DELETE:

component-type : Manage service topology component types

Show/Hide | List Operations | Expand Operations | Raw

GET

/topology-model/component-type/{typeId}

Read a topology component type

PUT

/topology-model/component-type/{typeId}

Update topology component type

DELETE

/topology-model/component-type/{typeId}

Delete a topology component type

Parameters

Parameter	Value	Description	Parameter Type	Data Type
typeId	(required)	topology component type id	path	string

Error Status Codes

HTTP Status Code	Reason
400	Bad request
403	Authorization failure
404	Not found
500	Internal server error

Try it out!

GET

/topology-model/component-type/

List topology component types

POST

/topology-model/component-type/

Create a topology component type

composition : Topology Composition handling

Show/Hide | List Operations | Expand Operations | Raw

Legacy APIs

CSA continues to support the REST API introduced in the CSA 3.x releases. We'll refer to these calls as the **Legacy CSA 3.x API** or simply **Legacy API**. Though there is some overlap between the information available through this API and through the consumption API, the legacy API provides access to additional information not available through the consumption API. This document includes information on each call:

- URI syntax
- Method (operation)
- Parameter descriptions
- Examples are often included

List of legacy APIs

The following API calls are accessed programmatically or through an HTTP client. These calls are documented in ["Legacy APIs" on page 51](#).

API	Description
artifact	View, create and modify artifacts
availablevalues	Retrieve the list of available values for a dynamic property
catalog	View, create and modify information related to catalogs
export	Export supported artifact(s) as a content archive
import, import_result	Import supported artifact(s) from a content archive
lifecycleengine	View and schedule lifecycle actions
login	Provide credentials for REST API calls
notification	View and send notifications
organization, orgInformation	View and modify organization information
processinstances	View execution results from OO flows
resourceprovider	Retrieve a list of resource providers that matches the access point URL with the access point URL specified when calling this

API	Description
	API.
search	Find specified information in artifacts
user	View information related to users
utilization	View resource utilization information for a subscription

See "[Retrieving information using REST calls](#)" for detailed information on how to exercise API calls.

Simplified API

Simplified APIs are a new set of user friendly REST APIs.

Service Request API

Service Request API is a simplified API for handling requests. You can use this API to:

- Submit a service request to create, modify or cancel a subscription.
- Issue user actions on a subscription,
- Resubmit a modify request that has failed
- Submit a request based on an existing request.

Features

Service Request API has the following features:

- To make the API portable across different environment, you can reference the Option Sets, Options and Properties by their display names instead of Ids.
- Inputs are specified in the following hierarchy: Option Set -> Option -> Property.

For child Option Sets nested within an Option Property, it is not necessary to maintain the hierarchy. The Option Sets are flat array regardless of whether the Option Set is at the top level or nested.

- You can reference the Option Sets, Options and Properties by their display names.
- Instead of passing all option properties to the request body, you can pass only the options that are selected and the properties that have values different from the default value.

- The API has thorough error handling capabilities with clear error codes. A detailed message about the problem is provided so that the caller can take corrective action.
- The API thoroughly validates the request body input and sends errors with details.
- APIs are versioned according to the semantic versioning scheme.

Base URL

`https://<csa url>:8444/csa/api/urest/v1.0.0/serviceRequest`

Request Header and Authorization Parameters

Name	Description
Content Type	application/json
Authorization	Base64 encoded username/password of the user who has the access to execute a REST call.
X-AUTH-TOKEN	Authorization token obtained from IDM.

Details

URI	csa/api/urest/v1.0.0/serviceRequest
Method	POST
Returns	200 - Success 400 - Invalid inputs 403 - Unauthorized or invalid user For more information, see the section Response and Error Handling .

Request Body Parameters

Name	Description
action	You can perform the following actions:

Name	Description
	• ORDER • MODIFY_SUBSCRIPTION • CANCEL_SUBSCRIPTION • RESUBMIT_REQUEST • UPGRADE_SUBSCRIPTION • [name of the PUBLIC ACTIONS]
requestReference	You can use this API to create an order, modify a subscription or cancel a subscription. Depending on the action, the requestReference either takes the name of the offering or the value of the subscriptionId/ componentId/ resourcesubscriptionId . While creating an order, this parameter refers to the name of the offering based on which the order is created. While modifying or canceling a subscription, this parameter refers to the subscription ID. For an user action, requestReference would refer to the component id or the resource subscription id depending on where the actions are attached in the original design.
catalogName	This parameter specifies the internal name of the catalog in which the offering is published (in case of ORDER request). Note: This parameter does not refer to the display name.
catalogId	This parameter specifies the ID of the catalog that is associated with the Service Offering. If there are multiple catalogs with the same name, then it is mandatory to specify this parameter. If the catalog name is unique in an environment, then this parameter is not mandatory.
basedOn	Use this parameter, if you are creating a service request based on an existing service request.
onBehalf	Use this parameter to execute a request on behalf of the specified user. Only a Consumer Administrator can perform this operation.

Name	Description
onBehalfOrg	Use this parameter to execute a request on behalf of the specified user (specified using the OnBehalf parameter) in a specified organization. If the user or organization does not exist then they are created. Only a CSA administrator can perform this operation.
subscriptionName	This parameter specifies the name of the subscription that this request will create or update.
subscriptionDescription	This parameter specifies the description for the subscription that this request will create or update
startDate	This parameter specifies the start date of the subscription. It only accepts Coordinated Universal Time (UTC). You cannot modify the start date. For example: 2017-06-20T11:37:19.000Z
endDate	This parameter specifies the end date of the subscription. It only accepts UTC. If end date is not specified then it is considered to be a recurring subscription.
ownerGroup[]	This parameter specifies the canonical name of the group. If this parameter is not specified, then it is assumed that this subscription is owned individually and not available to a group. Syntax: [{ "groupName": "<canonical name of the group>" }]
upgradeServiceOfferingName	This parameter specifies the name of the offering to which the subscription is to be upgraded. Use this parameter only if the action performed is UPGRADE_SUBSCRIPTION.
inputProperty[]	For user action, this parameter contains a list of properties that are require inputs. If the action is ORDER or MODIFY_SUBSCRIPTION, this would be a single property of name 'OPTION_SETS' and the value would contain the flattened list of option sets. For ORDER or MODIFY_SUBSCRIPTION, you do not have to specify the entire Option Model. You can only provide the Option Sets that have changed values along with the Options and Properties. You need not specify the hierarchy of the Option Set. In an Option

Name	Description
	Model, if there are child Option Sets, then you can specify them as a list. You can either specify the display name or the internal name of the Option set, Option or Properties as shown in the following example: For example: <pre> "inputProperty": [{ "name": "OPTION_SETS", "values": [{ "value": [{ "name": "<internal name of the optionSet> ", (Or) "displayName": "<displayName of optionSet>", "options": [{ "name": "<internal name of the option>", (Or) "displayName": "<displayName of option>", "property": [{ "name": "<internal name of the property>", (Or) "displayName": "<displayName of prop>", "values": [{ "displayName": "<displayName of value>", "value": "<internal value>" }] }] }] }] }] }] </pre> For detailed information about <code>inputProperty[]</code>, see the section Input Properties.
<code>validateDynamicPropFromReq</code>	This parameter is used to turn off the check of dynamic values against the available values returned by the dynamic scripts associated with a property. By default this parameter is set to 'true'. If the incoming request has properties that has dynamic scripts associated with it, the scripts is executed with appropriate parameters and the

Name	Description
	availableList is computed. The 'displayName' and 'value' of the Value is compared against this 'availableList'. If the value is not present in the availableList, then an error is reported.

Input Properties

The input properties for ORDER and MODIFY requests are organized in the following hierarchy:

The following table describes the fields that can be used in the input properties parameter:

Field	Description
Option Set	
name	This parameter denotes the internal name of the Option Set associated with the offering. This name does not change even when the offering is exported or imported to a different machine. Note: You can either specify the name or the display name.
displayName	This parameter denotes the display name of the Option Set. Note: You can either specify the name or the display name. Caution: In the Option Model, if the display name is not unique then an error is

Field	Description
	reported.
options[]	This parameter is used to specify one or multiple options.
Option	
name	This parameter denotes the internal name of the Option. This name does not change even when the offering is exported or imported to a different machine.
displayName	This parameter denotes the display name of the Option. Note: You can either specify the name or the display name. Caution: In the Option Set, if the display name is not unique then an error is reported.
isSelected	This parameter is used to specify if the option is selected or not. The default value is true.
property[]	If there is a change in the value of properties that are associated with the Option, then use this parameter to list such properties. If you do not specify the property, then the default value associated in the offering is used. If the property is mandatory or if it is associated with a dynamic script, then an error is reported if the property is missing.
Property	
name	This parameter denotes the internal name of the Property.
displayName	This parameter denotes the display name of the Property. Note: You can either specify the name or the display name. Caution: In the Option, if the display name is not unique then an error is reported.
values[]	This parameter is used to list the values associated with the Property.
Values	
name	This parameter denotes the internal value associated with the Value of the property.
displayName	This parameter denotes the display name associated with the Value. This is used only when a static or dynamic list is associated with the Property. For a non-dynamic property, you need not specify the display name.

Response

If serviceRequest is created successfully, then the response message contains the URI of the newly created resource along with the following details:

Field	Description
@uri	The URI of the created service request
@type	Service request
Name	Name of the created service request
Description	Description associated with the service request
Created	Time (in UTC) when the resource was created

For example:

```
{
"@uri": "/mpp/mpp-request/8a828faf5cc47c75015cc95d61fd11e3",
"@type": "serviceRequest",
"name": "Sample Request for Demo ",
"description": "This is a sample request that is created for demoing the simplified API",
"created": "2017-06-17T06:35:59.357Z"
}
```

Error Handling

Every HTTP Error code that matches with 2XX will have the following fields:

Field	Description
@uri	The URI of the created service request
@type	Service request
Name	Name of the created service request
Description	Description associated with the service request
Created	Time (in UTC) when the resource was created

- **HTTP Status Code 400**

If one or more input parameters (other than `inputProperty[]`) are invalid, then a generic error code `INVALID_DATA` is returned with the following description: One or more inputs are not valid.

The details of the each error encountered is provided within the `nestedErrors` array field.

For example:

```
{
  "errorCode" : "INVALID_DATA",
  "message" : "One or more inputs are not valid",
  "nestedErrors" : [{
    "errorCode" : "INVALID_CATALOG_NAME",
    "details" : "Unable to find the catalog with the name:'CPE Catalog'. Ensure that the 'name' (not the displayName) of the catalog is specified",
    "message" : "Catalog name is invalid"
  }, {
    "errorCode" : "INVALID_DATE",
    "details" : "Start Date specified: Sun Jun 11 17:07:19 IST 2017 is in the past. Please specify a current date or a date in the future",
    "message" : "Start date in the past"
  }, {
    "errorCode" : "INVALID_GROUP_OWNER",
    "details" : "User with id: 8a828faf5c53b3e2015c57abbddf0776 not part of the group: skfskdf",
    "message" : "Invalid owner group"
  } ]
}
```

Note: The API consolidates as many errors as possible under `nestedErrors` before reporting the `INVALID_DATA` error.

Some of the other errors that you can encounter are:

- `INVALID_ACTION_NAME`
- `INVALID_ON_BEHALF`
- `INVALID_CATALOG_NAME`
- `INVALID_OFFERING`
- `INVALID_PARAM`
- `INVALID_DATE`

If there is an error in the `inputProperty[]` field, then errors are not consolidated, instead the first encountered exception is reported.

For example:

```
{
  "errorCode" : "INVALID_OPTION_MODEL",
  "message" : "The value for dynamic property 'AppOwner' not found in request.",
  "data" : "com.hp.ccue.mpp.dao.util.MPPEException:
com.hp.csa.exception.InvalidOptionModelException: The value for dynamic property
'AppOwner' not"
}
```

Error Code	Error	Description
INVALID_OPTION_MODEL	Error in processing the Option Sets	The value provided for the name of Option Set or Option is invalid or incorrect.
INVALID_PROPERTY	Invalid Property or invalid Value for the Property	A required property was not specified or the provided values do not comply with the constraints.

• HTTP Status Code 403

You may get one of the following errors:

Error Code	Error	Description
UNAUTHORIZED_USER	Unauthorized user	User cannot create subscription based on the offering
INVALID_USER	Invalid user	Cannot find the user

For any other errors, `INTERNAL_ERROR` is reported with the message, details and data field along with additional information.

Examples

Example for creating a service request with OptionSet, Option, Property referenced with display Name:

```
{
  "requestReference": "SampleOffering_V2_91867fde-ef22-4e41-b5d7-10d21792c692",
  "catalogName": "TEST_CATALOG",
  "subscriptionName": "Demo Subscription 1",
  "subscriptionDescription": " Demo Subscription ",
  "startDate": "2017-07-11T09:47:19.000Z",
  "action": "ORDER",
  "inputProperty": [{
    "name": "OPTION_SETS",
    "values": [{
      "value": [{
        "displayName": "Business Information",
        "options": [{
          "displayName": "Application Details",
          "property": [{
            "displayName": "Project Name",
            "values": [{
              "value": "MyProj1"
            }]
          }]
        }]
      }]
    }]
  }]
}
```

Example for creating a service request with OptionSet/Option/Property referenced with internal name:

```
{
  "requestReference": "SampleOffering_V2_91867fde-ef22-4e41-b5d7-10d21792c692",
  "catalogName": "TEST_CATALOG",
  "subscriptionName": "Demo Subscription 1",
  "subscriptionDescription": " Demo Subscription ",
  "startDate": "2017-07-11T09:47:19.000Z",
  "action": "ORDER",
  "inputProperty": [{
    "name": "OPTION_SETS",
    "values": [{
      "value": [{
        "name": "A6AA9B73-EFA6-657A-BF86-A432593EBB64",
        "options": [{
          "displayName": "D2808B8C-46CB-F79C-96BA-A432593EC864",
          "property": [{
            "name": "ProjectName",
            "values": [{
              "value": "MyProj1"
            }]
          }]
        }]
      }]
    }]
  }]
}
```

Example for creating a service request where the property takes in a dynamic value:

```
{
  "requestReference": "SampleOffering_V2_91867fde-ef22-4e41-b5d7-10d21792c692",

    "name": "booleanInput",
    "values": [{
      "value": "false"
    }]
  }
]
```

Retrieving information using REST calls

This section provides information about preparing for and executing CSA REST API calls.

Communicate with CSA

Solution developers communicate with CSA using HTTP or HTTPS and parse the data structures returned by CSA. The default port for communication is 8444.

Consumption API data is returned in JSON format. Legacy API data can be returned in either XML or JSON format. You must set the HTTP headers Content-Type:application/xml or

application/json, and accept:application/xml or accept:application/json as appropriate for the call you're making.

Authentication with an integration account

Authentication is handled using HTTP basic authentication. The authentication value is provided to Legacy API calls and to the Consumption *tokens* API call via the basic authorization header.

When exercising an API call from an HTTP client or from the interactive API content, the authorization header is automatically generated. This authorization header is created using your CSA credentials that is required to get permission to make REST calls.

When exercising an API call from your application's code, you must create the authorization header. Supply the Base64 encoded value of the <username>:<password> string for the user you will use for authentication. The default credentials and authorization header for the Legacy and Consumption APIs are shown here:

API	Default user name	Password	Encoded credentials and authorization header
Legacy	csaTransportUser	Entered during CSA installation	Base64 encoded user:password: Y3NhVHJhbnNwb3J0VXNlcjppjc2FUcmFuc3BvcnRVc2Vy
			Authorization header: Basic Y3NhVHJhbnNwb3J0VXNlcjppjc2FUcmFuc3BvcnRVc2Vy
Consumption	idmTransportUser	Entered during CSA installation	This is used for the idm-service token call. Base64 encoded user:password: aWRtVHJhbnNwb3J0VXNlcjppZG1UcmFuc3BvcnRVc2Vy
			This is used for the idm-service token call. Authorization header: Basic aWRtVHJhbnNwb3J0VXNlcjppZG1UcmFuc3BvcnRVc2Vy

Note: If you log in to the Cloud Service Management Console, a CSRF (Cross-Script-Request-Forgery) token called `x-csrf-token` is created. This is added to the cookie.

For example,

Cookie: JSESSIONID=DIxnGcNlHazpEafSdKNvy-KA.csaqa-vm22; X-Auth-Token=eyJ0eXujSc;
XSRF-TOKEN=1a11afb8-b057-4f03-8b52-4bad19e3553a; orgName=TEST.COM

For information on managing built-in accounts, see the "Change CSA Out-of-the-Box User Accounts" section in the *Cloud Service Automation Configuration Guide*.

Consumption API authorization

Consumption API calls require an IdM authentication token. An authentication token is retrieved from the Identity Management component as demonstrated below. The Basic Authorization header as described in "[Authentication with an integration account](#)" will be used to retrieve this token. The *token.id* value returned in the response body is the token you need to include in the X-Auth-Token HTTP header.

HTTP method	POST
Header	See header information that follows.
REST URL	https://<CSAFQDN>:<port>/idm-service/v2.0/tokens
Payload	<pre>{ "passwordCredentials" : { "username" : "consumer", "password" : "cloud" }, "tenantName" : "CONSUMER" }</pre>
Parameters	None
Request body	See example that follows
Response body	See example that follows
Returns	200 - success 400 - improperly formatted request body (most common cause is missing Content-Type header) 401 - missing or incorrect basic authentication information 403 - authentication failure 415 - missing Accept or Content-Type header, or one of these headers is not set to application/json

Header	Value	Meaning
Accept	application/json	Output is in JSON format
Content-Type	application/json	Input message body is in JSON format

Header	Value	Meaning
Authorization	Basic aWRtVHJhbnNwb3J0VXNlcjppZG1UcmFuc3BvcnRVc2Vy	Default authorization header as described in "Authentication with an integration account" Base64 encoded value for idmTransportUser:<idmTransportUser password>

Note: The token has an expiration time. Generate a new one on expiry error.

Note: You must include the header information with all API calls.

The administrator credentials may be required for some API calls.

Example JSON request body:

```
{
  "passwordCredentials" : {
    "username" : "consumer",
    "password" : "cloud"
  },
  "tenantName" : "CONSUMER"
}
```

Example JSON response body:

```
{
  "token" : {
    "id" : "ab48a9efdfedb23ty3494",
    "expires" : "2010-11-01T03:32:15-05:00",
    "tenant" : {
      "id" : "t1000",
      "name" : "Consumer"
    }
  },
  "secondaryToken" : "1b07ae0018e34864b424a7ae0dd8e34",
  "refreshToken" : "C/poRbpxftaqZZ12JJYrWd2a1huDwEZ",
  "user" : {
    "id" : "u123",
    "name" : "consumer",
    "roles" : [ {
      "id" : "100",
      "name" : "ROLE_USER"
    }, {
      "id": "101",
      "name": "object-store:admin",
      "tenantId": "t1000"
    } ]
  }
}
```

```
}
```

For more information on use cases and examples, see ["Sample use cases"](#).

Legacy CSA 3.x API authorization

With the exception of login and orgInformation, legacy API calls require a `userIdentifier` parameter, as well as a basic authorization header created using an integration account as described in ["Authentication with an integration account"](#). Use the login API call to obtain a user's ID for the `userIdentifier` parameter. The user must have the necessary permissions to access the data requested by the API calls you will be making.

Note: Error code 401 (Not authorized) will be returned if the same user is not specified for authorization and for authentication. The exception to this is when `csaTransportUser` is used for authentication as it is accepted for authorization on behalf of other users.

To get, for example, the user ID for user `consumer` in organization `CONSUMER`, submit the following URL (via an HTTP client or application code as will be described shortly):

```
https://<host>:<port>/csa/rest/login/CONSUMER/consumer
```

The `<id>` value in the following return body is the `UserIdentifier` value you would use in further Legacy API calls:

```
<id>BFA0DB53DA414B90E04059106D1A24B5</id>
<isCriticalSystemObject>false</isCriticalSystemObject>
<description>service consumer user</description>
<detailedDescription>service consumer user</detailedDescription>
<iconUrl>http://localhost/csaconsumer/consumer</iconUrl>
<name>consumer</name>
<displayName>consumer</displayName>
<state>
  ...
</state>
...
```

This ID can be used in subsequent legacy API calls using `https://<host>:<port>/csa/rest/<api call>?userIdentifier=<id>`.

