Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To verify you are using the most recent edition of a document, go to

[https://softwaresupport.softwaregrp.com/group/softwaresupport/search-result?doctype=manuals?keyword=.](https://softwaresupport.softwaregrp.com/group/softwaresupport/search-result?doctype=manuals?keyword=)

To check for recent software patches, go to [https://softwaresupport.softwaregrp.com/group/softwaresupport/search-result?doctype=patches?keyword=.](https://softwaresupport.softwaregrp.com/group/softwaresupport/search-result?doctype=patches?keyword=)

This site requires that you register for a Passport and sign in. To register for a Passport ID, go to

<https://cf.passport.softwaregrp.com/hppcf/login.do>.

Or click the **Register** link at the top of the Software Support page.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your sales representative for details.

For information and details about the products, services, and support that offers, contact your Client Director.

Support

Visit the Software Support Online web site at <https://softwaresupport.softwaregrp.com/>.

This web site provides contact information and details about the products, services, and support that offers.

online support provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the support web site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Manage software licenses
- Download new versions of software or software patches
- Access product documentation
- Manage support contracts
- Look up support contacts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

Most of the support areas require you to register as a Passport user and sign in. Many also require a support contract.

To register for a Passport ID, go to <https://cf.passport.softwaregrp.com/hppcf/login.do>.

- Chapter 1: Overview 6
- Chapter 2: Running the Dynamic Partitioning Tool 7
 - Connecting to the Management Database 8
 - Connecting to the Profile Database 9
 - Configuration Parameters 9
 - Calculating Recommended Partition Slice10
- Chapter 3: Applying Recommendations to APM Configuration12
- Chapter 4: Troubleshooting13
- Send documentation feedback 14

Chapter 1: Overview

As an APM administrator, use the APM Partition Manager's Dynamic Partitioning Tool to maintain an optimal partitioning policy in the profile databases.

You run the Dynamic Partitioning Tool against your APM profile database to create partitioning configuration recommendations.

Before using the Dynamic Partitioning Tool, read the following carefully:

- **Database statistics** – The Dynamic Partitioning Tool depends on updated database statistics in the profile database. If necessary, update the database statistics in the profile database before using the tool. If the database statistics are not updated, the tool may create incorrect recommendations.
- **Ongoing tool execution** – It is recommended to run the Dynamic Partitioning Tool once a month to validate that the current partitioning configuration is relevant for the current profile database condition.
- **Lack of data** – Do not use this tool immediately after installing a profile database since a lack of data in the profile database may result in inaccurate recommendations.

Chapter 2: Running the Dynamic Partitioning Tool

The Dynamic Partitioning Tool is located in the **<HPE APM>\tools\dynamic_partitioning** folder.

To run the Dynamic Partitioning Tool, you need to create a connection to the:

- Management database (see [Connecting to the Management Database, on the next page](#))
- Profile database (see [Connecting to the Profile Database, on page 9](#))

Connecting to the Management Database

1. Open the Dynamic Partitioning Tool:
 - In Windows, go to the Dynamic Partitioning Tool root folder and click **dynamic_partitioning.bat**
 - In Linux, go to the Dynamic Partitioning Tool root folder and click **dynamic_partitioning.sh**
2. In the Management Connection properties area, provide the following information:

Parameter	Description
Database type	For an oracle database, select Oracle . For an SQL Server database, select SQL Server .
Host name	The host name of the database.
SID	For an Oracle database, the Service Name Identifier of the database.
Database Name	For an SQL Server database, database identifier.
Port	The port number of the database.
Connect using	For an SQL Server only. Select Windows authentication or SQL Server authentication .
User name	The user name of the database. NOTE: For an SQL Server, if you connect using Windows authentication you do not need to provide a user name.
Password	The password of the database NOTE: For an SQL Server, if you connect using Windows authentication you do not need to provide a password.

3. Click **Connect** to establish a connection to the management database.

Connecting to the Profile Database

After connecting to the Management database, choose the profile database to analyze.

