Overview

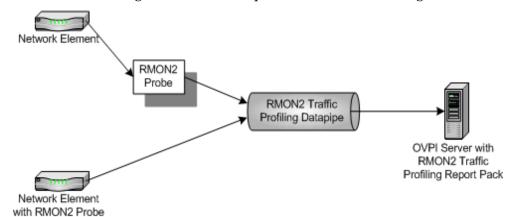

This overview covers the following topics

- OVPI and RMON2 Probes
- Objects, reports, and groups
- Ways to customize reports
- Sources for additional information

OVPI and RMON2 Probes

An RMON2 probe queries network elements for information about network traffic and stores the results in an SNMP MIB. The information in the MIB indicates where network traffic is going, traffic volume, and which protocols are involved.

The figure below shows the RMON2 Traffic Profiling Datapipe collecting data from the RMON2 MIB and loading the results into OpenView Performance Insight (OVPI).

OVPI processes the data collected by the datapipe, creating trending analysis for:

- Utilization
- Percentage of total interface traffic
- Bytes
- Average bytes per packet

Supported Probes

RMON2 Traffic Profiling 2.0 supports the following RMON2 probes:

- Agilent
- Cisco NAM
- NetScout

Version History

The following table outlines recent enhancements to RMON2 Traffic Profiling.

Package Version	RNS Version and Release Date	Features/Enhancements
1.0	RNS 3.0, May 2003	15 reports; Sybase support
2.0	RNS 4.0, October 2003	OVPI Object Manager support
2.0	RNS 5.0, April 2004	No changes
2.0	RNS 6.0, August 2004	No changes

Objects, Reports, and Groups

If you have access to the Management Console, you can display the reports in this package by opening the Object/Property Management window and navigating to the following object:

RMON2 Probe Interface

Look for a list of reports under **Report Specific Tasks**. If you log in to the OVPI Application Server and view RMON2 Traffic Profiling remotely, you will see three folders:

- ALMATRIX
- HOST
- TOP TEN

The ALMATRIX folder contains the following reports:

- Daily ALMATRIX Details
- Daily ALMATRIX Summary
- Hourly ALMATRIX Details
- Hourly ALMATRIX Summary
- Monthly ALMATRIX Detail
- Monthly ALMATRIX Summary

The HOST folder contains the following reports

- Daily Host Detail
- Daily Host Summary

- Hourly Host Detail
- Hourly Host Summary
- Monthly Host Detail
- Monthly Host Summary

The TOP_TEN folder contains the following reports:

- Daily Top Ten
- Hourly Top Ten
- Monthly Top Ten

Summary reports aggregate data by application and host devices and display hourly, daily, and monthly trending analysis. Use these reports to find out whether recent excess traffic was a short-lived anomaly or a longer-standing trend that requires corrective action.

Detail reports drill down further on Summary report data, allowing you to see the contribution of source/destination and host/protocol combinations.

Top Ten reports provide two lists, the protocols that had the greatest impact on interface utilization, and the hosts that had the greatest impact on interface utilization.

RMON2 Traffic Profiling 3.0 adds the following groups to the object tree:

Ways to Customize Reports

The contents of a report can be customized by applying group filters, editing parameters, editing tables and graphs, and importing location data. While group filters are designed for service providers who need customer-specific reports, any user can import locations, edit parameters, or change view options for tables and graphs.

Group Filters

If you intend to share your reports with customers, or let divisions within your enterprise see division-specific performance data, you will need customer-specific reports containing data limited to one customer. Creating customer-specific reports involves the following tasks:

- Importing customer names and device locations using Common Property Tables
- Creating a group account for all of the users affiliated with a particular customer
- Creating a group filter for the group account

For more information about creating filters for group accounts, refer to the *Performance Insight Administration Guide*.

Editing Parameters

When you edit a parameter, you apply a constraint to the report that eliminates the data you are not interested in seeing. For example, if you edit the ProbeName parameter, only data for the probe you typed in the ProbeName field appears in the report, and data for all other probes drops out of the report. You can apply multiple constraints at the same time. RMON2 Traffic Profiling supports the following parameters:

- ProbeName
- Interface Name
- IF Customer Name
- IF Customer ID
- Start Time
- End_Time
- Client Name (of source)
- Server Name (of destination)
- Application Name (of protocol)

If you are using the Web Access Server to view reports, edit parameters by clicking the Edit Parameters icon at the bottom right-hand corner of the report. When the Edit Parameters window opens, enter the constraint in the field and click **Submit**.

