Introduction

Who are the accessibility options intended for?

The accessibility options are intended for users who encounter difficulties viewing the standard Asset Manager user interface in Windows.

What are the accessibility options used for?

The accessibility options are used at different levels:

- Modifying the visual aspect [page 11]
- Screen reader software [page 13]
- Mouseless navigation [page 19]

How to use this guide

Modifying the visual aspect

This chapter explains how to configure the Asset Manager display options in order to improve visual comfort.

Screen reader software

This chapter includes information on the following points:

- Supported screen readers [page 13]
- Configuring Asset Manager to associate it with a screen reader [page 13]
- Configuring JAWS so that it translates visual information in Asset Manager into appropriate sound information [page 14]
- Customizing the behavior of JAWS [page 15]

Mouseless navigation

This chapter explains how to navigate in the Asset Manager Windows client without using a mouse.

Conventions used in this guide

What follows is a list of the conventions that we use in this guide

Convention	Description
Java Script Code	Example of the code or command
Fixed-width characters	DOS command, function parameter or data
	format
	Portion of omitted code or command.
Note:	Informative note
Extra information	
Important:	Important information for the user
Be careful	
Tip:	Tip
User tip	
Warning:	Extremely important information for the user
Exercise caution	
Object	Asset Manager interface object: menu, menu entry, tab or button.

The following conventions are also used:

- The steps that we ask you to follow are listed in a defined ordered (in a numbered list). For example
 - 1 First step
 - 2 Second step
 - 3 Third and last step

 All illustrations and tables are numbered according to the chapter in which they appear and the order in which they appear in that chapter. For example, the title of the fourth table of chapter two will be prefixed by **Table 2-4**.

Modifying the visual aspect

To improve your visual comfort, you can modify certain options in the Asset Manager Windows client:

- 1 Start the Asset Manager Windows client.
- 2 Connect to your database.
- 3 Display the options (**Edit/ Options** menu).
- 4 Modify the display options that can improve your visual comfort. These options are located in the following branches:
 - Accessibility
 - Display
 - **Edit/ Colors**
 - Lists
- 5 Exit the Asset Manager Windows client to save these options.

2 Screen reader software

This chapter explains how to associate the Asset Manager Windows client with a screen reader.

Note:

The help on fields and links, as well as the on-line help are recognized by screen reader software.

Supported screen readers

Asset Manager uses the **MSAA** standard to act as a server.

Software using this standard can act as MSAA clients of Asset Manager.

In particular, this is the case of:

- Microsoft Narrator
- Freedom Scientific JAWS

Configuring Asset Manager to associate it with a screen reader

- 1 Start the Asset Manager Windows client.
- 2 Connect to your database.

- 3 Display the options (**Edit/Options** menu).
- 4 Modify the following options if appropriate:
 - Accessibility/ Modify the title of the application
 - Options in the Accessibility/ Screen reader tools/ MSAA branch
- 5 Exit the Asset Manager Windows client to save these options.

Configuring Asset Manager to associate it with JAWS

- 1 Start the Asset Manager Windows client.
- 2 Connect to your database.
- 3 Display the options (**Edit/ Options** menu).
- 4 Set the Accessibility/ Screen reader tools/ JAWS/ Publish the Windows classes of the application option to Yes.
- 5 Exit the Asset Manager Windows client to save these options.

This configuration makes it possible to map the Asset Manager classes and the standard Windows classes.

JAWS is thus able to correctly identify the Asset Manager classes, thus enabling the scripts that we have provided.

You can modify these scripts.

In the standard Windows terminology, a **window class** is a set of attributes that are used as a template by Windows to display a **window**.

The term **window** designates all types of objects that can be displayed: Frame, label, edit zone, etc.

Each Windows **class** is associated with a procedure that processes all objects of the same class in the same way (behavior and display).

To avoid any confusion between the terms **window** and **screen**, we will use the term **class** to designate the objects displayed by Windows.

Configuring JAWS so that it translates visual information in Asset Manager into appropriate sound information

- 1 Install JAWS on the same computer as the Asset Manager windows client.
- 2 Start a Windows Explorer.