Executing REST calls

CSA REST API calls can be exercised through an HTTP client or programmatically from an application. The consumption API calls can also be exercised through the interactive content as explained in ["Using consumption API with a browser"](#). Some calls have more strict permission

requirements, administrator level permissions for example, so you will need to supply appropriate credentials.

The base URL for the Legacy API is `https://<host>:<port>/csa/rest`, which is appended with the specific URI for the API call. For example, to access the import API, you would use the following URL, substituting the host and port information appropriate for your environment:

`https://<host>:<port>/csa/rest/import`

The base URL for the Consumption API is `https://<host>:<port>/csa/api`, which is appended with the specific URI for the API call. For example, to access the mpp-offering API, you would use the following URL, again, substituting the host and port information appropriate for your environment:

`https://<host>:<port>/csa/api/mpp-offering`

Exercising API calls using an HTTP client

Though you can issue REST calls through any typical HTTP client (browser), you'll likely find it more convenient to use a client designed especially for developers making REST calls. These are often referred to as *REST clients*. A REST client organizes the information you'll work with when making REST calls: headers, methods, request and response bodies, and so on. A REST client makes it easier to compose and submit requests to the CSA 4.60 REST service APIs, as well as for viewing server responses.

A number of REST clients are available. You can add, for example, the REST console plug-in for Google Chrome as follows:

- Start Google Chrome.
- Open Chrome Web Store.
- Use search box to search for REST Console.
- Select Add to Chrome.

Example configuration of REST Console plug-in:

The screenshot shows the REST Console interface with three tabs: Options, Target, and Body. The Options tab is active, showing settings for General and Syntax Highlighting. The Target tab is also visible, showing the Request URI, Request Method, and Request Timeout. The Body tab is active, showing Content Headers and Request Payload. Callouts provide additional context for several fields:

- Options - General:** ☒ Hide Help Lines
- Options - Syntax Highlighting:** ☐ Hide Lines Numbers; Color Theme: ☒ Bootstrap, ☐ Default, ☐ Desert, ☐ Sunburst, ☐ Sons of Obsidian
- Target - Request URI:** `https://11.11.11.11:8444/csa/rest/login/CSA-Provider/admin` (Callout: URL including host, port, and API path)
- Target - Request Method:** GET (Callout: Simple "GET" call, no data)
- Target - Request Timeout:** 60 seconds
- Accept - Content-Type:** ☒ application/xml (Callout: Request either application/xml or application/json data)
- Accept - Language:** example: en-US
- Body - Content-Type:** ☒ application/xml (Callout: I will send data in application/xml type)
- Body - Encoding:** example: utf-8
- Body - Content-MD5:** example: Q2hY2sgSW50ZWdyaxR5IQ==
- Body - Request Payload:** RAW Body (example: XML, JSON, etc ...)
- Body - Custom Headers:** (Empty field)
- Buttons:** Send, GET, POST, PUT, DELETE, Reset, Save Defaults

Configure the basic authorization in the Authorization tab using a user name and password. See ["Authentication with an integration account"](#) for more information. This user must have privileges to access CSA REST APIs.

Example REST console authorization:

The screenshot shows the REST Console Authorization tab. The Authorization Header field is highlighted with a blue box, containing the text: `Basic YWRtaW46Y2xvdWQ=`. The Basic Auth button is also highlighted. Other buttons include Setup OAuth and Refresh OAuth.

When you issue a request, the output in the Response Body tab is similar to the following:

Using consumption API with a browser

In addition to being exercised programmatically or through an HTTP client, the Consumption API can be exercised through the “Try it out!” feature in the interactive API content. You will be prompted to log in to the Cloud Service Management Console to access this content. Basic authentication and authorization required to make REST calls will be configured as part of the login process.

This interactive content is presented in a web interface, and can be accessed at **https://<host>:<port>/csa/apidocs.jsp** from a browser, substituting the host and port information appropriate for your environment.

For example, the following sample contains calls for the component-type API:

component-type : Manage service topology component types		Show/Hide	List Operations	Expand Operations	Raw
GET	/topology-model/component-type/{typeId}				Read a topology component type
PUT	/topology-model/component-type/{typeId}				Update topology component type
DELETE	/topology-model/component-type/{typeId}				Delete a topology component type
GET	/topology-model/component-type/				List topology component types
POST	/topology-model/component-type/				Create a topology component type
composition : Topology Composition handling		Show/Hide	List Operations	Expand Operations	Raw
artifact : The operational reporting API for tags. (internal use only)		Show/Hide	List Operations	Expand Operations	Raw
definition : The API for managing process definition.		Show/Hide	List Operations	Expand Operations	Raw
design : The API for managing service designs. (internal use only)		Show/Hide	List Operations	Expand Operations	Raw

Note: API calls including “(internal use only)” in their description should not be used. These are intended for CSA product development only.

The content provides an easy access to the following information:

- URI syntax for each call
- Whether there are any required or optional query parameters
- The data type of each parameter
- Model and schema information, if applicable
- Interactive "Try it out!" dialogs that let you submit calls to your server, see the results, and understand how you need to construct your REST URIs and any request body.

The following steps provide an example of executing an API call:

1. If you have access to an CSA instance, launch the interactive API content from a browser at **https://<host>:<port>/csa/apidocs.jsp**.
2. If you are not already logged into CSA, you will be prompted to log in. The user must have appropriate authority to exercise CSA REST calls.
3. Locate the *mpp-organization* API call. Click on that the call title to expand it to show the GET method, if it is not already visible.
4. Click on the *GET* method to view the complete documentation for this call.

GET

/mpp/mpp-organization/{organizationName}

View organization information

Response Class

Model | Model Schema

Map {
 empty (boolean, optional)
}

Response Content Type

application/json ▼

Parameters

Parameter	Value	Description	Parameter Type	Data Type
organizationName	{required}	Unique name of organization	path	string
X-Auth-Token		Auth token	header	string

Error Status Codes

HTTP Status Code	Reason
400	Bad request
403	Authorization failure

Try it out!

5. organizationName is a required parameter. Enter an organization name from your CSA instance. You can use CONSUMER, a default organization provided out-of-the-box with CSA.
6. Include the IdM authentication token value in the X-Auth-Token parameter.
7. Click on the **Try it out!** button.
8. You should now see the request URL that was sent, as well as the response body, response code, and response headers for your request as shown in the following figure:

GET /mpp/mpp-organization/{organizationName} Show/Hide List Operations Expand Operations Raw Read organization information

```

Not every API call will be this simple to exercise, but this example demonstrates how the interactive API content is presented, and how REST calls can easily be made from this interface. In some

situations you will need to make other API calls first to get information necessary for parameters or a request body.

Making API calls from an application

REST calls can be made from your custom application code. Preparation for making these calls is similar to making them from an HTTP client. Authentication and authorization requirements as explained in ["Communicate with CSA"](#) must be met.

You also need to set the HTTP headers `Content-Type:application/xml` or `application/json`, and `accept:application/xml` or `accept:application/json` as appropriate for the call you are re making.

The content type `application/xml` only applies to the Legacy APIs.

Troubleshooting return codes

401 - Not authorized

See ["Communicate with CSA" on page 26](#) for steps to set up authentication.

403 - Forbidden

The user requesting details is not the owner of the object.

404 - Object not found

Check the body of your REST call to make sure it is properly formed and includes valid data.

409 - Conflict

The user attempted to create a duplicate object when one already exists in the system.

500 - Server exception

This is a generic error message that is sent when the server was unable to return a result.

Sample use cases

This section has sample use cases for CSA APIs.

List service offerings

Consumers can get a list of service offerings published on CSA using the offerings REST API.

HTTP method	POST
REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-offering/filter
Payload	{"approval":"ALL"}
Headers	X-Auth-Token: <token> Accept: application/json Content-type: application/json
Response	Returns the list of offerings

For more information on payload options, see the documentation available at <https://<host>:<port>/csa/apidocs.jsp>.

Sample response:

```
"id": "9028525b4a7aa888014a7ae4d1ad0063",  
"catalogId": "90d9650a36988e5d0136988f03ab000f",  
"catalogName": "Global Shared Catalog",  
"displayName": "Rest Demo",  
"offeringVersion": "1",  
"category": {  
  "displayName": "Application Services",  
  "name": "APPLICATION SERVICES"  
},
```

Service offering details

This REST API provide details on customer options configured during service design. These options have to be included during order of a subscription. Check ["Service request payloads in CSA 4.x" on page 50](#) to parse the option model details.

HTTP method	GET
REST API	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-offering/ <serviceofferingid>?catalogId=<catalogid>&category=<category.name>

REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-offering/ 9028525b4a7aa888014a7ae4d1ad0063?catalogId=90d9650a36988e5d0136988f03ab000f &category=APPLICATION_SERVICES

},
```

Create subscription

Order request is a HTTP POST operation. The service request that needs to be submitted to CSA has two parts bundled as XML structure. First part is on subscription information and second is about customer options. Refer ["Service request payloads in CSA 4.x" on page 50](#) to check sample payloads to generate service request with or without option model.

HTTP method	POST
HTTP header	header Content-Type: multipart/form-data; boundary=Abcdefgh
	Accept: application/json

Payload	<pre>--Abcdefgh Content-Disposition: form-data; name="requestForm" { "categoryName":"APPLICATION_SERVICES", "subscriptionName":"sampleRequest", "subscriptionDescription": "This is a sample request", "startDate":"2015-01-24T05:32:17.000Z", "endDate":"2016-01-23T05:32:17.000Z", "fields":{ "field_9028525b4a7aa888014a7ae4d1bc006a":true, "field_9028525b4a7aa888014a7ae4d1bc006e":2, "field_9028525b4a7aa888014a7ae4d1cc0071":true, "field_9028525b4a7aa888014a7ae4d1cc0074":2048}, "pricing": {}, "action":"ORDER" } --Abcdefgh--</pre>
Response	<pre>{ "id": "402894a34a0397f7014a287cd96f0770" }</pre>

Note: Content-type header is a multipart formdata and requires a boundary parameter to identify form data. In this case boundary is set to Abcdefgh.

Payload should start with the boundary value set in the header prepending "--" to the value. Payload start with

-- Abcdefgh

Payload should end with the boundary value in the header prepending "--" and ending with "--".

Payload ends with

--Abcdefgh--

Subscription list

HTTP method	POST
REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-subscription/filter
Payload	<pre>{ "status":null,</pre>

	<pre>"category":null, "name":null "healthStatus":null }</pre>
Response	The highlighted ID is the subscription ID - ff8080814b15cb4b014b1a70cdc0012a <pre>"members": [{ "@self": "/csa/api/mpp/mpp- subscription/ff8080814b15cb4b014b1a70cdc0012a", "@type": "urn:x-hp:2012:software:cloud:data_model:service- subscription", "name": "sampleRequest", "ext": { "csa_name_key": "sampleRequest" }, "id": "ff8080814615cb4b014b1a70cdc0012a", "owner": "consumer", "image": "csa/images/library/Service_Design.png", "status": "ACTIVE", "catalogId": "90d9650a36988e5d0136988f03ab000f", "serviceId": "9028525b4a7aa888014a7ae4d1ad0063", "serviceImage": "/csa/images/library/Service_Design.png", "serviceName": "Rest Demo", "cancelable": true, "transferable": false, "modifiable": false, "modifiableOptions": false, "reorderable": false, "deletable": false,</pre>

Subscription details

Subscription details REST call is issued to fetch Base price, Recurring price, Total price and Service Instance Id. Service Instance is retrieved to fetch components that make up the service like server, application, properties etc.

Subscription details can be used to trace back order request and offering details.

HTTP method	GET
REST API	<code>https://<CSAFQDN>:<port>/csa/api/mpp/mpp-subscription/<subscriptionid></code>

REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/ mpp-subscription/ff8080814b15cb4b014b1a70cdc0012a
Response	Following parameters will be useful for other REST calls Catalog Id: 90d9650a36988e5d0136988f03ab000f Instance Id: ff8080814b15cb4b014b1a70cf77014e <pre> "members": [{ "@self": "/csa/api/mpp/mpp- subscription/ff8080814b15cb4b014b1a70cdc0012a", "@type": "urn:x-hp:2012:software:cloud:data_model:service- subscription", "name": "sampleRequest", "ext": { "csa_name_key": "sampleRequest" }, "id": "ff8080814615cb4b014b1a70cdc0012a", "owner": "consumer", "image": "csa/images/library/Service_Design.png", "status": "ACTIVE", "catalogId": "90d9650a36988e5d0136988f03ab000f", "serviceId": "9028525b4a7aa888014a7ae4d1ad0063", "serviceImage": "/csa/images/library/Service_Design.png", "serviceName": "Rest Demo", "cancelable": true, "transferable": true, "modifiable": true, "modifiableOptions": true, "reorderable": true, "deletable": false, + "attachments": [...], + "subscriptionTerm": {...}, + "initPrice": {...}, + "recurringPrice": {...}, + "category": {...}, "lastUpdated": "2015-01-24T05:36:54.347Z", "requiredApproval": false, "requestId": "ff8080814b15cb4b014b1a70bbaa00e6", "showViewRequest": true, "ownerEmail": "", "instanceId": "ff8080814b15cb4b014b1a70cf77014e", "instanceState": "ACTIVE", "offeringVersion": "1", + "history": [...] } </pre>

Service instance details

Instance details call is used to fetch service components, public actions and its properties defined on your subscription. To get Service instance ID use Subscription details REST call.

HTTP method	GET
REST API	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-instance/<serviceinstanceid>?catalogId=<catalogid>
REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-instance/ff8080814b15cb4b014b1a70cf77014e?catalogId=90d9650a36988e5d0136988f03ab000f
Response	Component Id: ff8080814b15cb4b014b1a70cf770171 Public Action: My_Action_October 13, 2014 5:18:11 AM UTC

Sample response:

```
"serviceInstance": {
  "name": "a925721a-c0c4-4d14-8cd6-32cad2783a62",
  "displayName": "RESTSample",
  "description": "",
  "image": "csa/images/library/Service_Design.png"
},
"components": [
  {
    "id": "ff8080814b15cb4b014b1a70cf770171",
    "name": "SERVER__Sat Oct 04 18:03:08 IST 2014",
    "displayName": "Server",
    "description": "This is the default template for the selected component type, it contains the same settings as the base component type definition.",
    "image": "csa/images/categories/component_type/server.png",
    "status": "DEPLOYED",
    + "properties": [...],
    - "serviceAction": [
      -{
        "id": "ff8080814b15cb4b014b1a70cf770172",
        "name": "My_Action_October 13, 2014 5:18:11 AM UTC",
```

Cancel subscription

HTTP method	POST
HTTP header	Content-Type: multipart/form-data; boundary=Abcdefgh
	Accept: application/json
REST API	https://<CSAFQDN>:<port>/csa/api/mpp/ mpp-request/<requestid>?catalogId=<catalogid>
REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-request/ ff8080814b15cb4b014b1a70cdc0012a?catalogId=90d9650a36988e5d0136988f03ab000f
Payload	--Abcdefgh Content-Disposition: form-data; name="requestForm" { "action": "CANCEL_SUBSCRIPTION" } --Abcdefgh--

Manage your Subscription

There are two cases where you can use REST call to manage your subscription:

1. Request customer actions (public actions).
2. Modify a subscription to update subscription attributes or options.

Request a public action

A public action "My_Action" is defined on the component. "My_Action" takes three inputs String, Integer and a Boolean. Request payload has to include all these inputs while requesting a public action call.

From Service Instance details, get component ID where public action has been defined and the name of the public action.

Component Id: ff8080814b15cb4b014b1a70cf770171

Public Action: My_Action_October 13, 2014 5:18:11 AM UTC

HTTP method	POST
HTTP header	Content-Type: multipart/form-data; boundary=Abcdefgh Accept: application/json
REST API	https://<CSAFQDN>:<port>/csa/api/ mpp/ mpp-request/ <componentid>?catalogId=<catalogid>
REST URL	https://<CSAFQDN>:<port>/csa/api/ mpp/mpp-request/ ff8080814b15cb4b014b1a70cf770171?catalogId=90d9650a36988e5d0136988f03ab000f
Payload	--Abcdefgh Content-Disposition: form-data; name="requestForm" { "action": "My_Action_October 13, 2014 5:18:11 AM UTC", "subscriptionId": "ff8080814b15cb4b014b1a70cdc0012a", "fields": { "booleanInput": false, "stringInput": "xxx", "integerInput": 2 } } --Abcdefgh--

Note: If Public action is defined on a resource Subscription, then fetch resourceSubscription ID from Service Instance details call and issue an mpp request to CSA. The URI in such a case would be:

/api/ mpp/mpp-request/<resourceSubscriptionId>?catalogId=<catalogid>

Modify subscription

To modify a subscription, fetch the required option model details from the subscription details call, as shown in the following example:

HTTP method	GET
REST API	https://<CSAFQDN>:<port>/csa/api/ mpp/mpp-subscription/<subscriptionid>/modify
REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/ mpp-subscription/ff8080814b15cb4b014b1a70cdc0012a/modify

CPU options:

```
"id": "field_ff8080814b15cb4b014b1a70cdef0132",
"displayname": "Number of CPUs",
```

```
"name": "EC9B910A_82A3_B51B_744B_DB26DCD23898",
"description": "",
"visible": true,

"id": "field_ff8080814b15cb4b014b1a70cdef0133",
"displayName": "CPUs",
"name": "CPU",
"description": "",
"visible": true,
"disabled": false,
"hidden": false,
"value": 2,
```

Memory options:

```
"id": "field_f8080814b15cb4b014b1a70cdef0138",
"displayName": "Memory (GB)",
"name": "C1988678_C6C2_A878_FEEE_DB29D1FF54DF",
"description": "",
"visible": true,

"id": "field_ff8080814b15cb4b014b1a70cdef012c",
"displayName": "Total Memory",
"name": "Memory",
"description": "",
"visible": true,
"disabled": false,
"hidden": false,
"value": 2048,
```

Issue a subscription modify request

HTTP method	POST
HTTP header	Content-Type: multipart/form-data; boundary=Abcdefgh
	Accept: application/json
	X-Auth-Token: Your token value from Get token Call
REST API	https://<CSAFQDN>:<port>/csa/api/ mpp/ mpp-request/<subscriptionid>?catalogId=<catalogid>
REST URL	https://<CSAFQDN>:<port>/csa/api/ mpp/mpp-request/ ff8080814b15cb4b014b1a70cdc0012a?catalogId=90d9650a36988e5d0136988f03ab000f
Payload	--Abcdefgh

	<pre>Content-Disposition: form-data; name="requestForm" { "subscriptionName":"sampleRequest", "subscriptionDescription":"Sample", "fields":{ "field_ff8080814b15cb4b014b1a70cdef0132":true, "field_ff8080814b15cb4b014b1a70cdef0133":4, "field_ff8080814b15cb4b014b1a70cdef0138":true, "field_ff8080814b15cb4b014b1a70cdef012c":4096 }, "action":"MODIFY_SUBSCRIPTION" } --Abcdefgh--</pre>
--	---

Download document attached to a CSA service

Documents are attached to Service offering before publishing an offer or to an order request before ordering a subscription. An active subscription will have reference links to these attachments which can be used to download the document.

Subscription details call will fetch the URL to download documents attached to an offering.

To download document use the following REST URL:

HTTP method	GET
Content type	application/octet-stream
REST API	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-subscription/<subscriptionid>/attachment/<documentid>/file/<filename>
REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-subscription/9028525b4a7aa888014a7ae4d1ad0063/attachment/9028525b4a7aa888014a7aed9cac013a /file/offering.txt

In order to fetch documents attached to subscription request, get the request ID and catalog ID from the ["Subscription details" on page 43](#) call.