If the client component of OVPI is installed on your system, you have access to Report Viewer. To edit a parameter, select **Edit > Parameter Values** from the menu bar. The Modify Parameter Values window opens. Click the **Current Value** field, enter a new value, and click **OK**.

Importing Locations

Although RMON2 Traffic Profiling operates without importing custom property information, none of the location-oriented reports will contain useful information unless you add locations. To add locations to reports, use the property import utility bundled with Common Property Tables. For details, refer to the *Common Property Tables 3.5 User Guide*.

Sources for Additional Information

This user guide contains samples of some of the reports in the RMON2 package. The demo package that comes with RMON2 is complete, containing a sample of every report in the package. If you have access to the demo package and you want to know what fully-populated reports look like, install the demo package. Like real reports, demo reports are interactive. Unlike real reports, demo reports are static and do not change over time.

The following documents are related to this manual:

- RMON2 Traffic Profiling Report Pack 2.0 Release Statement
- RNS 6.0 Release Notes, August 2004
- Common Property Tables 3.5 User Guide
- Interface Discovery Datapipe 2.0 User Guide

Manuals for OVPI and the reporting solutions that run on OVPI are posted to the following website:

http://www.hp.com/managementsoftware

Select **Technical Support** > **Product Manuals** to reach the **Product Manuals Search** page. The user guides for the core product are listed under **Performance Insight**. The user guides for report packs, datapipes, and the value-add components for NNM are listed under **Reporting and Network Solutions**.

Each manual listed under **Reporting and Network Solutions** indicates the month and year of publication. If a user guide is revised and reposted, the date of publication will change even if the software version number does not change. Since revised user guides are posted to this site on a regular basis, you should search this site for updates before using an older PDF that may not be the latest PDF available.

Sources for Additional Information

Package Installation

This chapter covers the following topics:

- Guidelines for a Smooth Install
- Installing RMON2 Traffic Profiling 2.0
- Package Removal

Guidelines for a Smooth Install

Each reporting solution that runs on OVPI consists of a report pack and one datapipe, or sometimes a report pack and multiple datapipes. When you install the datapipe, you configure OVPI to collect a specific type of performance data at a specific polling interval. When you install the report pack, you configure OVPI to summarize and aggregate performance data in a specific way.

The RNS 6.0 CD includes NNM components as well as OVPI components. When you insert the CD, launch the package extraction interface, and select OVPI report packs for extraction, the install script extracts every OVPI package from the CD and copies the results to the Packages directory on your system. When the extraction process finishes, the install script prompts you to launch Performance Insight and start Package Manager. Before using Package Manager, review the following guidelines.

Software Prerequisites

RMON2 Traffic Profiling 3.0 has the following prerequisites:

- OVPI 5.0
- All available service packs for OVPI 5.0
- Common Property Tables 2.2 or higher
- Interface Discovery Datapipe 2.0

If you are not currently running any version of the Interface Discovery Datapipe or any version of Common Property Tables, you may install these packages when you install RMON2 Traffic Profiling 2.0.

If you are running Common Property Tables 2.2, you have the option of upgrading to version 3.0 or version 3.5. Installing the upgrade package is easy; however, you cannot install the upgrade package and other packages at the same time. Install the upgrade package for Common Property Tables and *only* the upgrade package for Common Property Tables.

Datapipes cannot be upgraded. If you are currently running an earlier version of the Interface Discovery Datapipe, first remove your earlier version, then install the new version.

Upgrading to RMON2 Traffic Profiling 2.0

If you are already familiar with Package Manager, you should have no difficulty installing the upgrade package. Keep in mind that you will need to delete certain packages that cannot be upgraded. Here is an outline of the upgrade procedure:

- 1 Stop OVPI Timer and extract OVPI packages from the RNS 6.0 CD.
- 2 If desired, upgrade to Common Property Tables 3.0 or 3.5.
- 3 Delete these packages:
 - Interface Discovery Datapipe 1.1
 - RMON2 Traffic Profiling Datapipe 2.0
- 4 Install Interface Discovery Datapipe 2.0.
- 5 Install UPGRADE RMON2 Traffic Profiling 1.0-to-2.0.
- 6 Install RMON2 Traffic Profiling Datapipe 2.0.
- 7 Restart OVPI Timer.

