Codar 1.92

February, 2018

Codar is a continuous delivery solution that provides deployment and release management of complex multi-tier applications across the application lifecycle. It automates the deployment of applications by embracing existing content from Chef, SA, and so on and representing this content as components.

Codar facilitates continuous delivery in which every change to the system is releasable and every code change can be deployed in production. It enables automation of continuous delivery where every code change triggers a build, which is deployed, automated unit tests are executed, and the application is automatically deployed to an environment based on policies that are defined in a runbook automation flow.