To fetch attachments URL, use request details call.

HTTP method	GET
-------------	-----

REST API	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-request/<requestId>?catalog=<catalogId>
REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-request/402894a34a2e77ae014a2eec8a430020?catalogId=90d9650a36988e5d0136988f03ab000f

Sample response

HTTP method	GET
Content type	application/octet-stream
Accept	application/json
REST API	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-request/<requestid>/attachment/<attachmentid>/file/<filename>
REST URL	https://<CSAFQDN>:<port>/csa/api/mpp/mpp-request/402894a34a2e77ae014a2eec8a430020/attachment/402894a34a2e77ae014a2eec8d140064/file/ sam.xml

Service request payloads in CSA 4.x

To issue an order request to CSA, send a service request payload along with order request. Let us look at necessary parameters in the payload request that makes a service request. If your service design contains subscriber options (customer options) then these options are bundled under fields { } structure into the service request.

Sample payload without optionModel

```
{ "action":"ORDER", "categoryName":"REPLACE_ME_SERVICE_CATEGORY",
  "subscriptionName":"REPLACE_ME_SUBSCRIPTIONNAME", "startDate":"REPLACE_ME_ISO_DATE", "endDate":" REPLACE_ME_ISO_DATE", "fields":{ } }
```

For example: { "action":"ORDER", "categoryName":"APPLICATION_SERVERS", "subscriptionName":"sampleRequest", "startDate":"2014-12-03T05:04:49.000Z", "endDate":"2015-12-03T05:04:49.000Z", "fields":{ } }

Sample payload with optionModel

```
{ ""categoryName":"REPLACE_ME_SERVICE_CATEGORY", "subscriptionName":"REPLACE_ME_SUBSCRIPTIONNAME", "startDate":"REPLACE_ME_ISO_DATE", "endDate":" REPLACE_ME_ISO_
```

```
DATE", "fields":{ "REPLACE_ME_OPTION_FIELD_ID":REPLACE_ME_VALUE_TRUE_OR_FALSE,  
"REPLACE_ME_OPTION_PROPERTY_FIELD_ID":REPLACE_ME_PROPERTY_VALUE }, "action":"ORDER"  
}
```

For example: { "categoryName":"APPLICATION_SERVICES",
"subscriptionName":"sampleRequest", "startDate":"2015-01-24T05:32:17.000Z", "endDate":"2016-01-23T05:32:17.000Z", "fields":{ "field_9028525b4a7aa888014a7ae4d1bc006a":true, "field_9028525b4a7aa888014a7ae4d1bc006e":2, "field_9028525b4a7aa888014a7ae4d1cc0071":true, "field_9028525b4a7aa888014a7ae4d1cc0074":2048}, "action":"ORDER" }

Legacy APIs

These APIs use a REST interface. For information on REST interface, see http://en.wikipedia.org/wiki/Representational_state_transfer. This documentation assumes that you have prior knowledge of REST interfaces.

The base URL for a CSA REST API is `https://<host:port>/csa/rest`, which is appended with the specific URI for the API call. For example, to access the <example> API, use the URL:
`https://<host:port>/csa/rest/<example>`.

Because XML content passed into or returned by a REST API calls can be lengthy, example XML content presented in this document are abbreviated to include just the more pertinent XML content.

An authorization header must be included in all API requests.

Note: Special or localized characters used in the URL of REST API calls must be encoded before they are sent to the server.

Tip: You should only include one value for a Boolean property and the value must be either true or false.

Artifact API

Use this API to view, create, and modify artifacts.

This REST API is supported only for sequenced designs and not for topology designs.

Base URL

`https://<host>:<port>/csa/rest`

URIs

The following URIs are appended to the base URL:

Artifact

URI	Method	Parameters	Description
/artifact	POST	userIdentifier	"Create an artifact" on page 54
/artifact/<artifact_id>	GET	userIdentifier, scope, detail, view	"View an artifact" on page 55
/artifact/<artifact_id>	PUT	userIdentifier, scope, view	"Update an artifact" on page 58
/artifact/<artifact_id>	DELETE	userIdentifier	"Delete an artifact" on page 60
/artifact/fastview/<artifact_id>	GET	userIdentifier, view	"Retrieve a predefined view for an artifact" on page 61
/artifact/<artifact_id>/resolveProperties	GET	userIdentifier, propertyName	"Retrieve resolved properties for an artifact" on page 63

Group

URI	Method	Parameters	Description
/artifact/<organization_id>/group	GET	userIdentifier	"List active groups associated with an organization" on page 65
/artifact/<organization_id>/group	POST	userIdentifier	"Add groups to an organization" on page 66
/artifact/<organization_id>/group/<group_id>	PUT	userIdentifier	"Update group display name, distinguished name" on page 68
/artifact/<organization_id>/group/<group_id>	DELETE	userIdentifier	"Delete or disassociate group from an organization" on page 70

Resource Provider

URI	Method	Parameters	Description
/artifact	GET	userIdentifier, artifactType	"List resource providers" on page 71

Service Offering

URI	Method	Parameters	Description
/artifact/<service_offering_id>/document	POST	userIdentifier	"Add document to service offering" on page 72
/artifact/<service_offering_id>/document	DELETE	userIdentifier	"Delete document from service offering" on page 74
/artifact/<service_offering_id>/document/<document_id>	POST	userIdentifier	"Update document in service offering" on page 75
/artifact/<catalog_id>/publish	POST	userIdentifier	"Publish service offerings to catalog" on page 75
/artifact/<catalog_id>/unpublish	POST	userIdentifier	"Unpublish service offerings from catalog" on page 78

Note: You can view information about an artifact with GET /artifact/<artifact_id> or GET /artifact/fastview/<artifact_id>. The [fastview API](#) can traverse associations, while the standard artifact API only returns information for the artifact.

Artifact types

You can work with the following artifact types using the /artifact API. You can use them with the methods marked in the table.

Artifact type	GET	POST	PUT	DELETE
Approval process	X			
Approval template	X			
Approver	X			

Artifact type	GET	POST	PUT	DELETE
Catalog	X	X	X	X
Group	X			
Named approver approval template	X			
Organization	X	X	X	X
Person	X			
Resource binding	X		X	
Resource environment	X			
Resource offering	X	X	X	
Resource pool	X	X	X	X
Resource provider	X	X	X	X
Resource subscription	X		X	
Service component	X	X	X	X
Service blueprint	X	X	X	X
Service instance	X		X	
Service offering	X	X	X	X
Service request	X			
Subscription	X			

Create an artifact

Details

URI	/artifact
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.

URI	/artifact
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

View an artifact

Details

URI	/artifact/<artifact_id>
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base baseplusone subtree view] Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the object and its first level children are returned. If value is <i>subtree</i>, then the object and all of its descendants are returned. If the value is <i>vie</i>, then the view parameter is required. detail=[required basic standard template full] Optional; default is <i>full</i>. See "Values for the detail parameter" on page 193 Note: Some API calls do not support all possible values for this parameter. detail=FULL, even as the default value, is not accepted for organization artifacts because the volume of content returned can be excessively large. Specify detail=BASIC to avoid an exception message. view=<view_type> Required when value for scope is <i>view</i>; if this parameter is defined, then the value for scope is processed as if its value was <i>view</i>. The default is <i>basicinfo</i>. See "Artifact views" on page 81 for a list of view types. restrict=[true false]

URI	/artifact/<artifact_id>
	Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. For more information, see "Values for the restrict parameter" on page 194
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Examples

Use the following URL:

https://<host>:<port>/csa/rest/artifact/90e72e4f3b00a69e013b0bf7ed55002e?userIdentifier=<user_id>

The following XML was returned in the response:

```

Update an artifact

Details

URI	/artifact/<artifact_id>
Method	PUT
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. view=<view_type>&scope=view Optional; Used to update artifacts based on pre-defined views. See "Artifact views" on page 81 (description column) for a list of view types that support update operation. <_artifact_property>_action_=merge Optional; use the <i>merge</i> option with the <i>action</i> meta tag query parameter to update only a portion of the artifact. The <i>action</i> meta tag can either be specified globally for the artifact by including parameter _action_=merge, or for a specific property e.g., _property_values_action_=merge.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Note: To completely update the artifact, i.e., replace the persistent artifact, do not use the *view* or *merge* parameters and include all artifact content in the request body. Note that if only a portion of the artifact content is sent in the request body, any unspecified content will be removed from the artifact.

To update a portion of the artifact:

- Use a pre-defined view that contains a subset of the artifact properties; only that subset of properties will be updated per the values specified in the request body. See ["Artifact views" on page 81](#) for a list of view types.
- Use the *merge* option as described under Parameters.
You can use the *merge* option with the *view* parameter to update only the view properties for which you specify values in the request body.

Note: Collection specific behavior

When a *merge* option is specified on a collection, for example `_property_values_action_` `=merge`, all collection items specified in the PUT request body are updated. Any other collection items are left untouched.

For the *property* attribute of an artifact, the items of this collection attribute are matched by name.

For all other attributes, the collection items are matched by ID.

Examples

The following examples demonstrate how to update an artifact.

This example shows how to change the finalize flag of a component using the view parameter.

The following URL was sent:

```
https://<host>:<port>/csa/rest/artifact/90e72e4f3af5c989013afb471ebc0264?userIdentifier=&scope=view&view=componentfinalize
```

The following XML was sent in the request body:

```
<ServiceComponent>
  <id>90e72e4f3af5c989013afb471ebc0264</id>
  <toFinalize>false</toFinalize>
</ServiceComponent>
```

This example shows changing the display name of a resource provider. This example does not use the view parameters. To use this approach, retrieve the artifact using GET artifact API, modify the necessary value (in this example - `displayName`), and use that as the body of the PUT request to update the artifact.

The following URL was sent:

```
https://<host>:<port>/csa/rest/artifact/90e72e4f3b00a69e013b0c049ab00033?userIdentifier=<user_id>
```

The following XML was sent in the request body:

```
<ResourceProvider>
  <id>90e72e4f3b00a69e013b0c049ab00033</id>
  <objectId>90e72e4f3b00a69e013b0c049ab00033</objectId>

```

Delete an artifact

Details

URI	/artifact/<artifact_id>
Method	DELETE
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Deletion is subject to a set of business rules which depend on the type of artifact. The business rules for artifacts are explained in the table below. Note that consumption artifacts are not removed from the database when they are deleted; instead, the artifact is marked as retired. See ["Catalog API" on page 88](#) for retiring consumption artifacts.

Artifact type	Details
Resource provider	Can only be deleted if no active service subscriptions use the resource provider.
Service design	Can be deleted when all associated service offerings or service instances are retired.

Retrieve a predefined view for an artifact

The API returns content in a different format when retrieving a single result, hence it is recommended to use ["View an artifact" on page 55](#) API. You may use the following API for performance intensive applications:

Details

URI	/artifact/fastview/<artifact_id>
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. view=<view_type> Required; see "Artifact views" on page 81 for a list of view types. obfuscate Optional; returns the password in obfuscated format. The obfuscate parameter can be used only when the artifact view is set to accesspoint (view=accesspoint.)
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Examples

The following URL is sent. Note that artifact_id is the ID of any artifact that has an accesspoint.

https://<host>:port/csa/rest/artifact/fastview/90e72e4f3abe4bf4013ac24735730010?userIdentifier=<user_id>&view=accesspoint

The following XML is returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<resultView>
  <resultMap>
    <entry>
      <key>accessPoint.uri</key>
      <value xsi:type="xs:string">http://amz:443</value>
    </entry>
    <entry>
      <key>accessPoint.password</key>
      <value xsi:type="xs:string">amz</value>
    </entry>
    <entry>
      <key>accessPoint.username</key>
      <value xsi:type="xs:string">amz</value>
    </entry>
    <entry>
      <key>accessPoint.category.name</key>
      <value xsi:type="xs:string">URL</value>
    </entry>
  </resultMap>
</resultView>
```

Filtering

You can filter the results by providing a value for a property in the URI. The query is then filtered based on that property. You can use the properties listed in ["Artifact views" on page 81](#).

Note: The property name that is specified in the URL must have the period (.) character replaced with the underscore (_) character.

The following example shows the result when the previous example is filtered on a property name.

The following URL is sent:

https://<host>:<port>/csa/rest/artifact/fastview/90e72e4f3b00a69e013b0c049ab0003?userIdentifier=<user_id>&view=propertyinfo&property_name=propBLN

The following XML is returned in response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<resultView><resultMap>
  <entry>
    <key>property.values.value</key>
    <value xsi:type="xs:string">>true</value>
```

```
</entry>
<entry>
  <key>property.consumerVisible</key>
  <value xsi:type="xs:boolean">true</value>
</entry>
<entry>
  <key>property.displayName</key>
  <value xsi:type="xs:string">Boolean property</value>
</entry>
<entry>
  <key>property.valueType.name</key>
  <value xsi:type="xs:string">BOOLEAN</value>
</entry>
<entry>
  <key>property.name</key>
  <value xsi:type="xs:string">propBLN</value>
</entry>
</resultMap></resultView>
```

Retrieve resolved properties for an artifact

A property can have a property mapping configured that indicates its value to be retrieved from a property of another artifact. The REST API provides a mechanism to retrieve the value from the source property. As part of this retrieval, relevant tokens configured on properties are also resolved.

There are two approaches to retrieving resolved properties:

- Retrieve all properties
- Retrieve a single named property

Details

URI	/artifact/<artifact_id>/resolveProperties
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. propertyName=<property_name> Optional; the name of the property you want to retrieve. Only retrieves the value for the property specified.
Returns	200 - Ok

URI	/artifact/<artifact_id>/resolveProperties
	401 - Not authorized 404 - Not found 500 - Server exception

Examples

The following URL was used to retrieve all properties for an artifact:

`https://<host>:<port>/csa/rest/artifact/<id>/resolveProperties?userIdentifier=<user_id>`

The following XML was returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Properties>
  <property> ... </property>
  <property> ... </property>
  <property>
    <id>90d9651a3684c7f0013684cafda80005</id>

</property><property> ... </property>
</Properties>

```

The following URL was used to retrieve a single property:

```

https://<host>:<port>/csa/rest/artifact/<id>/resolveProperties?
userIdentifier=<user_id>&propertyName=PARENT_SVC_COMPONENT_ID

```

The following XML was returned in the response:

```

<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Properties>
    <property>
        <id>90d9651a3684c7f0013684cafda80005</id>
        <name>PARENT_SVC_COMPONENT_ID</name>
        ...
    </property>
</Properties>

```

List active groups associated with an organization

Details

URI	/artifact/<organization_id>/group
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. For steps to get the UserIdentifier value, see "Get userIdentifier" on page 129 .
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/artifact/8a81818f3d02fb7e013d0308891d0003/group?userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<GroupList>
  <count>1</count>
  <limit>1</limit>
  <group>
    <id>8a81818f3d02fb7e013d030af854000f</id>
    <isCriticalSystemObject>false</isCriticalSystemObject>
    <name>sc_February 22, 2013 5:54:43 PM UTC</name>
    <displayName>ServiceConsumer1</displayName>
    <state>...</state>
    <artifactType>...</artifactType>
    <disabled>false</disabled>
    <distinguishedName>
      cn=ServiceConsumer,ou=ConsumerGroup,ou=CSAGroups
    </distinguishedName>
    <role>
      ...
    </role>
  </group>
</GroupList>
```

Add groups to an organization

Details

URI	/artifact/<organization_id>/group
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. For steps to get the UserIdentifier value see "Get userIdentifier" on page 129 .
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

You must specify the role for each group in the request body. The valid roles are as follows:

For Consumer type organizations:

- SERVICE_CONSUMER
- CONSUMER_ORGANIZATION_ADMINISTRATOR

For Provider type organizations:

- CONSUMER_SERVICE_ADMINISTRATOR
- CONTENT_MANAGER
- CSA_ADMIN
- RESOURCE_SUPPLY_MANAGER
- SERVICE_BUSINESS_MANAGER
- SERVICE_DESIGNER
- SERVICE_OPERATIONS_MANAGER

Example

The following URL is sent:

`https://<host>:<port>/csa/rest/artifact/8a81818f3d1421e7013d1423635a0003/group?userIdentifier=90d96588360da0c701360da0f1d5f483`

The following XML is sent:

```
<GroupList>
  <group>
    <displayName>My-Group-Name</displayName>
    <distinguishedName>
      cn=TestConsumer,ou=ConsumerGroup,ou=CSAGroups
    </distinguishedName>
    <role>
      <name>SERVICE_CONSUMER</name>
    </role>
  </group>
  <group>
    <displayName>Another-Group-Name</displayName>
    <distinguishedName>
      cn=TestConsumer2,ou=ConsumerGroup,ou=CSAGroups
    </distinguishedName>
    <role>
      <name>SERVICE_CONSUMER</name>
    </role>
  </group>
</GroupList>
```

The following XML is returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<GroupList>
  <count>2</count>
  <limit>2</limit>
  <group>
    <isCriticalSystemObject>false</isCriticalSystemObject>
    <name>My-Group-Name</name>
    <displayName>My-Group-Name</displayName>
    <disabled>false</disabled>
    <distinguishedName>
      cn=TestConsumer,ou=ConsumerGroup,ou=CSAGroups
    </distinguishedName>
    <role>
      <isCriticalSystemObject>false</isCriticalSystemObject>
      <name>SERVICE_CONSUMER</name>
      <disabled>false</disabled>
    </role>
  </group>
  <group>
    <isCriticalSystemObject>false</isCriticalSystemObject>
    <name>Another-Group-Name</name>
    <displayName>Another-Group-Name</displayName>
    <disabled>false</disabled>
    <distinguishedName>
      cn=TestConsumer2,ou=ConsumerGroup,ou=CSAGroups
    </distinguishedName>
    <role>
      <isCriticalSystemObject>false</isCriticalSystemObject>
      <name>SERVICE_CONSUMER</name>
      <disabled>false</disabled>
    </role>
  </group>
</GroupList>
```

Update group display name, distinguished name

Use this /artifact URI to update the group display name and/or distinguished name for the specified organization.