Polling Policies for Remote Pollers

When you uninstall an existing datapipe, the following information will be lost:

- Polling policies for remote pollers
- Multi-poller polling policies
- Type and group information associated with a modified polling policy

You can export existing configurations by using the collection_manager and group_manager commands.

Exporting Policy Configurations

If your environment contains polling policy assignments to remote pollers, use the collection_manager command to export polling policies to a file.

UNIX: As user trendadm, run the following command:

```
cd $DPIPE_HOME
```

./bin/collection_manager -export -file /tmp/savePollingPolicy.lst

Windows: As Administrator, launch a command window. Navigate to the OVPI install directory and execute the following command:

bin\collection_manager -export -file \temp\savePollingPolicy.lst

Exporting Custom Polling Groups

If your environment contains customized polling groups, use the group_manager command to export groups to individual .xml files in a directory.

UNIX: As user trendadm, execute the following command:

```
cd $DPIPE_HOME
```

./bin/group_manager -export_all -outfile /tmp/savePollingGroups

Windows: As Administrator, launch a command window, then navigate to the OVPI install directory and execute the following command:

bin\group_manager -export_all -outfile \temp\savePollingGroups

Custom Data Table Views

If you created custom data table views using existing property table views, drop the custom data table views now, before upgrading the report pack. Dropping views will not result in lost data

Install Procedure for Distributed Systems

Installation is more complex if you intend to run this package as a distributed system across multiple servers. Here is an overview of the installation procedure:

- 1 Verify that the central server and every satellite server are running OVPI 5.0 and all available service packs for OVPI 5.0.
- **2** Disable trendcopy on the central server.
- 3 Install RMON2 Traffic Profiling 2.0 on the central server.
- 4 Install RMON2 Traffic Profiling 2.0 and the RMON2 Traffic Profiling Datapipe on each satellite server.
- **5** Re-enable trendcopy on the central server.

When the installation is complete, set up connections with satellite server databases, configure trendcopy pull commands, and switch off aggregations at each satellite server. For details, see Chapter 4, Distributed Systems.

Installing RMON2 Traffic Profiling 2.0

Complete the following tasks to install RMON2 Traffic Profiling 2.0:

- Stop OVPI Timer and extract OVPI packages from the RNS CD
- Upgrade to Common Property Tables 3.0 or higher (optional)
- Install RMON2 Traffic Profiling

Task 1: Stop OVPI Timer and extract OVPI packages from the RNS CD

- 1 Log on to the system. On UNIX® systems, log on as root.
- 2 Stop OVPI Timer and wait for processes to terminate.

On Windows, do the following:

- a From the Control Panel, select Administrative Tools > Services.
- **b** Select OVPI Timer from the list of services.
- **c** From the Action menu, select **Stop**.

On UNIX, as root, do one of the following:

- HP-UX: sh /sbin/ovpi_timer stop
- Sun: sh /etc/init.d/ovpi_timer stop
- 3 Insert the RNS 6.0 CD.

Windows: The Main Menu automatically displays.

UNIX:

- a Mount the CD (if the CD does not mount automatically)
- **b** Navigate to the top level directory on the CD
- c Run ./setup.
- 4 Type 1 in the choice field and press Enter. The install script displays a percentage complete bar. When the copy is complete, the install script starts Package Manager. The Package Manager welcome window opens.

Task 2: Upgrade to Common Property Tables 3.0 or higher (optional)

If you are not running any version of Common Property Tables, skip this task.

The RMON2 Traffic Profiling Report Pack 2.0 requires Common Property Tables 2.2. You have the option of running version 2.2 or upgrading to version 3.0 or version 3.5. If you install an upgrade package, do not install other packages at the same time. Install the upgrade package for Common Property Tables and *only* the upgrade package for Common Property Tables. When the installation finishes, click **Done** to return to the Management Console.