3 Go to the JAWS sub-folder of the Asset Manager installation folder. Example:

C:\Program Files\HP\Asset Manager 9.30 xx\jaws

- 4 Copy the contents of the JAWS sub-folder (am. * files) to the Clipboard
- 5 Go to the settings sub-folder of the JAWS installation folder.
- 6 Go to one of the following sub-folders:
 - If you are using JAWS in English (Language/ JAWS Language/ **English** menu in JAWS): ENU sub-folder

Example: C:\Program Files\JAWS451\SETTINGS\ENU.

 If you are using JAWS in French (Language/ JAWS Language/ French menu in JAWS): FRA sub-folder

Example: C:\Program Files\JAWS451\SETTINGS\FRA.

7 In this sub-folder, paste the files you have copied.

Using these files, JAWS is able to recognize the nature of the information coming from Asset Manager and translate it into appropriate sound information.

Customizing the behavior of JAWS

JAWS enables you to customize the way in which it translates visual information into sound information.

Refer to the JAWS documentation for instructions.

Advanced use: JAWS scripting and class mapping

To know the name of an Asset Manager class to be processed with JAWS:

- 1 Start the Asset Manager Windows client.
- 2 Connect to the database to be configured.
- 3 Display the options (**Edit/Options** menu).
- 4 Activate the Accessibility/ Screen reader tools/ JAWS/ Register the Windows application classes in a JCF file and enter the full path of the file that will store the names of the classes displayed by Asset Manager.
- 5 Exit the Asset Manager Windows client to save these options.
- 6 Start the Asset Manager Windows client.
- 7 Connect to your database.
- 8 Display the objects whose class names you want to know.

The names and descriptions of the classes are saved in the file defined by the Accessibility/ Screen reader tools/ JAWS/ Register the Windows application classes in a JCF file option.

The saved file respects the JAWS JCF format.

Warning:

The classes are only registered once they are displayed during an Asset Manager

To re-register a class, exit then relaunch Asset Manager; The classes will register again.

Customizable files reference

- am.jcf: Mapping table (lookup table) of Asset Manager classes and standard Windows classes (as recognized by JAWS)
- am.jsm: Text of messages used in the form of variables in am.jss
- am. jss: JAWS customization script for Asset Manager
- am. jsb: Compiled version of am. jss
- am. ikm: Mapping table (lookup table) of keyboard shortcuts and script functions in am. jss

Using screen reader software

Refer to the documentation of your screen reader for details on how to use this.

Testing with Microsoft Narrator

- 1 Start the Asset Manager Windows client.
- 2 Connect to the demonstration database.
- 3 Display the options (**Edit/Options** menu).
- 4 Set the Accessibility/ Screen reader tools/ MSAA compliance/ Notify activation of an MDI window option to Yes.
- 5 Populate the Accessibility/ Modify the title of the application option.
- 6 Exit the Asset Manager Windows client to save these options.

- 7 Start Microsoft Narrator (hold down both the **Windows** and **U** keys, then start Microsoft Narrator).
- 8 Start the Asset Manager Windows client.
- 9 Connect to the demonstration database.
- 10 Perform several test manipulations with Asset Manager.

3 Mouseless navigation

This chapter explains how to navigate without using a mouse in the Asset Manager Windows client.

Conventions:

- **Button**: Graphical element of a dialog box
- Activate a button: This consists of pressing Enter or Return to execute the action corresponding to the button
- **Key**: Keyboard element
- Pressing a key: Consists simply of depressing a keyboard key

For more information on navigating in Asset Manager: Asset Manager User Interface guide, chapter First steps with Asset Manager.

The following is an example of reading tables taken from the table Mouseless navigation - General functions [page 20]:

Intended action (followed by the context)	Corresponding manipulations
Refresh caches	Keyboard: Control + F5
(Application window)	

Desired action: **Refresh the caches**.

To do this, you must first select an object in the **Application window**. Doing this defines the context of the action.