Details

URI	/artifact/<organization_id>/group/<group_id>
Method	PUT
Parameters	userIdentifier=<user_id>

URI	/artifact/<organization_id>/group/<group_id>
	Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/artifact/8a81818f3d02fb7e013d0308891d0003group/8a81818f3d1437e2013d1795d41107ea?userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following XML was sent:

```
<GroupList>
  <group>
    <displayName>My-New-Group-Name</displayName>
    <distinguishedName>
      cn=TestConsumer,ou=ConsumerGroup,ou=CSAGroups
    </distinguishedName>
  </group>
</GroupList>
```

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Group>
  <id>8a81818f3d1437e2013d1795d41107ea</id>

</Group>
```

Delete or disassociate group from an organization

Use this URI to delete a group or to disassociate it from an organization. If no organization is associated with this group, the group will be deleted. Otherwise, the group will be disassociated from the specified organization.

Details

URI	/artifact/<organization_id>/group/<group_id>
Method	DELETE
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/artifact/8a81818f3d1421e7013d1423635a0003/group/8a81818f3d1437e2013d1795d41107ea?userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following XML was returned:

```
<messageList>
  <messages>Removed role association for My-New-Group-Name</messages>
</messageList>
```

List resource providers

Details

URI	/artifact
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. artifactType=RESOURCE_PROVIDER Required; the only valid value is RESOURCE_PROVIDER. Basic view information is provided in the return content. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. See "Values for the restrict parameter" on page 194 for more information.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent: `https://<host>:<port>/csa/rest/artifact?userIdentifier=90d96588360da0c701360da0f1d5f483&artifactType=RESOURCE_PROVIDER`

The following XML was returned in the response:

```
<ResourceProviderList>
  <count>3</count>
  <limit>0</limit>
  <resourceProvider>
    <id>90e72e583d4c6e77013d4c96b1ab0010</id>
    <objectId>90e72e583d4c6e77013d4c96b1ab0010</objectId>
    <isCriticalSystemObject>false</isCriticalSystemObject>
    <description>Sitescope A</description>
    <name>Sitescope_A_March 9, 2013 12:39:36 AM UTC</name>
```

```
<displayName>Sitescope A</displayName>  
<disabled>false</disabled>

```

Add document to service offering

Details

URI	/artifact/<service_offering_id>/document
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See " Get userIdentifier " on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent with headers:

- Content-type: multipart/form-data
- Content-Disposition: form-data; name="file"
- Content-Type: application/octet-stream

```
https://<host>:<port>/csa/rest/artifact/90cef5de3c63429f013c68b8cdda0bad/document?u  
serIdentifier=90cef5de3c63429f013c642c7fc708ab
```

To better demonstrate how to use this REST API URI, see the sample python script that attaches a text file to a service offering. The script is created based on HTML documentation and you can find more information on HTML form at: <http://www.w3.org/TR/html401/interact/forms.html#h-17.13.4.2>.

""" Sample python script that attaches a text file in the current directory to an ACTIVE CSA service offering on a local host, with default credentials.

Script usage:

```
<scrip-name.py> <service offering uuid> <filename> <admin uuid>
```

The following example attaches file doc.txt to the service offering with id

```
90cec0773c83a11a013c871e4c1a0503 using an admin user ID
```

```
90d96588360da0c701360da0f1d5f483
```

```
post-doc.py 90cec0773c83a11a013c871e4c1a0503 doc.txt
```

```
90d96588360da0c701360da0f1d5f483
Tested with: ActivePython 3.2.2.3
"""

Delete document from service offering

Details

URI	/artifact/<service_offering_id>/document/<document_id>
Method	DELETE
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/artifact/90cef5de3c63429f013c68b8cdda0bad/document/90cef5de3c63429f013c68b8cdda0bad?userIdentifier=90cef5de3c63429f013c642c7fc708ab
```

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Document>
  <id>90cef5de3c63429f013c68d4146a0bce</id>
  <isCriticalSystemObject> false </isCriticalSystemObject>
  <name>Example Offering Doc.txt</name>
  <state>
    ...
  </state>
  <artifactType>
    ...
  </artifactType>
  <disabled>false</disabled>
  <url>/csa//document/download?id=90cef5de3c63429f013c68d4146a0bce</url>

</Document>
```

```
</documentType>  
</Document>
```

Update document in service offering

Details

URI	/artifact/<service_offering_id>/document/<document_id>
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent with headers:

- Content-type: multipart/form-data
- Content-Disposition: form-data; name="file"
- Content-Type: application/octet-stream

https://<host>:<port>/csa/rest/artifact/90cec0123ae20db2013ae2111e3e000a/document/90cec0123afffe57013afffec64f0001?userIdentifier=90d96588360da0c701360da0f1d5f483

See ["Add document to service offering" on page 72](#) for a more detailed example.

Publish service offerings to catalog

Details

URI	/artifact/<catalog_id>/publish
Method	POST
Parameters	userIdentifier=<user_id>

URI	/artifact/<catalog_id>/publish
	Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/artifact/90e72e323b5330cc013b5358c0940021/publish?userIdentifier=90d96588360da0c701360da0f1d5f483

Retrieve artifact state and status

Details

URI	/artifact/state/<artifact_id>
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Request Body	None
Return Body	ArtifactStateInfo
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

For all artifacts, possible values for the returned artifactState are:

- ACTIVE
- RETIRED

The following state and status information will be returned for specific artifact types.

For service instance artifacts, state will be returned and will contain one of the following values:

- ACTIVE
- CANCELLED
- CANCELLING
- CANCEL_FAILED
- DEPLOYING
- EXPIRE_FAILED
- EXPIRING
- FAILED
- MODIFYING
- MODIFY_FAILED
- IN_PROGRESS
- PUBLIC_ACTION_FAILED
- RESERVED
- UPGRADING
- UPGRADE_FAILED

For service request artifacts:

- State will be returned and will contain one of the following values:
 - APPROVED
 - CANCELLED
 - COMPLETED
 - IN_PROGRESS
 - PENDING_APPROVAL
 - REJECTED
 - SUBMITTED
- Status will be returned. If no value was set a null value will be returned. Otherwise it will contain one of the following values:
 - FAILURE
 - SUCCESS

For service subscription artifacts, status will be returned and will contain one of the following values:

- ACTIVE
- CANCELLED

- EXPIRED
- PAUSED
- PENDING
- TERMINATED

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/artifact/state/90e72e323ad23bd6013ad23f63da0016?userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following JSON was returned in the response body:

```
{
  "id": "90e72e323fe4c9ae013fe4def98a0125",
  "artifactType": "SERVICE_INSTANCE",
  "artifactState": "ACTIVE",
  "state": "FAILED",
  "status": null
}
```

Artifact views

Artifact views provide a convenient way to perform retrieve or update actions. When views are used with artifact GET and fastview GET requests, the response includes only the relevant information depending on the type of view requested. When used with PUT requests, the body of the request can include just relevant information, compared to typical PUT requests.

Advantages of Views

- With GET requests, views retrieve only the relevant data for the artifact and avoid loading all the data for the artifact. This leads to better performance.
- With PUT requests, the burden is not on the user to know all the artifact details to update the artifact. The user can pass only the necessary information.
- An example of using views is presented in ["Update an artifact" on page 58](#) (using componentfinalize view).

Note: If you are updating with artifact views, you need to specify all the view's properties.

The following predefined views are available:

View name	Properties	Description
accesspoint	<code>accessPoint.username</code> <code>accessPoint.password</code> <code>accessPoint.uri</code> <code>accessPoint.category.name</code>	This retrieves information from the access point object. Any entity that has the <code>accessPoint</code> property should work with this view.
actioninfo	<code>action.actionState.name</code> <code>action.actionStatus</code> <code>action.errorOnTimeout</code> <code>action.failOnError</code> <code>action.timeout</code> <code>action.processDefinition.name</code> <code>action.consumerVisible</code> <code>action.stateConstraint.lifecycleState.name</code> <code>action.stateConstraint.lifecycleSubstate.name</code>	Retrieves the properties for the action object in addition to all the <code>basicinfo</code> and <code>propertyinfo</code> properties. Note: If the intention is to update an existing action, then <code>action.id</code> must be specified.
artifactinfo	<code>state.name</code> <code>artifactType.name</code> <code>disabled</code> <code>ownedBy.name</code>	Retrieves the required properties from an artifact object in

View name	Properties	Description
		addition to all the basicinfo properties.
basicinfo	id name displayName description iconUrl detailedDescription isCriticalSystemObject	Retrieves information from any Identity object. All artifacts and some additional entities (e.g., accessPoint) are identity objects.
candidatepools*	resourceBinding.candidateProvider .candidatePool.id .candidatePool.objectId .candidatePool.isCriticalSystemObject .candidatePool.name .candidatePool.displayName .candidatePool.disabled .candidatePool.useProviderEnv	Use this view to retrieve candidate resource provider pools for a given resource binding.
candidateproviders*	resourceBinding.candidateProvider .resourceProvider.id .resourceProvider.objectId .resourceProvider.isCriticalSystemObject .resourceProvider.name .resourceProvider.displayName .resourceProvider.disabled	Use this view to retrieve candidate resource providers for a given resource binding.
componentchild	componentChild.name componentChild.displayName componentChild.description componentChild.iconUrl componentChild.detailedDescription componentChild.isCriticalSystemObject	Use this view to add/update service components from the parent service component.

View name	Properties	Description
	componentChild.ownedBy.name componentChild.state.name componentChild.artifactType.name componentChild.disabled componentChild.serviceInstance.id componentChild.componentType.name componentChild.lifecycleProperties.lifecycleState.name componentChild.lifecycleProperties.lifecycleSubstate.name componentChild.id	
componentfinalize	toFinalize	Use this view to change the finalize flag for a component.
componentlifecycle	lifecycleProperties.lifecycleState.name lifecycleProperties.lifecycleSubstate.name	Use this view to change the lifecycle state and substate for a component.
componentroot	componentRoot.name componentRoot.displayName componentRoot.description componentRoot.iconUrl componentRoot.detailedDescription componentRoot.isCriticalSystemObject componentRoot.ownedBy.name componentRoot.state.name componentRoot.artifactType.name componentRoot.disabled componentRoot.serviceInstance.id componentRoot.componentType.name componentRoot.lifecycleProperties.lifecycleState.name componentRoot.lifecycleProperties.lifecycleSubstate.name	Use this view to add a root service component to a ServiceBlueprint or a ServiceInstance object.

View name	Properties	Description
	componentRoot.id	
disabledesign	ServiceBlueprint.disabled	Use this view to enable or disable a ServiceBlueprint.
propertyinfo	property.name property.values.value property.valueType.name property.consumerVisible property.displayName	Retrieves a list of all the properties. Used for creating new properties.
propertyvalue	property.name property.values.value property.consumerVisible property.displayName	This view is useful if the need is only to update a property value.
resourcebindinginfo	resourceBinding.isCriticalSystemObject resourceBinding.state.name resourceBinding.artifactType.name resourceBinding.disabled resourceBinding.bindingState.name resourceBinding.resourceOffering.name resourceBinding.lifeCycleProperties.lifecycleState.name resourceBinding.lifeCycleProperties.lifecycleSubstate.name resourceBinding.resourceProvider.name	Use this view to create/update a Resource Binding.
validproviders*	resourceBinding.id resourceBinding.validProvider.resourceBinding.id resourceBinding.validProvider.resourceProvider.id	Use this view to retrieve or to update valid resource providers for a given resource binding.

View name	Properties	Description
validproviderspools*	resourceBinding.id resourceBinding.validProvider.resourceBinding.id resourceBinding.validProvider.resourceProvider.id resourceBinding.validProvider.validPool.id	Use this view to update valid resource providers and valid resource provider pools for a given resource binding.

* For the candidatepools, candidateproviders, validproviders and validproviderpools artifact views, while the provider selection is in progress the list of providers will be returned. Once a provider is selected no list will be returned.

Available values API

Use this API to retrieve the list of available values for a dynamic property.

Base URL

https://<host>:<port>/csa/rest

Details

URI	/availablevalues/<property_id> <i>property_id</i> is an option model property, and is part of service design, offering and subscription artifacts.
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Request Body	Ampersand (&) separated name=value pairs, where the value on the left side of the equal sign (=) represents the parameter name configured for a dynamic property, and the value on the right side is the value the user selected from the parent property. For example, a request body might contain: <i>first=parent1value&countparam=mycount</i> .

URI	<code>/availablevalues/<property_id></code> <i>property_id</i> is an option model property, and is part of service design, offering and subscription artifacts.
Returns	200 - Ok 400 - Not authorized 404 - Not found 500 - Server exception

Example use context

From the subscriber portal, select a property from the drop down list. The value for any associated dynamic property is populated spontaneously.

Example

The following URL will be sent:

```
https://<host>:<port>/csa/rest/availablevalues/90e763a43ddc18e5013ddc2f134c0088  
?userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following will be sent in the request body:

```
first=parent1Value
```

The following response was returned:

```
<Property>  
  <id>90e763a43ddc18e5013ddc2f134c0088</id>  
  <name>child1</name>  
  <displayName>child1</displayName>  
  <dynamicValueEnabled>true</dynamicValueEnabled>  
  <dynamicScriptName>sample_jsp.jsp</dynamicScriptName>  
  <dynamicScriptParameters>  
    first=[CLIENT:parent1]  
  </dynamicScriptParameters>  
  <availableValues>  
    <value>value1</value>  
    <displayName>value1 displayName</displayName>  
    <description>value1 description</description>  
  </availableValues>  
  ...  
</Property>
```

Catalog API

Use this API to get information related to catalogs.

Base URL

`https://<host>:<port>/csa/rest`

URIs

The URIs in the following tables are appended to the base URL.

Catalog

A catalog is the collection of services available to a consumer.

URI	Method	Parameters	Description
/catalog	GET	userIdentifier, scope, detail	"List catalogs" on page 91
/catalog/<catalog_id>	GET	userIdentifier, scope, detail	"Get catalog details" on page 93

Category

Categories allow you to classify service offerings in a service catalog.

URI	Method	Parameters	Description
/catalog/<catalog_id>/category	POST	userIdentifier	"Create catalog categories" on page 95
/catalog/<catalog_id>/category/<category_id>	PUT	userIdentifier	"Update catalog categories" on page 97
/catalog/<catalog_id>/category/<category_id>	DELETE	userIdentifier	"Delete catalog category" on page 98

Offering

An offering allows you to define service designs that are published to a service catalog.

URI	Method	Parameters	Description
/catalog/<catalog_id>/offering	GET	userIdentifier, scope, detail, hasApproval	"List offerings in the catalog" on page 99
/catalog/<catalog_id>/offering/<offering_id>	GET	userIdentifier, scope, detail	"Get offering details " on page 101

Request

A request is created whenever a user initiates, changes, or deletes a subscription.

URI	Method	Parameters	Description
/catalog/<catalog_id>/request	GET	userIdentifier, scope, detail, submitter	"List requests in the catalog" on page 201
/catalog/<catalog_id>/request	POST	userIdentifier	"Submit a request" on page 103
/catalog/<catalog_id>/request/<request_id>	GET	userIdentifier, scope, detail	"Get request details" on page 105
/catalog/<catalog_id>/request/<request_id>/cancel	GET	userIdentifier	"Cancel a request" on page 108
/catalog/<catalog_id>/request/<request_id>	DELETE	userIdentifier	"Retire a request" on page 108

Approval

An approval is created when the approval manager approves a request.

URI	Method	Parameters	Description
/catalog/<catalog_id>/approval	GET	userIdentifier, scope, detail, approver, returnRetired	"List approvals in the catalog" on page 199
/catalog/<catalog_id>/approval/<approval_id>	GET	userIdentifier, scope, detail	"Get approval details" on page 109
/catalog/<catalog_id>	PUT	userIdentifier	"Update approval decision using

URI	Method	Parameters	Description
id>/approval/<approval_ id>			an external approval system" on page 110
/catalog/<catalog_ id>/approval/<approval_ id>	DELETE	userIdentifier	"Retire an approval" on page 118
/catalog/<catalog_ id>/approval/<approval_ id>/approver	PUT	userIdentifier	"Update approval decision using CSA approval process" on page 111

Approval policy

URI	Method	Parameters	Description
/catalog/<catalog_id>/policy/<policy_ id>/setCatalogApprovalPolicy	POST	userIdentifier	"Update catalog approval policies" on page 112
/catalog/<catalog_id>/policy/<policy_ id>/setSOApprovalPolicy	POST	userIdentifier	"Update service offerings approval policy" on page 114

Subscription

A subscription is created when a consumer requests a service offering and includes all of the options selected by the consumer when the subscription was initiated.

URI	Method	Parameters	Description
/catalog/<catalog_ id>/subscription	GET	userIdentifier, scope, detail, requestor	"List subscriptions in the catalog" on page 203
/catalog/<catalog_ id>/subscription/<subscription_ id>	GET	userIdentifier, scope, detail	"Get subscription details" on page 115

Resource Subscription

URI	Method	Parameters	Description
/catalog/<catalog_ id>	GET	userIdentifier,	"Get resource subscription

URI	Method	Parameters	Description
id>/resourceSubscription		scope, detail	details" on page 119

Instance

An instance is created when a request is approved and includes details about the requested services such as the status of services, IP addresses, etc.

URI	Method	Parameters	Description
catalog/<catalog_id>/instance	GET	userIdentifier, scope, detail, requestor	"List instances in the catalog" on page 200
catalog/<catalog_id>/instance/<instance_id>	GET	userIdentifier, scope, detail	"Get instance details" on page 117

List catalogs

Details

URI	/catalog
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base baseplusone subtree] Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the object and its first level children are returned. If value is <i>subtree</i>, then the object and all of its descendants are returned. detail=[required basic standard template full] Optional; default is <i>basic</i>. See "Values for the detail parameter" on page 193. Some API calls do not support all possible values for this parameter. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the

URI	/catalog
	REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. For more information, see "Values for the restrict parameter" on page 194
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Examples

Use the following URL:

https://<host>:<port>/csa/rest/catalog
?userIdentifier=90d9652b35f46a930135f35b327e00a0&scope=base&detail=basic

Get catalog details

Details

URI	/catalog/<catalog_id> Use "List catalogs" on page 91 to get the catalog ID.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.

URI	/catalog/<catalog_id> Use "List catalogs" on page 91 to get the catalog ID.
	scope=[base baseplusone subtree] Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the object and its first level children are returned. If value is <i>subtree</i>, then the object and all of its descendants are returned. detail=[required basic standard template full] Optional; default is <i>full</i>. See "Values for the detail parameter" on page 193. Some API calls do not support all possible values for this parameter. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. For more information, see "Values for the restrict parameter" on page 194
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

Use the following URL:

https://<host>:<port>/csa/rest/catalog/402895e566cb32ss0136cb831752000f?
?userIdentifier=90d9652b35f46a930135f35b327e00a0&scope=base&detail=required

The following XML was returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Catalog>
  <id>402895e345cb67dd0136ss331752000f</id>

```

Create catalog categories

Details

URI	/catalog/<catalog_id>/category
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found

URI	/catalog/<catalog_id>/category
	500 - Server exception

In the request body:

- Any category specified in the request body that already exists will be left unchanged.
- displayName is required.
- imageUrl and description are optional, and will be set to null if not specified.

Example

The following URL was sent to create an approval policy with two named approvers:

`https://<host>:<port>/csa/rest/catalog/90e72e323c88421f013c8d7fad120076/category?userIdentifier=90d96588360da0c701360da0f1d5f483`

The following XML was sent in the request:

```
<Catalog>
  <catalogCategory>
    <displayName>Example first Catalog Category</displayName>
    <imageUrl>/catalog/category/x.png</imageUrl>
    <description>description for catalog category</description>
  </catalogCategory>
  <catalogCategory>
    <displayName>Example second category</displayName>
  </catalogCategory>
</Catalog>
```

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Catalog>
  <id>8a81818f3d02fb7e013d0308894a0004</id>
  <isCriticalSystemObject>false</isCriticalSystemObject>
  <description>Default catalog for the organization.</description>
  <imageUrl>
    /csa/images/library/briefcase-consumer_default_img-60.png
  </imageUrl>
  <name>Catalog_QA_ORG</name>
  <displayName>QA Org Catalog</displayName>
  ...
  <catalogCategory> ... </catalogCategory>
  ...
  <catalogCategory>
    <id>8a81818f3d128500013d1341a5d3000e</id>
    <isCriticalSystemObject>false</isCriticalSystemObject>
    <name>EXAMPLE_SECOND_CATEGORY</name>
```

```
    <displayName>Example second category</displayName>
    <disabled>false</disabled>
  </catalogCategory>
</catalogCategory> ... </catalogCategory>
...
<catalogCategory>
  <id>8a81818f3d128500013d1341a5c6000d</id>
  <isCriticalSystemObject>false</isCriticalSystemObject>
  <description>description for catalog category</description>
  <iconUrl>/catalog/category/x.png</iconUrl>
  <name>EXAMPLE_FIRST_CATALOG_CATEGORY</name>
  <displayName>Example first Catalog Category</displayName>
  <disabled>false</disabled>
</catalogCategory>
</catalogCategory> ... </catalogCategory>
...
</Catalog>
```

Update catalog categories

Details

URI	/catalog/<catalog_id>/category/<category_id>
Method	PUT
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok (Indicates the REST call executed without error. See XML return content for details on categories updated.) 401 - Not authorized 404 - Object not found 500 - Server exception

Note that any CatalogCategory elements not specified in the request body will be left unchanged.

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/catalog/8a81818f3d02fb7e013d0308894a0004/
category/8a81818f3d128500013d1341a5c6000d
?userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following XML was sent in the request:

```
<CatalogCategory>
  <displayName>Changing first example category name</displayName>
  <iconUrl>/catalog/category/x.png</iconUrl>
  <description>New description for first example category</description>
</CatalogCategory>
```

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Catalog>
  <id>8a81818f3d02fb7e013d0308894a0004</id>
  <isCriticalSystemObject>false</isCriticalSystemObject>
  <description>Default catalog for the organization.</description>
  <iconUrl>
    /csa/images/library/briefcase-consumer_default_img-60.png
  </iconUrl>
  <name>Catalog_QA_ORG</name>
  <displayName>QA Org Catalog</displayName>
  ...
  <catalogCategory> ... </catalogCategory>
  ...
  <catalogCategory>
    <id>8a81818f3d128500013d1341a5c6000d</id>
    <isCriticalSystemObject>false</isCriticalSystemObject>
    <description>description for catalog category</description>
    <iconUrl>/catalog/category/x.png</iconUrl>
    <name>CHANGING_FIRST_EXAMPLE_CATEGORY_NAME</name>
    <displayName>Changing first example category name</displayName>
    <disabled>false</disabled>
  </catalogCategory>
  ...
</Catalog>
```

Delete catalog category

Details

URI	/catalog/<catalog_id>/category/<category_id>
Method	DELETE
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.