Task 3: Install RMON2 Traffic Profiling

- 1 From the Management Console, select **Tools > Package Manager**. The Package Manager welcome window opens.
- 2 Click Next. The Package Location window opens.
- 3 Click **Install**. Approve the default installation directory or select a different directory if necessary.
- 4 Click **Next**. The Report Deployment window opens. Accept the default for Deploy Reports. Type your user name and password for the OVPI Application Server.
- 5 Click **Next**. The Package Selection window opens.

- 6 Click the check box next to the following packages:
 - RMON2 Traffic Profiling 2.0
 - RMON2 Traffic Profiling Demo

Installing the demo package is optional. You may install the demo package separately, with no other packages, or you may install the demo package along with everything else.

- RMON2 Traffic Profiling Datapipe 2.0
- Interface Discovery Datapipe 2.0 (if not already installed)
- Common Property Tables 3.5 (if not already installed)
- 7 Click Next. The Type Discovery window opens. Disable the default.
- 8 Click Next. The Selection Summary window opens.
- 9 Click Install. The Installation Progress window opens. When installation finishes, a package installation complete message appears.
- 10 Click **Done** to return to the Management Console.
- 11 Restart OVPI Timer.

On Windows, do the following:

- a From the Control Panel, select Administrative Tools > Services
- **b** Select OVPI Timer from the list of services.
- **c** From the Action menu, select **Start**.

On UNIX, as root, enter one of the following commands:

- HP-UX: sh /sbin/ovpi_timer start
- Sun: sh /etc/init.d/ovpi_timer start

Package Removal

Follow these steps to uninstall the RMON2 Traffic Profiling Report Pack and RMON2 Traffic Profiling Datapipe:

- 1 Log on to the system. On UNIX systems, log on as root.
- 2 Stop OVPI Timer and wait for processes to stop running.

On Windows, do the following:

- a From the Control Panel, select Administrative Tools > Services
- **b** Select OVPI Timer from the list of services.
- **c** From the Action menu, select **Stop**.

On UNIX, as root, enter one of the following commands:

- HP-UX: sh /sbin/ovpi_timer stop
- Sun: sh /etc/init.d/ovpi_timer stop

- From the Management Console, start Package Manager. The Package Manager welcome window opens.
- 4 Click **Next**. The Package Location window opens.
- 5 Click Uninstall.
- 6 Click **Next**. The Report Undeployment window opens. Accept the default for Undeploy Reports, application server name, and port.
- 7 Click **Next**. The Package Selection window opens.
- **8** Click the check box next to the following packages:
 - RMON2 Traffic Profiling
 - RMON2 Traffic Profiling Datapipe
 - RMON2 Traffic Profiling Demo (if installed)
- 9 Click Next. The Selection Summary window opens.
- 10 Click **Uninstall**. The Progress window opens. When the uninstall process is complete, a package removal complete message appears.
- 11 Click **Done** to return to the Management Console.
- 12 Restart OVPI Timer.

On Windows, do the following:

- a From the Control Panel, select Administrative Tools > Services
- **b** Select OVPI Timer from the list of services.
- **c** From the Action menu, select **Start**.

On UNIX, as root, enter one of the following commands:

- HP-UX: sh /sbin/ovpi_timer start
- Sun: sh /etc/init.d/ovpi timer start

Removing the RMON2 Traffic Profiling Report Pack automatically removes the datapipe even if you do not select the datapipe for removal.

Polling Groups and MIB Values

This chapter covers the following topics:

- How to add RMON2 probes to polling groups
- How to set MIB values
- Command line options for configAlMatrix.pl

Adding Probes and Setting MIB Values

Follow these steps to add probes to Polling Groups:

- 1 Using Polling Policy Manager, do the following:
 - a Add each RMON2 probe node to the RMON2 polling group.
 - b Specify the Community String Profile for each node added to the RMON2 polling group. Typically, you use the default settings (Read: public; Write: private). However, if you configured an RMON2 probe to use a non-default community string profile, you must configure this non-default community string profile for each node.
- 2 Using the OVPI SNMP Tool ConfigAlMatrix.pl command (click the Set Table button), or a tool of your own choice, set the following MIB objects:

Table 1 Variables Under hlMatrixControlTable

MIB Object	OID	Value
hl Matrix Control NIM ax Desired Entries	.1.3.6.1.2.1.16.15.1.1.6	6,000
${\bf hlMatrixControlAIMaxDesiredEntries}$.1.3.6.1.2.1.16.15.1.1.10	12,000
hlMatrixControlStatus	.1.3.6.1.2.1.16.15.1.1.12	active

