November 1st, 2018

Micro Focus ADM Idea Exchange is launched!

We are pleased to announce the launch of Idea Exchange, a new addition to Micro Focus Software Community. Idea Exchange is a web-based platform where users can submit Enhancement Requests (ERs) / new ideas to improve ADM products, engage in dialogue with our Product Managers and SMEs, and vote on ideas that you would like to see in the products.

Enhancement Requests (ERs) for ADM products listed below must be submitted via Idea Exchange:

- For ALM Octane, please submit ERs at Octane Idea Exchange

As a community member, you can post your ideas the same way you post community messages, add comments and show support to other's ideas by voting. We have already seeded these Idea Exchanges with ideas from the existing ER system, among others. Please take a look and vote for your favorites. Don't see your #1 idea related to your product? Please add it!

This new Idea Exchange offers greater transparency, provides visibility to other members' requests, and allows you to show your support (votes) and help refine ideas. While there is no guarantee that your ideas will be accepted, Micro Focus product management will actively monitor the community and provide updates as needed. These updates are visible to all community members so anyone can track the status of the ideas.

For more information on submitting ideas in Idea Exchange, please review our submission guidelines and review process. Login with your passport account or create an account here to get started.

We encourage you to share your ideas, vote for your favorite suggestions and enhance existing ideas with your feedback and comments. Your feedback on the new Idea process is much appreciated – please don't hesitate to let the moderator know what you think!

Thank you!