URI	/catalog/<catalog_id>/category/<category_id>
Returns	200 - Ok (Indicates the REST call executed without error. See XML return content for details on category deleted.) 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/catalog/8a81818f3d02fb7e013d0308894a0004/  
category/8a81818f3d128500013d1341a5c6000d  
?userIdentifier=90d96588360da0c701360da0f1d5f483
```

The XML return content is basic catalog information as returned with the POST and PUT methods and most notably, will not include the category just deleted.

List offerings in the catalog

Details

URI	/catalog/<catalog_id>/offering Use "List catalogs" on page 91 to get the catalog ID.
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the <code>userIdentifier</code> value. <code>scope=[base view]</code> Optional; default is <i>base</i> . <code>detail=basic</code> Optional; The only valid value is <i>basic</i> . <code>hasApproval=[true false]</code>

URI	/catalog/<catalog_id>/offering Use "List catalogs" on page 91 to get the catalog ID.
	Optional; default is <i>false</i>. If <i>true</i>, then hasApproval attribute is returned. If <i>false</i>, then the attribute is not returned. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. For more information, see "Values for the restrict parameter" on page 194
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

The following URL was sent to get a list of offerings in a catalog using the default values for scope (base) and detail (basic):

```
https://<host>:<port>/csa/rest/catalog/402895e33732af18013732b6f435006boffering?use
rIdentifier=90d9652b67ss6a930135f35b327e00a0
```

The following XML was returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<ServiceOfferingList>
  <count>3</count>
  <limit>0</limit>
  <ServiceOffering
    <id>90e763db3dd1a9a4013dd1e16aa16c95</id>

Get offering details

Details

URI	/catalog/<catalog_id>/offering/<offering_id> Use "Catalog API" on page 88 to get the catalog ID and "List offerings in the catalog" on page 99 to get the offering ID.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base baseplusone subtree] Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the object and its first level children are returned. If value is <i>subtree</i>, then the object and all of its descendants are returned. detail=[required basic standard template full] Optional; default is <i>full</i>. See "Values for the detail parameter" on page 193. Some API calls do not support all possible values for this parameter. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed.

URI	/catalog/<catalog_id>/offering/<offering_id> Use "Catalog API" on page 88 to get the catalog ID and "List offerings in the catalog" on page 99 to get the offering ID.
	For more information, see "Values for the restrict parameter" on page 194 excludedoc=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the document field is not included in the REST response. If the value is <i>false</i> then the document field is included in the REST response. See "Values for the excludedoc parameter" on page 194 for more information.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

Use the following URL:

```
https://<host>:<port>/csa/rest/catalog/402895e33732af18013732b6f435006b/
offering/402895e337326d300137327ce1e30074
?userIdentifier=90d9652b67ss6a930135f35b327e00a0
```

The following XML was returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<ServiceOffering>
  <id>402895e337326d300137327ce1e30074</id>

  <createdOn>2012-05-09T10:44:34.147-06:00</createdOn>
  <updatedOn>2012-05-09T11:48:26.170-06:00</updatedOn>
  ...
</ServiceOffering>
```

Submit a request

Details

URI	/catalog/<catalog_id>/request Use "List catalogs" on page 91 to get the catalog ID.
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Note: To submit a request for a subscription that is owned by a group, you must send the group name in the request. You should not use the group DN.

Examples

Use the following URL:

https://<host>:<port>/csa/rest/catalog/90540a9734f502880134f502c82e0011/request?userIdentifier=90d9667ss5f46a930135f35b327e00a0

Cancel a request

Details

URI	<code>/catalog/<catalog_id>/request/<request_id>/cancel</code> Use "Catalog API" on page 88 to get the catalog ID and "List requests in the catalog" on page 201 to get the request ID.
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Retire a request

Details

URI	<code>/catalog/<calalog_id>/request/<request_id></code> Use "Catalog API" on page 88 to get the catalog ID and "List requests in the catalog" on page 201 to get the request ID.
Method	DELETE
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Not found

URI	<code>/catalog/<calalog_id>/request/<request_id></code> Use "Catalog API" on page 88 to get the catalog ID and "List requests in the catalog" on page 201 to get the request ID.
	500 - Server exception

Get approval details

Details

URI	<code>/catalog/<calalog_id>/approval/<approval_id></code> Use "Catalog API" on page 88 to get the catalog ID and "List requests in the catalog" on page 201 to get the approval ID.
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the <code>userIdentifier</code> value. <code>scope=[base baseplusone subtree]</code> Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the object and its first level children are returned. If value is <i>subtree</i>, then the object and all of its descendants are returned. <code>detail=[required basic standard template full]</code> Optional; default is <i>full</i>. See "Values for the detail parameter" on page 193. Some API calls do not support all possible values for this parameter.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Update approval decision using an external approval system

Details

URI	/catalog/<catalog_id>/approval/<approval_id> Use "Catalog API" on page 88 to get the catalog ID and "List approvals in the catalog" on page 199 to get the approval ID.
Method	PUT
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Body	ApprovalProcess instance required in request body.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

The following URL was sent to approve a subscription request:

```
https://<host>:<port>/csa/rest/catalog/90540a9734f502880134f502c82e0011/  
approval/65920b6356n204770943t567ss2r1503  
?userIdentifier=90d9667ss5f46a930135f35b327e00a0
```

The following XML was sent in the request:

```
<ApprovalProcess>  
  <approvalResult>  
    <name>APPROVED</name>  
  </approvalResult>  
</ApprovalProcess>
```

The following URL was sent to reject a subscription request:

```
https://<host>:<port>/csa/rest/catalog/
```

The following XML was sent in the request:

```
<ApprovalProcess>
  <approvalResult>
    <name>REJECTED</name>
  </approvalResult>
  <approvalComment>comment</approvalComment>
</ApprovalProcess>
```

Update approval decision using CSA approval process

Details

URI	/catalog/<catalog_id>/approval/<approval_id>/approver Use "Catalog API" on page 88 to get the catalog ID and "List approvals in the catalog" on page 199 to get the approval ID.
Method	PUT
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Body	ApprovalProcess instance required in request body.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

The following URL was sent to approve a subscription request:

```
https://<host>:<port>/csa/rest/catalog/90540a9734f502880134f502c82e0011/
approval/65920b6356n204770943t567ss2r1503/approver
?userIdentifier=90d9667ss5f46a930135f35b327e00a0
```

The following XML was sent in the request:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Approver>
  <person>
    <userName>approver0@hp.com</userName>
```

```
<organization>
  <name>CONSUMER</name>
</organization>
</person>
<approverResult>
  <name>APPROVED</name>
</approverResult>
</Approver>
```

The following URL was sent to reject a subscription request:

```
https://<host>:<port>/csa/rest/catalog/90540a9734f502880134f502c82e0011/
approval/65920b6356n204770943t567ss2r1503/approver
?userIdentifier=90d9667ss5f46a930135f35b327e00a0
```

The following XML was sent in the request:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Approver>
  <person>
    <userName>approver0@hp.com</userName>
    <organization>
      <name>CONSUMER</name>
    </organization>

  <approverResult>
    <name>REJECTED</name>
  </approverResult>
  <approvalComment>comment</approvalComment>
</Approver>
```

Update catalog approval policies

Use this API to associate an approval policy with the specified catalog.

Details

URI	/catalog/<catalog_id>/policy/<policy_id>/setCatalogApprovalPolicy Use " Catalog API " on page 88 to get the catalog ID. Use " List organization's approval policies " on page 142 to get an organization's approval policy IDs.
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See " Get userIdentifier " on page 129 for the steps required to get the userIdentifier value.

URI	/catalog/<catalog_id>/policy/<policy_id>/setCatalogApprovalPolicy Use " Catalog API " on page 88 to get the catalog ID. Use " List organization's approval policies " on page 142 to get an organization's approval policy IDs.
Response Body	The response body will be an ApprovalPolicyVO of base/full.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Examples

The following URL was sent:

```
https://<host>:<port>/csa/rest/catalog/8a81818f3d4251ed013d46c2b7f602bc/
policy/8a81818f3d4251ed013d4259f57c0008/setCatalogApprovalPolicy?
userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following XML was returned:

```

</ApprovalPolicyList>
```

Update service offerings approval policy

Use this API to update the approval policy for multiple service offerings published in the specified catalog.

Details

URI	<code>/catalog/<calalog_id>/policy/<policy_id>/setCatalogSOApprovalPolicy</code> Use "Catalog API" on page 88 to get the catalog ID. Use "List offerings in the catalog" on page 99 to get a catalog's service offering IDs, and "List organization's approval policies" on page 142 to get all the approval policies for an organization. Traverse through the list to get the approval policy for the service offering.
Method	POST
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Request Body	The request body contains the list of service offering IDs that are to be updated.
Response Body	The response body will be a MessageListVO with success and failure messages.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Examples

The following URL was sent:

```
https://<host>:<port>/csa/rest/catalog/8a81818f3d4251ed013d46c2b7f602bc/  
policy/8a81818f3d4251ed013d46cc8590012c/setCatalogSOApprovalPolicy?  
userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following XML was sent in the request body:

```
<ServiceOfferingList>  
  <ServiceOffering>  
    <id>8a81818f3d4251ed013d427c75e5005d<id>

  </ServiceOffering>  
  <ServiceOffering>  
    <id>12345<id>  
  </ServiceOffering>  
</ServiceOfferingList>
```

The following XML was returned:

```
<messageList>  
  <messages>Updated approval policy of action of ORDER for service offering with id  
8a81818f3d4251ed013d427c75e5005d</messages>  
  <messages>Updated approval policy of action of MODIFY_SUBSCRIPTION for service  
offering with id 8a81818f3d4251ed013d427c75e127c3</messages>  
  <messages>Failed to set approval policy for service offering with id 12345. The  
service offering is not found.</messages>  
</messageList>
```

Get subscription details

Details

URI	/catalog/<catalog_id>/subscription/<subscription_id> Us "Catalog API" on page 88 to get the catalog ID and "List subscriptions in the catalog" on page 203 to get the subscription ID.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should

URI	/catalog/<catalog_id>/subscription/<subscription_id> Us "Catalog API" on page 88 to get the catalog ID and "List subscriptions in the catalog" on page 203 to get the subscription ID.
	be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base baseplusone subtree] Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the object and its first level children are returned. If value is <i>subtree</i>, then the object and all of its descendants are returned. detail=[required basic standard template full] Optional; default is <i>full</i>. See "Values for the detail parameter" on page 193. Some API calls do not support all possible values for this parameter. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. For more information, see "Values for the restrict parameter" on page 194 excludedoc=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the document field is not included in the REST response. If the value is <i>false</i> then the document field is included in the REST repsonse. See "Values for the excludedoc parameter" on page 194 for more information.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

The following URL was

Get instance details

Details

URI	/catalog/<catalog_id>/instance/<instance_id> Use "Catalog API" on page 88 to get the catalog ID and "List instances in the catalog" on page 200 to get the instance ID.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the

	userIdentifier value. scope=[base baseplusone subtree] Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the object and its first level children are returned. If value is <i>subtree</i>, then the object and all of its descendants are returned. detail=[required basic standard template full] Optional; default is <i>full</i>. See "Values for the detail parameter" on page 193. Some API calls do not support all possible values for this parameter. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. For more information, see "Values for the restrict parameter" on page 194
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Retire an approval

Details

URI	/catalog/<catalog_id>/approval/<approval_id>
Method	DELETE
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Not found

URI	/catalog/<catalog_id>/approval/<approval_id>
	500 - Server exception

Caution: The approval is retired regardless of whether it was rejected or approved.

Get resource subscription details

Details

URI	/catalog/<catalog_id>/resourceSubscription/<resource_subscription_id>
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base baseplusone subtree] Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the object and its first level children are returned. If value is <i>subtree</i>, then the object and all of its descendants are returned. detail=[required basic standard template full] Optional; default is <i>full</i>. See "Values for the detail parameter" on page 193. Some API calls do not support all possible values for this parameter.
Returns	200 - Ok 401 - Not authorized 500 - Server exception

Export API

Use this API to export a supported artifact as a content archive. Supported artifacts include resource environments, resource offerings, service designs, service offerings, and catalogs.

Base URL

https://<host>:<port>/csa/rest

Details

URI	/export/<artifact_id>
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Note that the directory the archive will be downloaded to is defined by the REST client or browser in use.

Artifact archives are structured as following.

- Resource environment archive contains:
 - Resource environment XML
 - Manifest XML
- Resource offering archive contains:
 - Resource offering XML
 - Icons used for customizing resource offering
 - Manifest.XML
- Service design archive contains:
 - Service design XML
 - Resource offering XMLs
 - Icons used for customizing resource offerings and service design
 - Dynamic option JSP files
 - Manifest XML
- Service offering archive contains:
 - Service offering XML
 - Service design XML
 - Resource offering XMLs
 - Icons used for customizing service offering, service design, and resource offerings

- Dynamic option JSP files
- Manifest XML
- Catalog archive contains:
 - Catalog XML
 - Service offering XMLs
 - Service design XMLs
 - Resource offering XMLs
 - Resource environment XMLs
 - Icons used for customizing catalog, service offerings, service designs, and resource offerings
 - Dynamic option JSP files
 - Manifest XML
- Component palette archive contains:
 - Component palette XML
 - Service component type XMLs
 - Service component template XMLs
 - Resource offering type XMLs
 - Artifact relationship XMLs
 - Icon used for customizing component palette, service component types and templates
 - Manifest XML

Example

The following URL was sent to export a catalog:

```
https://<host>:<port>/csa/rest/export/8a81818f3d02fb7e013d0308894a0004  
?userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following response headers were returned, and include the name of the downloaded archive zip file, CATALOG_QA_Org_Catalog_8a81818f3d02fb7e013d0308894a0004.zip:

```
Status Code: 200 OK  
Cache-Control: must-revalidate, post-check=0, pre-check=0  
Content-Disposition: attachment;filename="CATALOG_QA_Org_Catalog_  
8a81818f3d02fb7e013d0308894a0004"  
Content-Type: application/zip;charset=UTF-8  
Date: Tue, 26 Feb 2013 00:09:36 GMT  
Expires: 0  
Pragma: public  
Server: Apache-Coyote/1.1  
Transfer-Encoding: chunked  
content-transfer-encoding: binary
```

Import API

Use this API to import artifacts from a content archive. Archives are created via the export REST API, the content archive tool, or the Cloud Service Management Console. The import operation imports the primary artifact and all associated artifacts.

Base URL

https://<host>:<port>/csa/rest

Details

URI	/import
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. previewImport=[true false] Optional; default is false. If true, then the file will only be validated to determine that an import can succeed, without actually performing an import. file=<multipart_representation_of_service_offering_zip_file> Required; type 'Multipart/Form-Data' archive zip to be imported. Note that the directory the file will be imported from is defined by the REST client or browser in use. Typically the file parameter will not include a directory path. update=[true false] Optional; default is false. If true, any existing artifacts of the same type and with the same name will be overwritten; otherwise the artifacts are created. Cannot be used with <i>updatePreserveExisting</i> parameter. updatePreserveExisting=[true false] Optional; default is false. If true, any existing artifacts of the same type with the same name will be preserved (not overwritten) and renamed. Existing references to these artifacts will automatically use the renamed artifacts. New artifacts are created from the archive. Cannot be used with <i>update</i> parameter.

URI	/import
	orgForCatalogImport=<organization_name> Required for import of catalog archive; the name of the organization to be used when creating the imported catalog. associateProviders=[true false] Optional; default is false. If true, resource providers in the archive are bound to existing resource offerings and resource environments of the same provider type and display name in the database. validateType=[COMPONENT_PALETTE CATALOG SERVICE_OFFERING SERVICE_BLUEPRINT SERVICE_DESIGN RESOURCE_OFFERING RESOURCE_ENVIRONMENT] Optional; if specified, content archive is verified to be of the specified type.
Returns	200 - Updated 400 - Bad request 404 - Not found 500 - Server exception

Caution: Component palette import is an update operation, and so *associateProviders* and *updatePreserveExisting* parameters will be ignored.

The following headers must be set when using this API to upload the content archive:

- Content-type: multipart/form-data
- Content-Disposition: form-data; name="file"
- Content-Type: application/octet-stream

Example

The following URL was sent to import the contents of the specified archive.

https://<host>:<port>/csa/rest/import?userIdentifier=90d96588360da0c701360da0f1d5f483&update=true&file=SERVICE_OFFERING_SO_ONE_90cec2ff3c81b896013c81b8c1780097.zip

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<ImportOperationResult>
  <additionalSummaryMessages>
    Service offering SO ONE imported successfully.
    (Id=90cec2ff3dc1d73b013dc1df0b750028)
  </additionalSummaryMessages>
  <additionalSummaryMessages>
    Service design SD ONE imported successfully.
```

```
(Id=90cec2ff3dc1d73b013dc1df09db0018)
</additionalSummaryMessages>
<importResultRecord>ea933ec5-ad7b-42b6-b47c-965ff76f7693</importResultRecord>
<importStatus>SUCCESS</importStatus>
<importSummary>Import of Service offering archive successful.</importSummary>
</ImportOperationResult>
```

Import_result API

Use this API to view detailed result information from importing a content archive. See ["Import API" on page 122](#) for details on importing a content archive.

Base URL

https://<host>:<port>/csa/rest

Details

URI	/import_result/<importResultRecord_id> importResultRecord IDs are returned by the "Import API" on page 122
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. format=HTML Optional; returns results as HTML rather than the default XML
Returns	200 - Ok 400 - Bad request 404 - Not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/import_result/ea933ec5-ad7b-42b6-b47c-965ff76f7693
?userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following XML was returned:

```
<ImportResult>
  <importResultLogEntry>
    <limit>0</limit>
    <artifactDescription>SO ONE</artifactDescription>
    <artifactDisplayName>SO ONE</artifactDisplayName>
    <artifactName>

Lifecycle engine API

Use this API to work with lifecycle actions. Base URL.

This REST API is supported only for sequenced designs and not for topology designs.

Base URL

https://<host>:<port>/csa/rest

URIs

The following URIs are appended to the base URL:

URI	Method	Parameters	Description
/lifecycleengine	GET	userIdentifier,	"Get latest lifecycle execution record"

URI	Method	Parameters	Description
		serviceInstanceId	for a service instance" on page 127
/lifecycleengine/<lifecycle_action_id>	GET	userIdentifier	"Get details for a lifecycle execution record" below
/lifecycleengine/execute	POST	userIdentifier	"Schedule lifecycle transition for service instance" on page 128

Get details for a lifecycle execution record

Details

URI	/lifecycleengine/<lifecycle_action_id>
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

Use the following URL:

```
https://<host>:<port>/csa/rest/lifecycleengine/90d96588360da0c701360da0f25400c2?userIdentifier=90s96588670da0c701360da0f1d540a1
```

The following XML was returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<LifecycleExecutionRecord>
  <callbackPending>false</callbackPending>
  <executionState>
    <id>90d96588360da0c701360da0f25400c2</id>

      <extensible>false</extensible>
    </categoryType>
  </targetState>
</LifecycleExecutionRecord>

```

Get latest lifecycle execution record for a service instance

Details

URI	/lifecycleengine
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. serviceInstanceId=<service_instance_id> Required; the ID of the service instance.