 Table 2
 Variables under alMatrixTopNControlTable

MIB Object	OID	Value
al Matrix Top N Control Rate Base	.1.3.6.1.2.1.16.17.3.1.3	al Matrix Top NT erminals Pkts
$\overline{ \ \ alMatrix Top N Control Time Remaining }$.1.3.6.1.2.1.16.17.3.1.4	900
al Matrix Top N Control Requested Size	.1.3.6.1.2.1.16.17.3.1.7	400
alMatrixTopNControlStatus	.1.3.6.1.2.1.16.17.3.1.11	active

Command Line Options for ConfigAlMatrix.pl

ConfigAlMatrix.pl is a tool supplied with the RMON2 Traffic Profiling Datapipe. You can use this tool to create the RMON2 data source to MIB-2 ifIndex and set all the MIB objects to the values listed in Table 2 for a specified RMON2 probe. If you are using these MIB objects for other purposes, and if you do not want them set to these values, do not run this tool; instead, use the OVPI SNMP Tool or some other tool of your choice.

The following command line options are available:

ConfigAlMatrix.pl -a ProbeHost [-c CommunityString -f ConfigFile]

-a *ProbeHost* **Required**. The name of the RMON2 probe.

-c CommunityString Optional. Default: private. The Write community string profile of

the RMON2 probe. If the Write community string profile of the RMON2 probe is set to something other than private, then you must use this option to specify the probe's Write community string profile.

-f ConfigFile **Optional**. Default:

\OVPI\packages\RMON2_Traffic_Profiling_Datapipe\
RMON2_Traffic_Profiling_Datapipe.ap\alMatrixConfig.x
ml. XML configuration file for the RMON2 probe. This file contains
the MIB objects that can be modified. By default, the MIB objects
are set to the values listed in the preceding table. Modifying these

MIB objects changes the amount of data collected.

Distributed Systems

This chapter covers the following topics:

- Configuring the central server
- Configuring a satellite server
- System clocks

If you intend to run RMON2 Traffic Profiling 2.0 in a distributed environment, and you followed the advice in the installation chapter, the central server is running the report pack and each satellite server is running the report pack and the datapipe. Your next task is to set up connections with satellite server databases, configure trendcopy pull commands, and switch off hourly and daily aggregations at each satellite server.

Configuring the Central Server

Follow these steps to configure the central server:

- 1 Set up the connection with the satellite server databases:
 - a Start the Management Console.
 - **b** Click the **Systems** icon on the lower left. The System/Network Administration pane opens.
 - c Right-click the **Databases** folder. When prompted, select **Add OVPI Database**. The Add Database Wizard opens.
 - d Click Next.
 - e Type the hostname and port number for the database you want to add; click Next.
 - f Review the Summary. Repeat Steps e and e for each additional database.
 - g Click Finish when you finish adding databases.
- 2 Edit the file \$DPIPE_HOME/scripts/RMN2_Hourly.pro:
 - a Comment out blocks 1 through 4 by adding the comment sign ("#") before the word **begin** and the word **end**.
 - **b** For each satellite server, configure trendcopy pull commands from the central server by modifying the trendcopyblock:
 - Remove "#" before each line in trendcopyblock, including the begin and end lines.

- Replace SATELLITE_SERVER_1_DATABASE with the satellite server name.
- Replace THIS_MACHINE_DATABASE with the central server name.

If there is more than one satellite server, copy and modify the trendcopyblock for each satellite server.

- Save and close \$DPIPE_HOME/scripts/RMN2_Hourly.pro.
- 3 Edit this file: \$DPIPE_HOME/scripts/RMN2_Daily.pro
 - a Comment-out blocks 1 and 2 by adding the comment sign ("#") before the word begin and the word end.
 - **b** For each satellite server, configure trendcopy pull commands by modifying the trendcopyblock:
 - Remove "#" before each line in trendcopyblock, including the begin and end lines.
 - Replace SATELLITE_SERVER_1_DATABASE with the satellite server name.
 - Replace THIS_MACHINE_DATABASE with the central server name.