Once the focus is placed on the required context, you can perform the described manipulation: Press the **Ctrl + F5** key combination.

General functions

Table 3.1. Mouseless navigation - General functions

Intended action (followed by the context)	Corresponding manipulations
Start the Asset Manager Windows client	1 The Windows key
	2 Start/ Programs/ HP/ Asset Manager
	9.30 <language>/ Client menu</language>
Connect to an Asset Manager database	1 Start the Asset Manager Windows client
	2 Populate the Connection, Login and Password fields
	3 Activate the Open button
	4 Asset Manager sometimes displays a dialog box just after connection.
	A sound signal warns you of this.
	If this signal is not accompanied by a sound, the dialog box might not be activated.
	Press the Alt + Tab key combination to enable the dialog box.
Refresh caches	Keyboard: Control + F5
(Application window)	
Print	Keyboard: Control + P
(Application window)	
Display the online Help	Keyboard: F1
(Application window)	General menu: Help/Index
Exit the Asset Manager Windows client	Keyboard: Alt + F4
(Application window)	

Menus

Table 3.2. Mouseless navigation - Menus

Intended action (followed by the context)	Corresponding manipulations
Display the Resize and Move menu of the Asset Manager application window	Keyboard: Press and release the Alt , Down
(Application window, no window within the	arrow and Up arrow keys successively
application open)	

Intended action (followed by the context) Display the Resize and Move menu of a window within the Asset Manager application window	Corresponding manipulations Keyboard: Press and release the Alt , Down arrow and Up arrow keys successively
(Window) Select the menu bar	Keyboard: Alt
(Application window) Move from one option to another in the menu bar	Keyboard: Left arrow or Right arrow
(Menu bar option or menu entry) Display the drop-down menu of an option in the menu bar	Keyboard: Down arrow or Enter
(Menu bar option) Display a shortcut menu	Keyboard: Shift + F10 or Menu
(Window component) Move within a drop-down menu	Keyboard: Up arrow or Down arrow
(Menu entry) Display the shortcut menu enabling you to add, duplicate or delete a link appearing as a sub-tab	Displaying the shortcut menu that enables you to add, duplicate, or delete a link is not practical when the links are displayed in the form of sub-tabs.
	We recommend displaying the links in list form:
	1 Select any component of the current tab (except for the name of the tab itself)
	2 Shortcut menu: Display in list-form

Record list and detail windows

Table 3.3. Mouseless navigation - List/ Detail windows

Intended action (followed by the context)	Corresponding manipulations
Display the detail only	Keyboard: F7
(List/Detail window)	General menu: Window/ Detail only
	Shortcut menu: Detail only
Display the list only	Keyboard: F6
(List/Detail window)	General menu: Window/ List only
	Shortcut menu: List only
Display the list and the detail	Keyboard: F8
(List/Detail window)	General menu: Window/ List and detail
	Shortcut menu: List and detail

Intended action (followed by the context)	Corresponding manipulations
Refresh the information in the list and	Keyboard: F5
detail	General menu: Window/ Refresh
(List/Detail window)	
Move the separator between the list and	Keyboard:
the detail	1 Enable moving the separator bar by
(List/Detail window)	pressing the F8 key
	2 Press the Up arrow and Down arrow
	keys to move the separator bar up or down
	3 Confirm the new position of the separator
	by pressing Enter

Record lists

Table 3.4. Mouseless navigation - Main record lists

Intended action (followed by the context)	Corresponding manipulations
Create a record	Keyboard: Insert
(List zone)	
Delete a record	Keyboard: Del
(List zone)	
Select the current record in the list zone	Keyboard: Alt + F6
(List/Detail window)	Shortcut menu: Navigate to/ List
Displaying the records in the list without	General menu: Window/ Table view
tree structure	Shortcut menu: Table view
(List zone)