URI	/lifecycleengine
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Schedule lifecycle transition for service instance

Details

URI	/lifecycleengine/execute
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on the next page for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

Use the following URL:

https://<host>:<port>/csa/rest/lifecycleengine/execute
?userIdentifier=90s96588670da0c701360da0f1d540a1

The following XML was sent in the request:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<LifecycleExecutionRequest>
  <reverse>false</reverse>
  <serviceComponentId>90d96588372d758101372d75aebb009f</serviceComponentId>
  <serviceInstanceId>90d96588372d758101372d75aeb90087</serviceInstanceId>
  <targetStateName>DEPLOYED</targetStateName>
</LifecycleExecutionRequest>
```

Login API

Use this API to generate the userIdentifier credential for the other Legacy APIs.

Base URL

`https://<host>:<port>/csa/rest`

URIs

The following URIs are appended to the base URL:

URI	Method	Parameters	Description
/login/<organization_name>/<user_name>	GET	none	"Get userIdentifier" below
/login/<organization_name>/userLookup	GET	userName	"Get userIdentifier for user name with slash" on the next page

See ["orgInformation API" on page 154](#) for getting an organization's credentials.

Get userIdentifier

Details

URI	/login/<organization_name>/<user_name>/ Where <organization_name> is the desired organization name and <user_name> is the desired user name in that organization, to generate a user identifier.
Method	GET
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Note: Unlike most API calls, the arguments (organization name and user name) are part of the URL path rather than parameters.

Caution: If the trailing slash is not included, a portion of the user name might be truncated when the user name includes non-alphanumeric characters. The best practice is to always include a trailing slash.

Example

To get the `userIdentifier`, we used the following URL:

`https://<host>:<port>/csa/rest/login/MyOrganization/admin/`

The following XML was returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<person>
  <id>90s96588670da0c701360da0f1d540a1</id> <!-- This is userIdentifier -->
  ... <!-- Remaining XML is not relevant for this example. -->
</person>
```

The value for `userIdentifier` is the first `<id>` value returned in the XML.

Get `userIdentifier` for user name with slash

Details

URI	<code>/login/<organization_name>/userLookup</code>
Method	GET
Parameters	<code>userName=<user_name></code> Required; the user name you want to use as credentials for CSA.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Example

To get the `userIdentifier`, use the following URL:

`https://<host>:<port>/csa/rest/login/MyOrganization/userLookup
?userName=admin/domain`

The following XML is returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<person>
  <id>90s96588670da0c701360da0f1d540a1</id> <!-- This is userIdentifier -->
  ... <!-- Remaining XML is not relevant for this example. -->
</person>
```

The value for `userIdentifier` is the first `<id>` value returned in the XML.

Notification API

Use this API to retrieve the notification objects associated with `<party_id>`, or to send a notification to users or organizations.

Base URL

`https://<host>:<port>/csa/rest`

URIs

The following URIs are appended to the base URL:

URI	Method	Parameters	Description
<code>/notification/party/<party_id></code>	GET	<code>userIdentifier</code> , <code>maxResults</code>	"View list of notification objects" below
<code>/notification/party</code>	POST	<code>userIdentifier</code>	"Send notification" on page 133

View list of notification objects

Details

URI	<code>/notification/party/<party_id></code> where, the party ID is the UUID of a person, organization, or group.
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions on the data to work with. See "Get userIdentifier" on page 129 for the steps required to get the

URI	/notification/party/<party_id> where, the party ID is the UUID of a person, organization, or group.
	userIdentifier value. maxResults=<n> Optional; where n is the number of notification objects to return. Notification objects are ordered by createdOn date with most recent first. By default all notification objects are returned.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

The following URL is sent:

https://<host>:<port>/csa/rest/notification/party/BFA0DB53DA414B90E04059106D1A24B5?
?userIdentifier=BFA0DB53DA414B90E04059106D1A24B5

The following XML will be returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<NotificationList><notification>
  <notifContentBody>Your service subscription for {0} is now active. To view
the details or make modifications, go to the {1} and click the Subscriptions
tab.</notifContentBody>
  <notifSubject>Your subscription is now active</notifSubject>
  <notifactionId>90d957ea3806fa7e01380f95d38d073a</notifactionId>
  <recepientId>BFA0DB53DA414B90E04059106D1A24B5</recepientId>
  <recepientName>consumer</recepientName>
  <senderContextArtifactName>CONSUMER</senderContextArtifactName>
  <senderContextArtifactTypeName>ORGANIZATION</senderContextArtifactTypeName>
  <tokens><tokenSequence>0</tokenSequence><value>my request</value></tokens>
  <tokens><tokenSequence>1</tokenSequence><value>CSA
Consumer</value></tokens>
</notification></NotificationList>
```

Send notification

Details

URI	/notification/party/<party_id>
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions on the data to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Request body format

```
<Notification>
  <subject>Notification Subject goes in here</subject>
  <contentBody>Enter any text here, optionally including tokens: token0 = {0}.
Token1 = {1}</contentBody>
  <artifactContextId>UUID of the subscription</artifactContextId>
  <!-- Each recipient must have an id and type. Only PERSON and ORGANIZATION are
valid types. Notifications will be sent to valid recipients and an error message
returned for the invalid ones. Response code 200 OK will be returned if there is at
least one valid recipient.
-->
  <recipient>
    <id>UUID of the recipient</id>
    <type>PERSON</type>
  </recipient>
  <recipient>
    <id>UUID of organization</id>
    <type>ORGANIZATION</type>
  </recipient>
  <!-- tokens must be specified if your contentBody contains tokens. No token
validation is done.
-->
  <tokens>
    <tokenSequence>0</tokenSequence>
```

```
        <value>Token 0 content</value>
    </tokens>
</tokens>
    <tokenSequence>1</tokenSequence>
    <value>Token 1 content</value>
</tokens>
</Notification>
```

Examples

The following URL was sent:

```
https://<host>:<port>/csa/rest/notification/party?userIdentifier=90cec3a03a93ef8901
3a93f07b880001
```

The following XML was sent in the request (note that the second recipient.id is bad):

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Notification>
  <subject>Test Subject</subject>
  <contentBody>Test content body, token0 = {0}. Token1 = {1}</contentBody>
  <recipient>
    <id>90cec3a03a93ef89013a93f07b880001</id>
    <type>PERSON</type>
  </recipient>
  <recipient>
    <id>bad org id</id>
    <type>ORGANIZATION</type>
  </recipient>
  <tokens>
    <tokenSequence>0</tokenSequence>
    <value>Token 0 test content</value>
  </tokens>
  <tokens>
    <tokenSequence>1</tokenSequence>
    <value>Token 1 test content</value>
  </tokens>
</Notification>
```

The following response header status code was returned: 200 OK

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<NotificationPostResponse>
  <count>1</count>
  <errorMessage>Please enter a valid value for the recipient user id = bad org
id</errorMessage>

```

Organization API

Use this API to view organizations.

Base URL

https://<host>:<port>/csa/rest

URIs

The following URIs are appended to the base URL:

URI	Method	Parameters	Description
/organization	GET	userIdentifier, scope, detail	"View a list of organizations" below Note: The user identified by userIdentifier must have admin access.
/organization/<organization_id>	GET	userIdentifier, scope, detail	"View an organization" on page 139
/organization/<organization_id>/approvalPolicy	GET	userIdentifier	"List organization's approval policies" on page 142
/organization/<organization_id>/approvalPolicy	POST	userIdentifier	"Create approval policy" on page 144
/organization/<organization_id>/approvalPolicy/<policy_id>	PUT	userIdentifier	"Update approval policy" on page 148
/organization/<organization_id>/approvalPolicy/<policy_id>	DELETE	userIdentifer	"Delete approval policy" on page 151
/organization/accessPoint	GET	userIdentifier, orgName	"Retrieve organization LDAP access point information" on page 150
/organization/offering	PUT	userIdentifier, queryType, newReleases	"List most requested, recently requested, or new offerings" on page 152

View a list of organizations

Details

URI	/organization/
Method	GET
Parameters	userIdentifier=<user_id>

URI	/organization/
	Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. Note: The user identified by userIdentifier must have admin access. scope=base Optional; the only valid value is <i>base</i>. detail=basic Optional; The only valid value is <i>basic</i>. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. For more information, see "Values for the restrict parameter" on page 194
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Example

The following URL is sent:

```
https://localhost:8444/csa/rest/organization/
?userIdentifier=90d96588360da0c701360da0f1d5f483&scope=base&detail=basic
```

The following XML is returned:

View an organization

Details

URI	/organization/<organization_id> To get the organization ID see "View a list of organizations" on page 136.
Method	GET
Parameters	userIdentifier=<user_id>

URI	/organization/<organization_id> To get the organization ID see "View a list of organizations" on page 136.
	Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base baseplusone] Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the base plus the first level children are returned. Note that <i>subtree</i> is not a valid value for this API call. detail=[required basic] Optional; default is <i>basic</i>. See "Values for the detail parameter" on page 193. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. For more information, see "Values for the restrict parameter" on page 194
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Example

The following URL is sent:

```
https://localhost:8444/csa/rest/organization/8a8181853810699a0138106dcdd00003/
?userIdentifier=8a8181853810699a01381076be5400a0
```

The following XML is returned:

List organization's approval policies

Details

URI	/organization/<organization_id>/approvalPolicy
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok

URI	/organization/<organization_id>/approvalPolicy
	401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL is sent:

https://<host>:<port>/csa/rest/organization/8a81818f3d1421e7013d1423635a0003/
approvalPolicy?userIdentifier=90d96588360da0c701360da0f1d5f483

The following XML is returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>

Create approval policy

Details

URI	/organization/<organization_id>/approvalPolicy
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

The types of approval policies supported are: NamedApproverApprovalTemplate, NamedGroupApprovalTemplate, UserContextApprovalTemplate, and DelegatedApprovalTemplate.

In NamedApproverApprovalTemplate request body:

- displayName is required.
- approver is optional.
- If there are no approver(s), the default value is 0. if there are approver(s), the default will be 1 and the value cannot exceed the number of approvers.
- automaticApproval is optional. The default value is false. If it is true, the following are the valid values:
 - automaticPeriodDuration (in days) is optional. The default value is 0 and the valid values range from 0 to 365
 - automaticApprovalDecision is required; valid value is APPROVED or REJECTED.

Example request body:

```
<NamedApproverApprovalTemplate>
  <displayName>Name Ex Template 03</displayName>
  <approver><userName>consumer</userName></approver>
  ...
  <approver><userName>consumer04</userName></approver>
  <minApprovalRequired>1</minApprovalRequired>
  <automaticApproval>true</automaticApproval>
  <automaticPeriodDuration>12</automaticPeriodDuration>
  <automaticApprovalDecision>
    <name>REJECTED</name>
  </automaticApprovalDecision>
</NamedApproverApprovalTemplate>
```

In NamedGroupApprovalTemplate request body:

- displayName is required.
- group's distinguishedName is required.
- minApprovalRequired is optional and defaults value is 1. Value cannot be greater than the number of users in the group.
- automaticApproval is optional. The default value is false. If it is true, the following are the valid values:
 - automaticPeriodDuration (in days) is optional. The default value is 0 and the valid values range from 0 to 365
 - automaticApprovalDecision is required; valid value is APPROVED, or REJECTED.

Example request body:

```
<NamedGroupApprovalTemplate>
  <displayName>Name Group Template 01</displayName>
  <group>
    <distinguishedName>
      cn=ServiceConsumer,ou=ConsumerGroup,ou=CSAGroups
    </distinguishedName>
  </group>
  <minApprovalRequired>0</minApprovalRequired>
  <automaticApproval>true</automaticApproval>
  <automaticApprovalDecision><automaticApprovalDecision>
    <name>REJECTED</name>
  </automaticApprovalDecision>
</NamedGroupApprovalTemplate>
```

In UserContextApprovalTemplate request body:

- displayName is required.
- minApprovalRequired is optional and defaults value is 1. Value cannot be greater than the number of users in the group.

- automaticApproval is optional. The default value is false. If it is true, the following are the valid values:
 - automaticPeriodDuration (in days) is optional. The default value is 0 and the valid values range from 0 to 365
 - automaticApprovalDecision is required; valid value is APPROVED, or REJECTED.

Example request body:

```
<UserContextApprovalTemplate>
  <displayName>User ContextTemplate 01</displayName>
  <automaticApproval>true</automaticApproval>
  <automaticPeriodDuration>7</automaticPeriodDuration>
  <automaticApprovalDecision>
    <name>APPROVED</name>
  </automaticApprovalDecision>
</UserContextApprovalTemplate>
```

In DelegatedApprovalTemplate request body:

- displayName is required.
- processDefinition is required, ID is needed.
- automaticApproval is optional and defaults value is 1. Value cannot be greater than the number of users in the group.
 - automaticPeriodDuration (in days) is optional. The default value is 0 and the valid values range from 0 to 365
 - automaticApprovalDecision is required; valid value is APPROVED, or REJECTED.

Example request body:

```
<DelegatedApprovalTemplate>
  <displayName>Name Ex Template 03</displayName>
  <processDefinition>
    <id>90d96507362a000a01362a0048bc00ad</id>
  </processDefinition>
  <automaticApproval>true</automaticApproval>
  <automaticPeriodDuration>30</automaticPeriodDuration>
  <automaticApprovalDecision>
    <name>REJECTED</name>
  </automaticApprovalDecision>
</DelegatedApprovalTemplate>
```

Example

The following URL will be sent to create an approval policy with two named approvers:

https://<host>:<port>/csa/rest/organization/8a81818f3d1421e7013d1423635a0003/
approvalPolicy?userIdentifier=90d96588360da0c701360da0f1d5f483

The following XML will be sent in the request:

```
<NamedApproverApprovalTemplate>
  <displayName>My-New-Approval-Template</displayName>
  <approver><userName>ProjectManager</userName></approver>
  <approver><userName>BudgetManager</userName></approver>
  <minApprovalRequired>2</minApprovalRequired>
  <automaticApproval>true</automaticApproval>
  <automaticPeriodDuration>14</automaticPeriodDuration>
  <automaticApprovalDecision>
    <name>APPROVED</name>
  </automaticApprovalDecision>
</NamedApproverApprovalTemplate>
```

The following XML will be returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>

Update approval policy

Details

URI	/organization/<organization_id>/approvalPolicy/<policy_id>
Method	PUT
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See " Get userIdentifier " on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/organization/8a81818f3d1421e7013d1423635a0003/
approvalPolicy/8a81818f3d1437e2013d17f249c30a0c?
userIdentifier=90d96588360da0c701360da0f1d5f483
```

The following XML was sent in the request. It will change the list of approvers to user ProjectManager, set automaticApproval to false, and set automaticApprovalDecision to REJECTED.

```
<NamedApproverApprovalTemplate>
  <displayName>Updated-My-Approval-Template</displayName>
  <approver><userName>ProjectManager</userName></approver>
  <minApprovalRequired>0</minApprovalRequired>
  <automaticApproval>false</automaticApproval>
  <automaticPeriodDuration>0</automaticPeriodDuration>
  <automaticApprovalDecision>
    <name>REJECTED</name>
  </automaticApprovalDecision>
</NamedApproverApprovalTemplate>
```

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>

Retrieve organization LDAP access point information

Details

URI	/organization/accessPoint
Method	GET
	orgName=<organization_name> Required; the name of the organization for which the LDAP access point information is to be retrieved. userIdentifier=<user_id> Required; the user ID that you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Parameters	The user identified by userIdentifier must have admin access.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/organization/accessPoint?orgName=ACCOUNTING
```

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<AccessPointInfo>
  <password>JfyPejrtsQc0J4bKDPmznlg==</password>
  <searchSubtree>>false</searchSubtree>
  <uri>ldap://localhost:389/dc=csa,dc=org</uri>
  <userSearchBase>
    ou=eConsumerUsers,ou=EnterpriseUsers
  </userSearchBase>
  <userSearchFilter>uid={0}</userSearchFilter>
  <username>cn=admin,dc=csa,dc=org</username>
</AccessPointInfo>
```

Delete approval policy

Details

URI	/organization/<organization_id>/approvalPolicy/<policy_id>
Method	DELETE
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Object not found 500 - Server exception

Example

The following URL was

```
sent:https://<host>:<port>/csa/rest/organization/8a81818f3d1421e7013d1423635a0003/

List most requested, recently requested, or new offerings

Details

URI	/organization/offering Organization is determined by userIdentifier.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID that you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. queryType=[mostRequested recentlyRequested newReleases] Optional; the ten most requested, most recently requested, or newly released offerings in all catalogs for the organization are returned.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/organization/offering?userIdentifier=90e763db3ed8fe91013ed90155e600b0&queryType=mostRequested

orgInformation API

Use this API to get an organization's credentials.

Base URL

https://<host>:<port>/csa/rest

Details

URI	/orgInformation/<organization name>
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID that you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. The user identified by userIdentifier must have admin access.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Example

The following URL was sent:

https://<host>:<port>/csa/rest/orgInformation/my_organization

The following XML was returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Organization>
  <isCriticalSystemObject>false</isCriticalSystemObject>
  <description>My Organization</description>
  <name>my_organization</name>
  <disabled>false</disabled>
</Organization>
```

Processinstances API

The Processinstances API is used to return execution results from OO flows. When OO makes one of these REST calls, the process instance properties are updated accordingly. When the process completes, the process notification handler passes these properties to the caller.

This REST API is supported only for sequenced designs and not for topology designs.

Base URL

`https://<host>:<port>/csa/rest`

URIs

The following URIs are appended to the base URL:

URI	Method	Parameters	Description
/processinstances/<process_instance_id>	GET	userIdentifier=<user_id> Required; the user ID that you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. The user identified by userIdentifier must have admin access.	"Retrieve a process instance" on page 157
/processinstances	POST	userIdentifier	"Create a process instance" on page 158
/processinstances/<process_instance_id>	PUT	userIdentifier, scope, view, action	"Update a process instance" on page 160
/processinstances/<process_instance_id>/execute	POST	userIdentifier	"Execute a process instance" on page 163

Process instance structure

XML structure

An abbreviated version of the XML for a process instance is provided below. Only properties that are relevant for APIs are shown; the XML returned by an API call will usually include much more than what is shown here.