If there is more than one satellite server, copy and modify the trendcopyblock for each satellite server.

c Save and close \$DPIPE_HOME/scripts/RMN2_Daily.pro.

Configuring a Satellite Server

Switch off hourly and daily aggregations on the satellite server. Follow these steps:

This procedure assumes that the satellite server is not performing local reporting and that the RMON2_Traffic_Profiling module is installed.

- 1 Navigate to \$DPIPE_HOME/lib/trendtimer.sched:
- 2 Comment out the lines referencing RMN2 Hourly, pro and RMN2 Daily, pro.
- 3 Save and close \$DPIPE HOME/lib/trendtimer.sched.

System Clocks

Verify that the system clock on each satellite server is synchronized with the system clock on the central server.

Five Sample Reports

This chapter provides:

- Brief report descriptions
- A screen shot of selected reports
- Information about view options for tables and graphs

Report Descriptions

RMON2 Traffic Profiling includes 15 interactive reports. The following reports are reproduced below:

- 1 Monthly Top Ten Summary
- 2 Hourly AlMatrix Summary
- 3 Hourly AlMatrix Detail
- 4 Daily Host Summary
- 5 Daily Host Detail

Top Ten reports serve as a starting point for in-depth analysis of traffic problems. They contain the following information:

- Hourly utilization (in the hourly report only)
- Busy hour utilization (daily and monthly reports)
- A list of applications generating the most traffic, sorted from most to least
- A list of hosts generating the most traffic, sorted from most to least

ALMATRIX reports display traffic information by protocol and by source/destination host. RMON2 Traffic Profiling includes summary reports for ALMATRIX and detail reports for ALMATRIX. The summary reports aggregate data by protocol and by host devices; the detail reports contain information about the traffic between specific source and destination nodes for a selected protocol.

Host reports display traffic information by source. RMON2 Traffic Profiling includes summary reports for hosts and detail reports for hosts. The summary reports display traffic information for source nodes (listed by IP address) that generate the most traffic on the probe; the detail reports display traffic information sent by a protocol/application to a destination node for a selected source node.

Monthly Top Ten Summary

The Top Ten Summary report lists the top contributers to the total traffic on an interface. Select an interface and a time period to see the top ten hosts and protocols values with the greatest impact on the interface utilization for the time period selected.

	Probe	List		Peak H	ourly Utilization	j
Probe	Interface	Busy Hour Utilization		Month	Busy Hour Utilization	
sniffer	3	1.17		April, 2003	1.17	
				March, 2003	0.69 🔫

Hourly ALMATRIX Summary

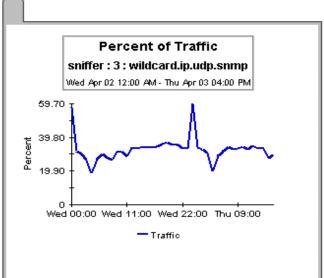

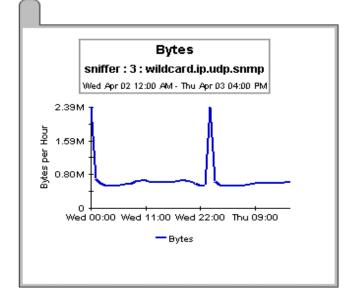

The ALMATRIX Summary Report presents a breakdown of the protocols which contribute to the total traffic on an interface. Select ar interface and a time period to see a list of protocols that had the most impact on the interface utilization for the time period selected. Select a protocol to see graphs of its historical traffic patterns.

