Vendor	HBA Models	OS Supported	Notes
--------	------------	--------------	-------

Note: the minimum requirements for supporting FCAs (HBAs) are:

- The FCA vendor provides both FCA drivers and API libraries that comply with the SNIA FCA API standard.
- The driver and API libraries that came together from a specific vendor are installed and maintained as a matched set. Do not upgrade or install drivers without also upgrading or installing the corresponding API libraries that were shipped with the driver from vendor.
- HBA drivers used must be SNIA HBA API compliant.
- Emulex HBAnywhere is required with all Emulex Drivers to provide the SNIA API. The following list provides additional information about support for FCAs:
 - IBM FCAs on AIX do not require API libraries.
 - HBAs were tested with recent firmware and drivers, as of this writing. Contact your management server software representative for additional firmware and driver details.
 - Storage Visibility and Automation does not support multiple OEMs of HBAs in the same server.
 - Dual-ported HBAs differ in how they appear to the management server software and is dependent on how the vendor implements their API. Some dual-ported HBAs appear as two separate adapters.
 - Depending on the HBA Firmware and the API versions that are used to retrieve the information, Storage Visibility and Automation might report the HBA type differently from what it actually is on the HBA