```
<ProcessInstance>>
  <property>
    <isCriticalSystemObject></isCriticalSystemObject>
    <name></name>
    <paramRoleType>
      <isCriticalSystemObject></isCriticalSystemObject>
      <name></name>
      <disabled></disabled>
    </paramRoleType>
    <scope>
      <isCriticalSystemObject></isCriticalSystemObject>
      <name></name> </scope>
    <valueType>
      <isCriticalSystemObject></isCriticalSystemObject>
      <name></name>
      <disabled></disabled>
    </valueType>
    <values>
      <value></value>
    </values>
    <maxOccurs></maxOccurs>
    <minOccurs></minOccurs>
    <orderIndex></orderIndex>
    <confidential></confidential>
    <encrypted></encrypted>
    <readOnly></readOnly>
  </property>
  <processDefinition>
    <id></id>
    <name></name>
  </processDefinition>
  <processInstanceState>
    <isCriticalSystemObject></isCriticalSystemObject>
    <name></name>
    <disabled></disabled>
  </processInstanceState>
  <context></context>
</ProcessInstance>
```

Retrieve a process instance

Details

URI	/processinstances/<process_instance_id> Where <process_instance_id> is the process instance ID.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID that you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. The user identified by userIdentifier must have admin access.
Response Body	ProcessInstance VO
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

The following was sent to retrieve a process instance:

https://<host>:<port>/csa/rest/processinstances/90d9652b3752ad4f013752ae38cb0065

The following XML was sent in the response:

```
<ProcessInstance>>
  <property>
    <isCriticalSystemObject>>false</isCriticalSystemObject>
    <name>Unit Test Process Instance Property</name>
    <paramRoleType>
      <isCriticalSystemObject>>false</isCriticalSystemObject>
      <name>INPUT</name>
      <disabled>>false</disabled>
    </paramRoleType>
    <valueType>
      <isCriticalSystemObject>>false</isCriticalSystemObject>
      <name>INPUT</name>
      <disabled>>false</disabled>
    </valueType>
  </values>
```

```

    <value>Unit Test Process Instance Property Value</value>
  </values>
  <maxOccurs>0</maxOccurs>
  <minOccurs>0</minOccurs>
  <orderIndex>0</orderIndex>
  <confidential>false</confidential>
  <encrypted>false</encrypted>
  <readOnly>false</readOnly>
</property>
<processDefinition>
  <id>90d9652b35f41cbc0135f41cf1310004</id>
  <name>Unit Test Process Definition 1</name>
</processDefinition>
<processInstanceState>
  <isCriticalSystemObject>false</isCriticalSystemObject>
  <name>INITIALIZED</name>
  <disabled>false</disabled>
</processInstanceState>
<context>Context for Unit Test Process Instance</context>
<artifactId>ID of the artifact executing the action</artifactId>
<timeout>3600</timeout>
<errorOnTimeout>false</errorOnTimeout>
</ProcessInstance>

```

Create a process instance

Details

URI	/processinstances
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Request Body	ProcessInstance VO
Response Body	ProcessInstance VO
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

The following must be provide in the request body:

- Process definition ID.
- Context string. Includes contextual information that is relevant for the caller after the process instance has been created.
- Artifact ID.
- Properties. The properties provided here will be merged with the process definition properties.

Two implicit tokens (reserved flow input variable names) are provided to process instances executed through the OO execution engine.

- CSA_PROCESS_ID - will be provided the value of the UUID of the process instance.
- CSA_CONTEXT_ID - will be provided the value of the Artifact ID. This is the artifact for which this process instance executes.

The following was sent to create a process instance:

```
https://<host>:<port>/csa/rest/processinstances/?userIdentifier=90d9652b35f35a930135f35b327e00a0
```

The following XML was sent in the request:

```
<ProcessInstance>>
  <property>
    <isCriticalSystemObject>>false</isCriticalSystemObject>
    <name>Unit Test Process Instance Property</name>
    <paramRoleType>
      <isCriticalSystemObject>>false</isCriticalSystemObject>
      <name>INPUT</name>
      <disabled>>false</disabled>
    </paramRoleType>
    <valueType>
      <isCriticalSystemObject>>false</isCriticalSystemObject>
      <name>STRING</name>
      <disabled>>false</disabled>
    </valueType>
    <values>
      <value>Unit Test Process Instance Property Value</value>
    </values>
    <maxOccurs>0</maxOccurs>
    <minOccurs>0</minOccurs>
    <orderIndex>0</orderIndex>
    <confidential>>false</confidential>
    <encrypted>>false</encrypted>
    <readOnly>>false</readOnly>
  </property>
  <processDefinition>
    <id>90d9652b35f41cbc0135f41cf1310004</id>
    <name>Unit Test Process Definition 1</name>
  </processDefinition>
```

```
<processInstanceState>
  <isCriticalSystemObject>false</isCriticalSystemObject>
  <name>INITIALIZED</name>
  <disabled>false</disabled>
</processInstanceState>
<context>Context for Unit Test Process Instance</context>
<artifactId>ID of the artifact executing the action</artifactId>
<timeout>3600</timeout>
<errorOnTimeout>false</errorOnTimeout>
</ProcessInstance>
```

Update a process instance

Details

URI	/processinstances/<process_instance_id> Where <process_instance_id> is the process instance ID.
Method	PUT
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. view=<view_type>&scope=view Optional; used to update process instance based on pre-defined views. Possible values for <i>view_type</i> are propertyinfo and processinstancestate. With processinstancestate, the process instance state, return code and status can be changed. <property_>action<_>=merge Optional; use the <i>merge</i> option with the <i>action</i> meta tag query parameter to update only a portion of the process instance. The following the use cases are allowed: • With view=propertyinfo, specifying property_action_=merge will merge the properties specified in the request body with the existing process instance properties. • With view=processinstancestate, specifying action=merge will merge the state information specified in the request body with the existing process instance state.
Request Body	ProcessInstance VO

URI	/processinstances/<process_instance_id> Where <process_instance_id> is the process instance ID.
Response Body	Updated ProcessInstance VO
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Process instance state (processInstanceState) values:

- INITIALIZED
- PENDING
- READY
- ACTIVE
- COMPLETED
- ERROR
- CANCELED

Process instance return code (processReturnCode) values:

- SUCCESS
- FAILURE
- RUNNING
- TIMEOUT

The request body sent in the API will be strictly validated for the following:

- Process Instance Id sent has to exist in CSA, otherwise the call will fail with appropriate error message.
- Process Instance state will be validated using the rule that the state cannot be changed to a transitional state while it is already in a terminal state. The terminal states are 'COMPLETED, ERROR, CANCELED'. So if the process instance state is already in any of the above states, this call will fail if it attempts to set the state to a different value than what it is currently. In addition, a process instance which is already in Active state cannot be reset back to Ready state using this call.

Examples

The following was sent to update propertyinfo of a process instance:

`https://<host>:<port>/csa/rest/processinstances/90d9652b362d4ecd01362d4fb7be0f71?userIdentifier=90d9652b362d4ecd01362d4ef51e00a5&view=propertyinfo&scope=view&property_action_=merge`

The following XML was sent in the request to update a property:

```
<ProcessInstance>>
  <id>90d9652b362d4ecd01362d4fb7be0f71</id>
  <property>
    <name>Property Name</name>
    <valueType>
      <name>STRING</name>
    </valueType>
    <values>
      <value>Hello World!</value>
    </values>
  </property>
</ProcessInstance>
```

The following was sent to update the process instance state:

`https://<host>:<port>/csa/rest/processinstances/90d9652b362d4ecd01362d4fb7be0f71?userIdentifier=90d96588360da0c701360da0f1d5f483&scope=view&view=processinstancestate&action=merge`

```
<ProcessInstance>>
  <id>90d9652b3752ad4f013752ae38cb0065</id>
  <processInstanceState>
    <name>COMPLETED</name>
  </processInstanceState>
</ProcessInstance>
```

The following was sent to update the process instance return code:

`https://<host>:<port>/csa/rest/processinstances/90d9652b3752ad4f013752ae38cb0065?userIdentifier=90d96588360da0c701360da0f1d5f483&scope=view&view=processinstancestate&action=merge`

```
<ProcessInstance>>
  <id>90d9652b3752ad4f013752ae38cb0065</id>
  <processReturnCode>
    <name>SUCCESS</name>
  </processReturnCode>
</ProcessInstance>
```

The following was sent to update the process instance state, status and return code:

`https://<host>:<port>/csa/rest/processinstances/90d9652b3752ad4f013752ae38cb0065?userIdentifier=90d96588360da0c701360da0f1d5f483&scope=view&view=processinstancestate&action=merge`

```
<ProcessInstance>>
  <id>90d9652b3752ad4f013752ae38cb0065</id>
  <processInstanceState>
    <name>COMPLETED</name>
  </processInstanceState>
  <processReturnCode>
    <name>SUCCESS</name>
  </processReturnCode>
  <status>The Process Instance has successfully completed.</status>
</ProcessInstance>
```

Execute a process instance

Details

URI	/processinstances/<process_instance_id>/execute
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Response Body	ProcessInstance VO
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

The following was sent to retrieve a process instance:

```
https://<host>:<port>/csa/rest/processinstances/90d9652b362d4ecd01362d4fb7be0f71/execute/?userIdentifier=90d9652b35f35a930135f35b327e00a0
```

Resource Provider API

Use this API to retrieve a list of resource providers that matches the access point URL with the access point URL specified when calling this API.

Base URL

https://<host>:<port>/csa/rest

Details

URI	/resourceProvider
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. accessPointUrl Required; the URL that refers to the access point URL of the resource provider to be searched. Note: The accesspointUrl parameter is case insensitive.
Returns	200 - Updated 400 - Bad request 404 - Not found 401 - Not authorized

Example

The following URL was sent to import the contents of the specified archive.

```
https://<host>:<port>/csa/rest/resourceProvider?userIdentifier=8a8185f448fbf5840148fcddd03d000d&accessPointUrl=http://admin:8082/
```

The following XML was returned:

```
<ResourceProviderList>
<count>0</count>
<limit>0</limit>
<resourceProvider>
<id>8a8185f4497d011b01497d028a210003</id>

Search API

Details

URI	/search
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the <code>userIdentifier</code> value. <code>query=<string></code> Required; returns search results that contain <i>string</i> in their display name or description. <code>type=[all subscription service_offering service_request approval_process]</code> Optional; default is <i>all</i>. The type of objects to search.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

User API

Use this API to get information related to users.

Base URL

`https://<host>:<port>/csa/rest`

URIs

The following URIs are appended to the base URL:

Request

A request is created whenever a user initiates, changes, or deletes a subscription.

URI	Method	Parameters	Description
/user/instance/<instance_id>/request	GET	userIdentifier	"List service requests for subscription" on page 170
/user/myrequest	GET	userIdentifier, scope, detail, submitter, returnRetired, submitStartDate, submitEndDate	"List active requests for user" on page 171
/user/request/count	GET	userIdentifier	"Get count of requests for user" on page 173
/user/multipleRequest/cancel	POST	userIdentifier	"Cancel multiple service requests" on page 174
/user/multipleRequest/delete	POST	userIdentifier	"Delete multiple service requests" on page 175

Approval

An approval is created when the approval manager approves a request.

URI	Method	Parameters	Description
/user/approval/count	GET	userIdentifier	"Get count of approvals for user" on page 178
/user/multipleApprovals/delete	POST	userIdentifier	"Delete multiple approval requests" on page 178
/user/myapproval	GET	userIdentifier, scope, detail,	"List approvals for

URI	Method	Parameters	Description
		returnRetired, approver, creationStartDate, CreationEndDate	approver" on page 177

Subscription

A subscription is created when a consumer requests a service offering and includes all of the options selected by the consumer when the subscription was initiated.

URI	Method	Parameters	Description
/user/mysubscription	GET	userIdentifier, scope, detail, requestor, returnRetired, creationStartDate, creationEndDate, modificationStartDate, modificationEndDate	"List subscriptions for user" on page 180
/user/subscription/count	GET	userIdentifier	"Get count of subscriptions for user" on page 182
/user/subscription	GET	userIdentifier, queryType	"Get list of recent or expiring soon subscriptions for user" on page 183
/user/multipleSubscription/delete	POST	userIdentifier	"Delete multiple subscriptions" on page 188

Instance

An instance is created when a request is approved and includes details about the requested services such as the status of services, IP addresses, etc.

URI	Method	Parameters	Description
/user/myinstance	GET	userIdentifier, scope, detail, requestor, returnRetired, creationStartDate, creationEndDate	"List instances for user" on page 190

List service requests for subscription

Details

URI	/user/instance/<instance_id>/request Returns the list of service requests for the specified subscription. A request's details will include information on any failed action instances.
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Method	GET
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

The following URL was sent:

List active requests for user

Details

URI	/user/myrequest
Method	GET
	userIdentifier=<user_id> Required; this user must be in the same organization as submitter, and must have the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base view] Optional; default is <i>base</i>. detail=basic Optional; The only valid value is <i>basic</i>.
Parameters	sbmitter=<user_name>

URI	/user/myrequest
	Required; user name must be valid, and is the user whose request list will be returned by this call. <i>submitter</i> must be in the same organization as the user specified by <i>userIdentifier</i>. returnRetired=[true false] Optional; default is <i>false</i>. submitStartDate=<yyyy-MM-ddTHH:mm:ss> Optional; requests submitted on or after start date and time will be included in the return. <i>T</i> serves as a separator between data and time. Time will default to 00:00:00 if not specified. Date and time are assumed to be in the time zone of the CSA server. submitEndDate=<yyyy-MM-ddTHH:mm:ss> Optional; requests submitted before end date and time will be included in the return. <i>T</i> serves as a separator between data and time. Time will default to 00:00:00 if not specified. Date and time are assumed to be in the time zone of the CSA server.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

The following URL was sent:

```
https://<host>:<port>/csa/rest/user/myrequest?userIdentifier=8a8181853810699a01381076be5400a0 &submitter=acctgconsumer
```

The following XML was returned in the response:

```

Get count of requests for user

Details

URI	/user/request/count Gets the number of requests for the user associated with userIdentifier. The results are grouped by request state.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Cancel multiple service requests

Details

URI	/user/multipleRequest/cancel
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok (Indicates the REST call executed without error. See XML return content for whether all specified requests were canceled.) 401 - Not authorized 404 - Object not found 500 - Server exception

A request can only be cancelled if its state is PENDING.

Note:

- When a pending subscription modification request is canceled, only the modification is canceled; the subscription is not changed.
- Once a subscription request has been approved, the request can no longer be canceled. The subscription, though, can be canceled.

Example

Use the following URL:

```
https://<host>:<port>/csa/rest/user/multipleRequest/cancel  
?userIdentifier=90d965c0379fd06601379fd192b30ee6
```

The following XML was sent in the request:

```
<ServiceRequestList>  
  <ServiceRequest>  
    <id>90e72e283b05aff1013b0b2c015103a4</id>  
    <catalogItem>  
      <catalog>  
        <id>90d965c0379fd06601379fd1936a0f05</id>  
      </catalog>  
    </catalogItem>  
  </ServiceRequest>
```

```
<ServiceRequest>
  <id>90e72e283b05aff1013b0b2b43fc0356</id>
  <catalogItem>
    <catalog>
      <id>90d965c0379fd06601379fd1936a0f05</id>
    </catalog>
  </catalogItem>
</ServiceRequest>
</ServiceRequestList>
```

The following XML was returned in the response. The count value indicates the number of service requests successfully canceled. A ServiceRequest element is included for each canceled service request

```
<ServiceRequestList>
  <count>2</count>
  <limit>0</limit>
  <ServiceRequest>
    <id>90e72e283b05aff1013b0b2c015103a4</id>
  ...
  </ServiceRequest>
  <ServiceRequest>
    <id>90e72e283b05aff1013b0b2b43fc0356</id>
  ...
  </ServiceRequest>
</ServiceRequestList>
```

Delete multiple service requests

Details

URI	/user/multipleRequest/delete
Method	POST
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok (Indicates the REST call executed without error. See XML return content for whether all specified requests were deleted.) 401 - Not authorized 404 - Object not found 500 - Server exception

A request can only be deleted if its state is APPROVED, DENIED, or CANCELED.

Example

Use the following URL:

https://<host>:<port>/csa/rest/user/multipleRequest/delete
?userIdentifier=90d965c0379fd06601379fd192b30ee6

The following XML was sent in the request:

```
<ServiceRequestList>
  <ServiceRequest>
    <id>90e72e283b05aff1013b0b2c015103a4</id>
    <catalogItem>
      <catalog>
        <id>90d965c0379fd06601379fd1936a0f05</id>
      </catalog>
    </catalogItem>
  </ServiceRequest>
  <ServiceRequest>
    <id>90e72e283b05aff1013b0b2b43fc0356</id>
    <catalogItem>
      <catalog>
        <id>90d965c0379fd06601379fd1936a0f05</id>
      </catalog>
    </catalogItem>
  </ServiceRequest>
</ServiceRequestList>
```

The following XML was returned in the response. The count value indicates the number of service requests successfully deleted. A ServiceRequest element is included for each deleted service request.

```
<ServiceRequestList>
  <count>2</count>
  <limit>0</limit>
  <ServiceRequest>
    <id>90e72e283b05aff1013b0b2c015103a4</id>
    ...
  </ServiceRequest>
  <ServiceRequest>
    <id>90e72e283b05aff1013b0b2b43fc0356</id>
    ...
  </ServiceRequest>
</ServiceRequestList>
```

List approvals for approver

Details

URI	/user/myapproval
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the <code>userIdentifier</code> value. <code>scope=[base view]</code> Optional; default is <i>base</i>. <code>detail=basic</code> Optional; The only valid value is <i>basic</i>. <code>returnRetired=[true false]</code> Optional; default is <i>false</i>. <code>approver=<user_name></code> Required; user name must be valid, and is the user whose approval list will be returned by this call. <i>approver</i> must be in the same organization as the user specified by <i>userIdentifier</i>. <code>creationStartDate=<yyyy-MM-ddTHH:mm:ss></code> Optional; approval requests created on or after start date and time will be included in the return. <i>T</i> serves as a separator between data and time. Time will default to 00:00:00 if not specified. Date and time are assumed to be in the time zone of the CSA server. <code>creationEndDate=<yyyy-MM-ddTHH:mm:ss></code> Optional; approval requests created before end date and time will be included in the return. <i>T</i> serves as a separator between data and time. Time will default to 00:00:00 if not specified. Date and time are assumed to be in the time zone of the CSA server. Caution: The users specified by <code>userIdentifier</code> and <code>approver</code> must be in the same organization.

Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception
----------------	---

Get count of approvals for user

Details

URI	/user/approval/count Gets the number of approvals for the user associated with <code>userIdentifier</code> . The results are grouped by approval result state.
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get <code>userIdentifier</code>" on page 129 for the steps required to get the <code>userIdentifier</code> value.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Delete multiple approval requests

Details

URI	/user/multipleApprovals/delete
Method	POST
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. See "Get <code>userIdentifier</code>" on page 129 for the steps required to get the <code>userIdentifier</code> value.
Returns	200 - Ok (Indicates the REST call executed without error. See XML return content for whether all specified approval requests were deleted.)

URI	/user/multipleApprovals/delete
	401 - Not authorized 404 - Object not found 500 - Server exception

An approval request can only be deleted if its state is APPROVED or DENIED.

Example

The following URL was sent:

https://<host>:<port>/csa/rest/user/multipleApprovals/delete
?userIdentifier=90d965c0379fd06601379fd192b30ee6

The following XML was sent in the request:

```
<ApprovalProcessList>
  <approvalProcess>
    <id>90e72e713a94e0ab013aae76618e0e39</id>
    <catalogItem>
      <catalog>
        <id>90d965c0379fd06601379fd1936a0f05</id>
      </catalog>
    </catalogItem>
  </approvalProcess>
  <approvalProcess>
    <id>90e2a4133a75430b013a7a1328560377</id>
    <catalogItem>
      <catalog>
        <id>90d965c0379fd06601379fd1936a0f05</id>
      </catalog>
    </catalogItem>
  </approvalProcess>
</ApprovalProcessList>
```

The following XML was returned in the response. The count value indicates the number of approval requests successfully deleted. An ApprovalProcess element is included for each deleted approval request.