1. From the **Profile** drop-down list, select the profile database to analyze.

The screenshot shows a web-based configuration interface with two main sections: "Management connection properties" and "Profile connection properties".

- Management connection properties:**
 - Database type: Oracle (dropdown)
 - Host name: 10.216.50.60 (text input)
 - SID: HPPARTDB (text input)
 - Port: 1521 (text input)
 - User name: surge_mgmt (text input)
 - Password: masked with dots (password input)
- Profile connection properties:**
 - Profile: (empty dropdown)
 - Password: (empty text input)
 - Connect: (button)

2. In the **Password** field, enter the profile database password.
3. Click **Connect** to establish a connection to the Profile database.

Configuration Parameters

The configuration parameters are in the **configuration.properties** file which is located in the **config** directory. These parameters are read when the Dynamic Partitioning Tool starts. If you modify these parameters, you must restart the Dynamic Partitioning Tool.

The following table summarizes the parameters which can be configured:

Parameter	Description
query.timeout	The number of seconds the driver waits for a query to execute. Zero means there is no limit. Default value: 120
login.timeout	The maximum time in seconds that a driver waits while attempting to connect to a database. Zero means there is no limit.

Parameter	Description
	Default value: 20
partition.rows	The optimal partition size. Default value: 1000000
epm.max	The EPM (Events per Minute) high value threshold. Default value: 8800
logger.Level	Defines the minimum set of levels recognized by the system. Possible values are: OFF, FATAL, ERROR, WARN, INFO, DEBUG, and ALL Default value: INFO

Calculating Recommended Partition Slice

After connecting to the Profile database, the following screen appears displaying the Partition Manager related tables:

The screenshot shows a window titled "Profile -> Profile database" with two connection property panels and a main table. The left panel shows "Management connection properties" for an Oracle database at 10.216.50.60. The right panel shows "Profile connection properties" for a profile named SURGE_PROFILE1. The main table lists various database tables with their current and recommended partition slices and EPM values.

Category/Name of table in Database	Actual partition slice	Recommended partition slice	Recommended EPM
<input type="checkbox"/> SOA			
<input type="checkbox"/> M_WP01F1_F	4 HOUR(s)		
<input type="checkbox"/> M_WP01F2_F	3 DAY(s)		
<input type="checkbox"/> M_WP01F3_F	2 DAY(s)		
<input type="checkbox"/> M_WE01F1_F	16 HOUR(s)		
<input type="checkbox"/> M_WE01F2_F	3 DAY(s)		
<input type="checkbox"/> M_WE01F3_F	2 DAY(s)		
<input type="checkbox"/> UDX			
<input type="checkbox"/> M_GN01F1_F	1 DAY(s)		
<input type="checkbox"/> M_GN01F2_F	3 DAY(s)		
<input type="checkbox"/> M_GN01F3_F	7 DAY(s)		
<input type="checkbox"/> M_GW01F1_F	1 DAY(s)		
<input type="checkbox"/> M_GW01F2_F	3 DAY(s)		
<input type="checkbox"/> M_GW01F3_F	7 DAY(s)		
<input type="checkbox"/> M_EV01F1_F	7 DAY(s)		
<input type="checkbox"/> M_LA01F1_F	2 MONTH(s)		
<input type="checkbox"/> M_LN01F1_F	12 MONTH(s)		
<input type="checkbox"/> M_LR01F1_F	4 DAY(s)		
<input type="checkbox"/> M_AE01F1_F	6 MONTH(s)		
<input type="checkbox"/> M_EP01F1_F	3 WEEK(s)		
<input type="checkbox"/> M_EP01F3_F	8 MONTH(s)		
<input type="checkbox"/> M_TK01F1_F	2 DAY(s)		
<input type="checkbox"/> M_PR01F1_F	2 WEEK(s)		
<input type="checkbox"/> M_PR01F2_F	5 WEEK(s)		
<input type="checkbox"/> M_PB01F1_F	2 WEEK(s)		

Buttons at the bottom: Calculate slice, Export data

This screen displays the following information:

- **Category/Name of table in database** – Displays the table category and the name of the tables in that category. Table categories are highlighted with blue background.
- **Actual partition slice** – Displays the current partitioning policy for each table.
- **Recommended partition slice** – Displays the recommended partitioning policy for each table. This column is completed during the calculation process.
- **Recommended EPM** – Displays the EPM. The EPM determines the size of each partition. This column is completed during the calculation process.