Hourly ALMATRIX Detail

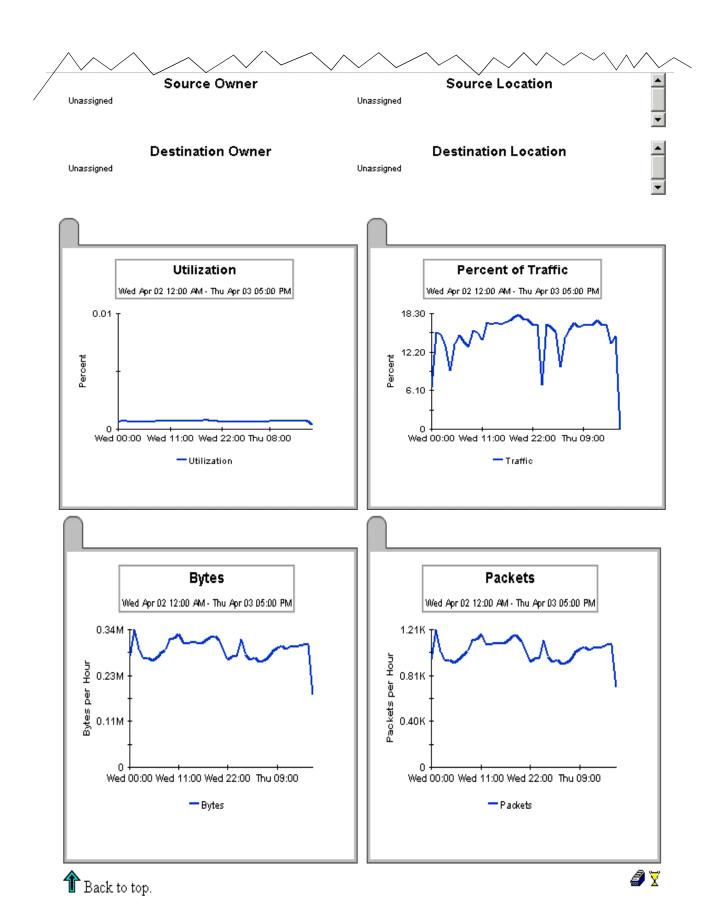

The ALMATRIX Detail Report presents a breakdown of the protocols, sources and destinations which contribute to the total traffic on an interface(data source). Select an interface and a time period to see a list of protocols that had the most impact on the interface utilization for the time period selected. Select a protocol to see a list of sources / destinations utilizing the protocol source through the selected interface. Select a source / destination combination to see graphs of its historical traffic patterns.

View Options for Tables and Graphs

There are multiple ways to view the tables and graphs in reports. Although the default view may be the view you use most of the time, you can easily change to a different view.

Report Viewer: Right-Click the Object

If you are looking at a report using Report Viewer (part of the OVPI client component), follow these steps to change your default view of a table or graph:

- 1 With your cursor on the table or graph, right-click. The options list opens.
- **2** Select one of the view options.

You can customize the following table and graph view options:

- Set Time Period alter the relative time or set an absolute time period
- Change Constraint— display or do not display grid lines
- Legend (graph only) reposition a graph's legend
- Style (*graph only*) change the type of graph displayed
- Change Max Rows display more rows of data or display fewer rows of data
- Display Data Table/Display Overlay Data Table (*graph only*) display data for every point on a graph in a spreadsheet

Web Access Server: Click the Edit Icon

If you are looking at a report using the Web Access Server, follow these steps to change your default view of a table or graph:

- 1 Specify element editing as a report reference:
 - a Click Preferences on the links bar.
 - **b** Expand **Reports** in the navigation frame.
 - c Click Viewing.
 - d Select the Allow element editing box.
 - e Click Apply.
- 2 Click on
 (the Edit icon) next to the table or graph.

You can customize the following table and graph view options:

- Max Rows display more rows of data or display fewer rows of data
- Constraints display more data or display less data
- Time Range alter the relative time or set an absolute time period
- Graph Style change the type of graph displayed

average bytes per packet

The average number of bytes per packet passed by the host or application or passed between the source/destination.

busy hour utilization

The maximum hourly average for the day. Unlike the average for the day, this value does not smooth out daily peaks and valleys. Unlike daily maximum, or peak, this value represents a relatively persistent phenomenon, not a momentary condition. Note that since busy hour is an average, actual utilization may have been well above the average for a portion of that hour.

bytes

The number of bytes passed by the host or application or passed between the source/destination.

day

The day of the year for which the information was collected.

destination

Where the application/protocol traffic is going.

host

Where the application/protocol traffic is coming from.

hour

The hour for which the information was collected.

interface

The network interface number of the probe.

month

The month for which the information is collected.

packets

The total number of packets passed by the host or application or passed through the source/destination.

percentage of traffic

The percentage of traffic attributed to the host, application, or source/destination in relation to the total traffic passing through the interface.

probe

The name of an RMON2 probe.

protocol

The name of the protocol through which the network traffic is being routed.

source

See host.

utilization

The percentage of system resources used for one hour, beginning at the listed time.