```
<ApprovalProcessList>
  <count>2</count>
  <limit>0</limit>
  <ApprovalProcess>
    <id>90e72e713a94e0ab013aae76618e0e39</id>
    ...
  </ApprovalProcess>
  <ApprovalProcess>
```

```
        <id>90e2a4133a75430b013a7a1328560377</id>
        ...
    </ApprovalProcess>
</ServiceSubscriptionList>
```

List subscriptions for user

Details

URI	/user/mysubscription
Method	GET
	userIdentifier=<user_id> Required; this user must be in the same organization as requestor, and must have the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base view] Optional; default is <i>base</i>. detail=basic Optional; The only valid value is <i>basic</i>. requestor=<user_name> Required; user name must be valid, and is the user whose subscription list will be returned by this call. <i>requestor</i> must be in the same organization as the user specified by <i>userIdentifier</i>. returnRetired=[true false] Optional; default is <i>false</i>. creationStartDate=<yyyy-MM-ddTHH:mm:ss> Optional; subscriptions created on or after start date and time will be included in the return. creationEndDate=<yyyy-MM-ddTHH:mm:ss> Optional; subscriptions created before end date and time will be included in the return. Note that creationStartDate must also be specified. Parameters modificationStartDate=<yyyy-MM-ddTHH:mm:ss>

URI	/user/mysubscription
	Optional; subscriptions updated on or after specified start date and time will be included in the return. modificationEndDate=<yyyy-MM-ddTHH:mm:ss> Optional; subscriptions updated before specified end date and time will be included in the return. Note that modificationStartDate must also be specified. Note that in all date parameters: • T serves as a separator between date and time. • Time will default to 00:00:00 if not specified. • Date and time are assumed to be in the time zone of the CSA server. restrict=[true false] Optional; default is <i>true</i>. If the value is <i>true</i>, then the output fields of the REST response are restricted. By default, the following fields are not displayed: createdBy, updatedBy, createdOn, updatedOn, description, iconUrl, and categoryType. If the value is <i>false</i>, then the output fields are displayed. For more information, see "Values for the restrict parameter" on page 194
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

Get count of subscriptions for user

Details

URI	<code>/user/subscription/count</code> Gets the number of subscriptions for the user associated with <code>userIdentifier</code> . The results are grouped by subscription status.
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the <code>userIdentifier</code> value.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Get list of recent or expiring soon subscriptions for user

Details

URI	<code>/user/subscription</code> Returns a list of subscriptions for the user associated with <code>userIdentifier</code> .
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the <code>userIdentifier</code> value. <code>queryType=[expiringSoon recent]</code> Optional; <i>expiringSoon</i> returns the user's subscriptions that will expire within the next 30 days, and <i>recent</i> returns the last five subscriptions initiated by the user.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Get all components of a specific type for a specific user

Details

URI	<code>/user/mycomponents?userIdentifier=<userId>&componentType=<comma-separated values of a componentType>&componentTypeWildcard=<comma-separated values of type that are treated with wild card>&creationDateBegin=<creationDateBegin>&creationDateEnd=<creationDateEnd>&updatedAtBegin=< updatedAtDateBegin>&updatedAtEnd=< updatedAtDateEnd>&returnActiveOnly=<true false>&GMT=<true/false></code>
Method	GET
Parameters	<code>userIdentifier=<user_id></code> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user with the necessary permissions for the data you want to work with. See

URI	/user/mycomponents?userIdentifier=<userId>&componentType=<comma-separated values of a componentType>&componentTypeWildcard=<comma-separated values of type that are treated with wild card>&creationDateBegin=<creationDateBegin>&creationDateEnd=<creationDateEnd>&updatedAtBegin=< updatedAtBegin>&updatedAtEnd=< updatedAtEnd>&returnActiveOnly=<true false>&GMT=<true/false>
	"Get <i>userIdentifier</i>" on page 129" for the steps required to retrieve the <i>userIdentifier</i> value. componentType=<comma-separated values> Optional; Specify the component name to retrieve. This parameter takes comma-separated values such as SERVER,INFRASTRUCTURE. componentTypeWildcard=<comma-separated values> Optional; use this parameter to specify the component name to retrieve. This parameter takes comma-separated values. The names are appended with wildcard characters and should not be specified. For example, the value Server retrieves all components of type SERVER, SERVER_GROUP, or Server. Using this parameter may affect the performance of the API. You should use the componentType parameter whenever possible. creationDateBegin: <yyyy-MM-ddTHH:mm:ss> Optional; subscriptions created on or after the start date and time are included in the return. creationDateEnd: <yyyy-MM-ddTHH:mm:ss> Optional; subscriptions created before the end date and time are included in the return. Note that the creationStartDate parameter must also be specified. updatedAtBegin: <yyyy-MM-ddTHH:mm:ss> Optional; subscriptions updated on or after the specified start date and time are included in the return. updatedAtEnd: <yyyy-MM-ddTHH:mm:ss> Optional; subscriptions updated before the specified end date and time are included in the return. Note that the modificationStartDate parameter must also be specified. returnActiveOnly: true/false Optional; specifying true for this parameter returns only subscriptions that are not in retired state. GMT : true/false

URI	<code>/user/mycomponents?userIdentifier=<userId>&componentType=<comma-separated values of a componentType>&componentTypeWildcard=<comma-separated values of type that are treated with wild card>&creationDateBegin=<creationDateBegin>&creationDateEnd=<creationDateEnd>&updatedAtBegin=< updatedAtBegin>&updatedAtEnd=< updatedAtEnd>&returnActiveOnly=<true false>&GMT=<true/false></code>
	Optional; specifying true for this parameter configures CSA to interpret date-related parameters in GMT. This is important if the application communicating to CSA is not in the same time zone. Note: In all date parameters, T serves as a separator between date and time and time defaults to 00:00:00:00 if not specified.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Example

The following URL was sent:

```
https://<host>:<port>/csa/rest/user/mycomponents?userIdentifier=90s96588670da0c701360da0f1d540a1&componentType=Server
```

Delete multiple subscriptions

Details

URI	/user/multipleSubscription/delete
Method	POST

URI	/user/multipleSubscription/delete
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok (Indicates the REST call executed without error. See XML return content for whether all specified subscriptions were deleted.) 401 - Not authorized 404 - Object not found 500 - Server exception

Example

Use the following URL:

https://<host>:<port>/csa/rest/user/multipleSubscription/delete
?userIdentifier=90d965c0379fd06601379fd192b30ee6 Â

The following XML was sent in the request:

```

      <catalog>
        <id>90d965c0379fd06601379fd1936a0f05</id>
      </catalog>
    </catalogItem>
  </ServiceSubscription>
</ServiceSubscriptionList>
```

The following XML was returned. count indicates the number of subscriptions successfully deleted. A ServiceSubscription element is included for each deleted subscription.

To make this example more informative, note in the following return information that the first subscription is not deleted. A subscription will not be deleted during this call if the subscription was already deleted, it is not in the canceled state, permission is denied, or there is an authorization failure

```
<ServiceSubscriptionList>
  <count>1</count>
  <limit>0</limit>
  <ServiceSubscription>
    <id>90e72e283b05aff1013b0b2b43fc0356</id>
    <isCriticalSystemObject>false</isCriticalSystemObject>
    <disabled>false</disabled>
  </ServiceSubscription>
</ServiceSubscriptionList>
```

List instances for user

Details

URI	/user/myinstance
Method	GET
Parameters	userIdentifier=<user_id> Required; this user must be in the same organization as requestor, and must have the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=base Optional; the only valid value is <i>base</i>. detail=basic Optional; The only valid value is <i>basic</i>. requestor=<user_name> Required; user name must be valid, and is the user whose subscription list will be returned by this call. <i>requestor</i> must be in the same organization as the user specified by <i>userIdentifier</i>. creationStartDate=<yyyy-MM-ddTHH:mm:ss> Optional; instances for subscriptions created on or after start date and time will be included in the return. <i>T</i> serves as a separator between data and time. Time will default to 00:00:00 if not specified. Date and time are assumed to be in the time zone of the CSA server.

URI	/user/myinstance
	creationEndDate=<yyyy-MM-ddTHH:mm:ss> Optional; instances for subscriptions created before end date and time will be included in the return. <i>T</i> serves as a separator between data and time. Time will default to 00:00:00 if not specified. Date and time are assumed to be in the time zone of the CSA server.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Examples

The following URL was sent:

```
https://<host>:<port>/csa/rest/user/myinstance?userIdentifier=90d9652b67ss6a930135f35b327e00a0 &requestor=johnsmith
```

The following XML was returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<ServiceInstanceList>
  <count>6</count>
  <limit>0</limit>
  <ServiceInstance>
    <id>90d957ea3806fa7e01380f957d11070a</id>
    <name>MYSD_June 5, 2012 5:19:51 PM UTC</name>
    <displayName>MYSD</displayName>
    <state></state>
    <serviceInstanceState>...</serviceInstanceState>
    ...
  </ServiceInstance>
  ...
</ServiceInstanceList>
```

Utilization API

Use this API to retrieve a list of resource utilization objects for the specified subscription.

This REST API is supported only for sequenced designs and not for topology designs.

Base URL

https://<host>:<port>/csa/rest

Details

URI	/utilization/<subscription_id> See "List subscriptions for user" on page 180 for information on obtaining subscription IDs.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value.
Returns	200 - Ok 401 - Not authorized 404 - Not found 500 - Server exception

Example use context

An organization's policy is to do resource provider selection based on available capacity for all providers. The information returned by this API can be used to determine what resources are already in use.

Example

The following URL was sent:

https://<host>:<port>/csa/rest/utilization/90cec3a03a667c69013a6d7f0eea2cb3

The following XML was returned in the response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<UtilizationList
  <utilization>
    <resourceBindingId>90e72d913d936a9a013d937bdb570161</resourceBindingId>
    <resourcePool>
      <id>90e72d913d936a9a013d936c74040006</id>
      <objectId>90e72d913d936a9a013d936c74040006</objectId>
      <isCriticalSystemObject>false</isCriticalSystemObject>
```

```
<name>Pool_1_March 22, 2013 6:46:31 PM UTC</name>
<displayName>Pool 1</displayName>
<disabled>false</disabled>
<poolReference>poolref</poolReference>
</resourcePool>
<resourceProvider>
  <id>90e72d913d936a9a013d936c262b0004</id>
  <objectId>90e72d913d936a9a013d936c262b0004</objectId>
  <isCriticalSystemObject>false</isCriticalSystemObject>
  <name>Provider_1_March 22, 2013 6:46:11 PM UTC</name>
  <displayName>Provider 1</displayName>
  <disabled>false</disabled>
</resourceProvider>
<resourceType>
  <id>6A883A543D1248DDBB6045AD6A06BEA2</id>
  <isCriticalSystemObject>true</isCriticalSystemObject>
  <description>Megabytes of memory</description>
  <name>MEMORY</name>
  <displayName>Memory</displayName>
  <disabled>false</disabled>
</resourceType>
<serviceComponentId>90e72d913d936a9a013d937bdb56015a</serviceComponentId>
<serviceInstanceId>90e72d913d936a9a013d937bdb530138</serviceInstanceId>
<unit>
  <id>ED2CE3264F764F55877EE0CDFEE0EFB4</id>
  <isCriticalSystemObject>true</isCriticalSystemObject>
  <description>Megabytes</description>
  <name>MB</name>
  <displayName>MB</displayName>
  <disabled>false</disabled>
</unit>
<usage>1024</usage>
</utilization>
<utilization> ... </utilization>
<utilization> ... </utilization>
...
</UtilizationList>
```

Values for the detail parameter

The detail parameter has the following values:

- **Required:** Retrieves all the non-null and non-optional fields of an artifact. This includes fields with Java primitive types – byte, short, int, long, float, double, boolean and char.
- **Basic:** In addition to the Required fields of an artifact, retrieves nullable primitive types (Java wrapper classes) and Date, Time, TimeStamp and BigDecimal.
- **Standard:** In addition to the Basic fields of an artifact, retrieves all non-CSA type fields.

- **Template:** Retrieves all fields of an artifact except for artifact collection references and artifacts that are part of a containment relationship. This is same as the Full option without artifact collection references. This option is mainly used for performance reasons, because you could end up retrieving a large amount of data. For example, you can use this option if you do not want to load the base service instances when retrieving its service blueprint. Service instances are artifacts and are associated through a collection reference with its blueprint.
- **Full:** All fields except for artifacts that are part of a containment relationship. Retrieval of the internal artifacts is controlled by the scope parameter. Using this option has a performance impact (See Template option) because this option also returns artifact collection references.

Note: Some API calls do not support all possible values for this parameter.

Values for the `excludedoc` parameter

The `rest.excludedoc` property in the `csa.properties` file (`<CSA>/jboss-as/standalone/deployments/csa.war/WEB-INF/classes`) indicates if the document field should be included in the output of the REST response.

You can overwrite the default value (`excludedoc=true`) by adding the `excludedoc` parameter to the REST request URL. For example:

```
https://<host>:<port>/  
csa/rest/catalog/4028caf84bd9cc4a014bd9d802b801c2/offering/4028caf84bd9cc4a014bd9d802b801c  
2?userIdentifier=90d96588360da0c701360da0f1d600a1&excludedoc=false
```

Values for the `scope` parameter

The `scope` parameter has the following values:

- **Base:** Retrieves the root entity of the artifact including all required attributes.
- **Baseplusone:** In addition to Base, retrieves all first level child artifacts.
- **Subtree:** In addition to Base, retrieves all its descendants. Using this option could have a performance impact because the information being retrieved can be very large.
- **View:** Retrieves only those attributes defined for the view specified in the `detail` parameter.

Values for the `restrict` parameter

The `rest.restrict` property in the `csa.properties` file (`<CSA>/jboss-as/standalone/deployments/csa.war/WEB-INF/classes`) indicates if the fields specified in the `rest.restrict.fields` property should be included in the output of the REST response.

The `rest.restrict.fields` property in the `csa.properties` file includes a comma separated list of the fields that are not included in the REST response. By default the `rest.restrict.fields` property includes these fields: `createdBy`, `updatedBy`, `createdOn`, `updatedOn`, `description`, `iconUrl`, and `categoryType`.

The exclusion of primitive types such as booleans (`isCriticalSystemObject` or `disabled`) is not supported.

The `createdBy`, `updatedBy`, `createdOn` and `updatedOn` fields are always displayed for service instance, service request, and service subscription regardless of the configuration.

The `restrict` parameter has the following values:

- `True`: Fields included in the `rest.restrict.fields` property are not included in the REST response. This is the default.
- `False`: Fields included in the `rest.restrict.fields` property are included in the REST response.

You can overwrite the default value (`restrict=true`) by adding the `restrict` parameter to the REST request URL. For example:

```
https://<host>:<port>/csa/rest/artifact/4028caf84bd9cc4a014bd9d802b801c2?userIdentifier=90d96588360da0c701360da0f1d600a1&restrict=false
```

Primitive values reset to default if no value is provided

When you make a PUT request from the REST API, if you do not provide values for primitive properties, these properties are set to their default values.

Some properties of an artifact are modeled in Java using primitive types. This can cause certain issues when using the PUT requests via REST API. When a PUT request is sent to the CSA instance using a REST API, the data that represents an artifact or a part of an artifact is converted to a Java object. All properties with primitive types in a Java object always need to have values. When you do not provide values for these properties, the default values are used to satisfy the requirement.

The following are the primitive types in Java:

- `byte`
- `short`
- `int`
- `long`
- `float`

- double
- char
- boolean

Workaround: Invoke a GET call first, and then modify only the necessary properties from the GET response. This modified response should be sent as part of the PUT request.

Deprecated APIs

The following API calls are deprecated from CSA:

- Importzip
- List approvals in the catalog
- List instances in the catalog
- List requests in the catalog
- List subscriptions in the catalog

Importzip API

The GET /importzip API has been deprecated. Use /import instead as using the deprecated API will not include new functionality.

Use this API to import an artifact from an artifact archive. Archives are created via the export REST API, the content archive tool, or the Cloud Service Management Console. The import operation imports the primary artifact and all associated artifacts.

Base URL

https://<host>:<port>/csa/rest

Details

URI	/importzip
Method	POST
Parameters	• userIdentifier=<user_id>

Required; the user ID you want to use as credentials for this API call. See ["Get userIdentifier" on page 129](#) for the steps required to get the userIdentifier value.

- `file=<file_name>`

Required; multipart archive zip to be imported. Note that the directory the file will be imported from is defined by the REST client or browser in use. Typically the file parameter will not include a directory path.

- `forceCreation=[true|false]`

Optional; default is false. If true, any existing artifacts of the same type with the same name will be preserved (not overwritten) and renamed. Existing references to these artifacts will automatically use the renamed artifacts. New artifacts are created from the archive. Cannot be used with *update* parameter.

Caution: Produces same results as *updatePreserveExisting*. Allows for backward compatibility.

- `update=[true|false]`

Optional; default is false. If true, any existing artifacts of the same type and with the same name will be overwritten; otherwise the artifacts are created. Cannot be used with *updatePreserveExisting* parameter.

- `updatePreserveExisting=[true|false]`

Optional; default is false. If true, any existing artifacts of the same type with the same name will be preserved (not overwritten) and renamed. Existing references to these artifacts will automatically use the renamed artifacts. New artifacts are created from the archive. Cannot be used with *update* parameter.

- `orgForCatalogImport=<organization_name>`

Required for import of catalog archive; the name of the organization to be used when creating the imported catalog.

- `associateProviders=[true|false]`

Optional; default is false. If true, resource providers in the archive are bound to existing resource offerings and resource environments of the same provider type and display name in the database.

- `validateType=[COMPONENT_PALETTE | CATALOG | SERVICE_OFFERING | SERVICE_DESIGN | RESOURCE_OFFERING | RESOURCE_ENVIRONMENT]`

Optional; if specified, content archive is verified to be of the specified type.

Returns	200 - Updated
	400 - Bad request
	404 - Not found
	500 - Server exception

Caution: Component palette import is an update operation, and so `associateProviders` and `updatePreserveExisting` parameters will be ignored.

The following headers must be set when using this API to upload the content archive:

- Content-type: multipart/form-data
- Content-Disposition: form-data; name="file"
- Content-Type: application/octet-stream

Example

The following URL was sent:

```
https://localhost:8444/csa/rest/importzip
?userIdentifier=90d96588360da0c701360da0f1d5f483&file= SERVICE_DESIGN_Simple_
Compute_Linux_90cec2023cc75f8a013cc7643ad00034.zip
```

The following XML was returned:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<importMessageList>
  <messages>Service design Simple Compute Linux imported successfully.
  (Id=90cec2ff3dd11298013dd1139eb7004f)</messages>
  <messages>Resource offering SA Offering imported successfully.
  (Id=90cec2ff3dd11298013dd113992d000d)</messages>
  <messages>Resource offering uCmdb Offering imported successfully.
  (Id=90cec2ff3dd11298013dd113977d0008)</messages>
  <messages>Resource offering vCenter Offering imported successfully.
  (Id=90cec2ff3dd11298013dd1139a4f0016)</messages>
</importMessageList>
```

List approvals in the catalog

Deprecation Notice

The GET /catalog/<catalog_id>/approval URI has been deprecated. Use URI /user/myapproval instead as using the deprecated URI will not allow access to new functionality including the ability to list all approvals from all catalogs for a specified approver.

Details

URI	/catalog/<catalog_id>/approval Use "List catalogs" on page 91 to get the catalog ID.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base baseplusone subtree view] Optional; default is <i>base</i>. If value is <i>base</i>, then the object is returned. If value is <i>baseplusone</i>, then the object and its first level children are returned. If value is <i>subtree</i>, then the object and all of its descendants are returned. If the value is <i>view</i>, then the view parameter is required. detail=[required basic standard template full] Optional; default is <i>basic</i>. See "Values for the detail parameter" on page 193. Some API calls do not support all possible values for this parameter. approver=<user_name> Optional; the name of the approver. returnRetired=[true false] Optional; default is <i>false</i>. Caution: The users specified by userIdentifier and approver must be in the same organization.
Returns	200 - Ok

URI	/catalog/<catalog_id>/approval Use "List catalogs" on page 91 to get the catalog ID.
	401 - Not authorized 500 - Server exception

List instances in the catalog

Deprecation Notice

The GET /catalog/<catalog_id>/instance URI has been deprecated. Use URI /user/myinstance instead as using the deprecated URI will not allow viewing instances created by users who previously had access to the catalog, but no longer have access.

Details

URI	/catalog/<catalog_id>/instance Use "List catalogs" on page 91 to get the catalog ID.
Method	GET
Parameters	userIdentifier=<user_id> Required; the user ID you want to use as credentials for this API call. This user should be a consumer user who has the necessary permissions for the data you want to work with. See "Get userIdentifier" on page 129 for the steps required to get the userIdentifier value. scope=[base view] Optional; default is <i>base</i>. detail=basic Optional; The only valid value is <i>basic</i>. requestor=<user_name> Optional; user name must be valid and must be authorized to view the request.
Returns	200 - Ok 401 - Not authorized 500 - Server exception

Examples

The following URL was sent:

https://<host>:<port>/csa/rest/catalog/402895e33732af18013732b6f435006b/
instance?userIdentifier=90d9652b67ss6a930135f35b327e00a0

The following XML was returned:

```