Intended action (followed by the context)	Corresponding manipulations
Display the drop-down list used to popu-	Keyboard: Down arrow
late a field	
(Field edit zone)	
Check or clear a checkbox	Keyboard: Spacebar
(Checkbox)	
Increment by one unit the value of a numeric field	Keyboard: Up arrow
(Number field edit zone)	
Activate the calculator	Keyboard: Alt + Down arrow
(Number field edit zone)	
Decrease the value of a numeric field	Keyboard: Down arrow
(Number field edit zone)	
Edit the value of a currency	Shortcut menu: Edit currency
(Money field edit zone)	
Set an alarm for a field	Shortcut menu: Edit alarm
(Date field edit zone)	
Insert the current date and time	Keyboard: Control + ;
(Date or date and time field edit zone)	

Table 3.11. Mouseless navigation - Links in a detail

Intended action (followed by the context)	Corresponding manipulations
Display the drop-down list used to populate a link	Keyboard: Alt + Down arrow
1000 W 111111	
(Link edit zone)	
Select a link in a choice window instead of a drop-down list	Shortcut menu: Select link
(Link edit zone)	
Display the detail of a link	Keyboard: F4
	3
(Link edit zone)	Shortcut menu: Show detail of link
(Link edit zone) Delete a link	

Wizards

Table 3.12. Mouseless navigation - Wizards

Intended action (followed by the context)	Corresponding manipulations
Launch the wizard debugger	Keyboard: Shift + F9
(Wizard being executed)	

Answer call

Table 3.13. Mouseless navigation - Answering calls

Intended action (followed by the context)	Corresponding manipulations
Answer call	Keyboard: F2
(Application window)	General menu: Helpdesk/ Answer call
Refresh the information in the help zone straight away	Keyboard: F5
(Data-entry zone)	
Refresh the information in the data-entry zone straight away	Keyboard: F5
(Help zone)	

Intended action (followed by the context)	Corresponding manipulations
Moving from one field to another in the	Keyboard: Tab
data-entry zone	•
(Data-entry zone field)	
Select the help zone	Keyboard: Alt + Right arrow
(Data-entry zone)	
Select the data entry zone	Keyboard: Alt + Left arrow
(Help zone)	
Select the Nth field of the data-entry zone (the fields are numbered 1 to 8 starting from the top)	Keyboard: $Alt + x$ or $Alt + Shift + x$ (depending on whether the shift-lock is activated) where x is a number from 1 to 8.
(Data-entry zone)	Note:
	Warning: You cannot use the numeric keypad.
Automatically populate the Type field (Data-entry zone)	Keyboard: $Ctrl + x$, where x is the shortcut character assigned to a problem type
	Note:
	Warning: You cannot use the numeric keypad.
Hide the data entry zone	Keyboard: F6
(Call-answer screen)	
Hide the help zone	Keyboard: F7
(Call-answer screen)	
Cycle between showing: The data entry zone only, the help zone only, both zones	Keyboard: F8
(Call-answer screen)	
Activate or disactivate the button to the right of the Ticket field (Open a new sub-	Shortcut menu: Sub-ticket creation mode
ticket or complete an existing ticket)	
(Call-answer screen)	

Modules

These are the same options as given in the File/ Manage modules menu.

Table 3.14. Mouseless navigation - Modules

Intended action (followed by the context)	Corresponding manipulations
Moving within the enable/disable modules	Keyboard: Up arrow or Down arrow
window	
(Enable/Disable modules window)	
Select or deselect a module	Keyboard: Spacebar
(Module name)	

Database options

These are the same options as given in the Adminstration/ Database options menu.

Table 3.15. Mouseless navigation - Database options

Intended action (followed by the context)	Corresponding manipulations
Moving within the option edit window	Keyboard: Left arrow or Right arrow
(Option)	

General options

These are the same options as given in the **Edit/Options** menu.

Table 3.16. Mouseless navigation - General options

Intended action (followed by the context)	Corr	responding manipulations
Edit the settings of an option	Key	board:
(Option)	1 Shift + Spacebar	
		To replace the current value, enter the new value directly,
	(or:
	7	To change the current value, press Up ar-
		row or Down arrow.
		To cancel any changes being made to the current option, press the Escape key
	4	To validate the current entry, press Enter