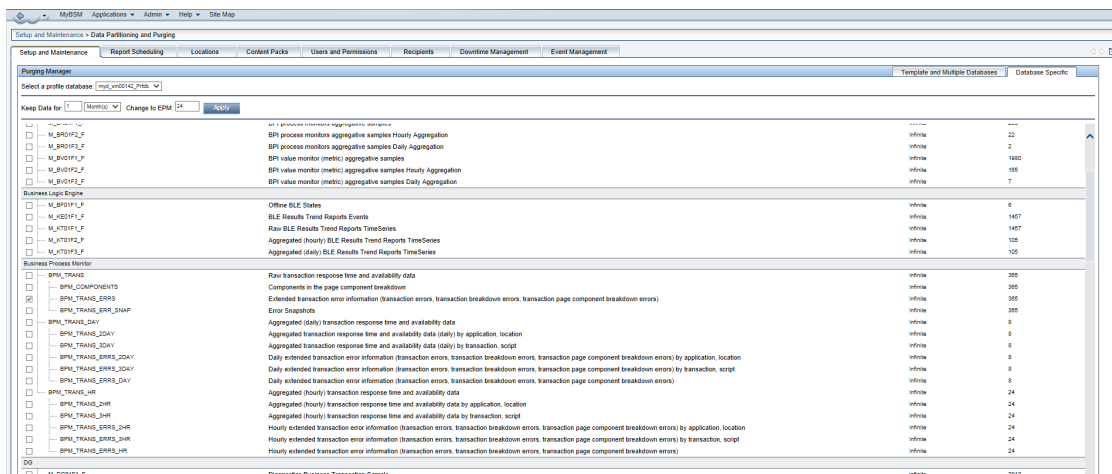

To calculate the recommended partition slice:

1. Select the tables to analyze. You can select an entire category or a single table.
2. Click **Calculate slice**. A progress bar shows the calculation progress.
If no statistics are found, the table cannot be analyzed. A *no statistics* message appears in the **Recommended partition slice** and **Recommended EPM** columns.
3. To export the calculation results and actual partition size to a PDF file, click **Export data**. The generated PDF report is saved in the **Reports** directory, which is located under the installation root directory.

Chapter 3: Applying Recommendations to APM Configuration

To apply the partition recommendation to the APM configuration:

1. Click **APM > Admin > Platform > Setup and Maintenance > Data Partitioning and Purging.**

2. Click the **Database Specific** tab.
3. From the **Select a profile database** drop-down list, select the required profile database.
4. In the list of tables, select the modified tables.
5. In the **Change to EPM** field, enter the recommended EPM value.
NOTE:
 Make sure the **Keep Data for** field matches the existing purging policy for the modified samples. Modifying this value might result in historical data loss.
6. Click **Apply**. The new configuration becomes active when the current active partition becomes inactive (when new partitions are allocated).

Chapter 4: Troubleshooting

If an error occurs when running the Dynamic Partitioning Tool, a detailed message is written to the log file. The log files are located in the **logs** directory under the installation root folder.

In addition, a detailed message is displayed.

Click the **Details** button in the error message to open an exception information dialog box.

Send documentation feedback

If you have comments about this document, you can [contact the documentation team](#) by email. If an email client is configured on this system, click the link above and an email window opens with the following information in the subject line:

Feedback on Dynamic Partitioning Tool - Best Practices (Micro Focus Application Performance Management 9.50)

Add your feedback to the email and click **Send**.

If no email client is available, copy the information above to a new message in a web mail client, and send your feedback to docs.feedback@microfocus.com.

We appreciate your feedback!
