

Network Operations Management

2018.05

Released in June 2018

Network Operations Management (NOM) introduces an expanded approach to service management for unified, modern enterprise networks. It builds upon our integrated capabilities to monitor and remedy fault, performance, configuration, and compliance of physical, virtual, and software defined network infrastructure. NOM is designed to increase both NOC and Network Engineering Team collaboration, at a time of increased technological complexity to solve problems and deploy new networks faster than ever.

For more information about NOM, see <https://software.microfocus.com/en-us/products/network-operations-management-suite/overview>.
