

Operations Bridge Manager 2018.11

Released in November 2018

Operations Bridge Manager (OBM) is the core component of the Operations Bridge Suite. It dynamically and automatically discovers and correlates data, event topology, and metrics. As part of the Operations Bridge, it consolidates all IT infrastructure monitoring in a central event console, and relates the events to the IT services that depend on that infrastructure.

Benefit from automated monitoring, fast root cause identification, prioritization, and automated remedial action with this simplified, unified, and automated IT operations management software.

For latest information on OBM 2018.11, see [OBM Release Notes](#).
