

HP Data Protector 7.0 Virtualization Support Matrix

Version: 3.3

Date: March 2014

The combinations of Data Protector component + operating system and/or application versions listed in this support matrix are only supported by Data Protector as long as the associated operating system and/or application versions are supported by respective vendors.

Data Protector backup clients are supported to run inside guest operating systems on the following virtualization applications:

¹ Includes support for Virtual Infrastructure and vSphere components like vMotion, HA, DRS.

² Supports only the features available with vSphere 4.

³ All updates are supported.

All guest operating systems supported by the respective vendors are supported with Data Protector as long as they are listed as supported on physical hosts in the HP Data Protector 7.00 Platform and Integration Support Matrix.

Following table lists various Data Protector components supported on the guest operating systems:

- 1 Supported for HP StoreOnce Backup Systems with iSCSI and Catalyst, file devices, HP StoreOnce B6200 Backup System using Catalyst, HP Store Once Software, and file libraries only.
- 2 Valid for all applications that are listed as supported in *HP Data Protector 7.00 Platform and Integration Support Matrix* and are supported by respective vendors inside a virtual machine
- 3 Includes application integrations listed in the *HP Data Protector 7.00 Zero Downtime Backup and Instant Recovery Support Matrix for HP P9000 XP Disk Array Family*
- 4 Includes application integrations listed in the *HP Data Protector 7.00 Zero Downtime Backup and Instant Recovery Support Matrix for HP P6000 EVA Disk Array Family Using SMI-S Agent*
- 5 In case of VSS backups, the application host can be a virtual host, but the backup host for FC based arrays (EVA, XP, etc) must be a physical server. For details of the supported VSS configurations, see the *HP Data Protector 7.00 VSS Integration Support Matrix*
- 6 Support includes attached AVIO Devices
- 7 On VMware DP Agents are supported only on VMs and not on the base host, with the below exception
 1. DA on ESX 3.x and 4.x
 2. MA on ESX 4.x

The zero downtime backup and instant recovery feature in virtual environments is enabled by installing the respective array and application agents inside the virtual machines running the applications. Following is a listing of supported configurations:

¹ LAN based VCB image and VCB file backup is not supported. VCB framework does not support IPv6.

² With Disk Agent, the mount point /vmfs will be backed up as an empty directory. Using Data Protector VMware (Legacy) integration agent or Virtual Environment integration agent is the appropriate way to backup virtual machines on ESX 4.x.

³ Data Protector agents are supported only on a guest OS and not on ESXi 5.0 itself.

⁴ Backup of VMs located on SMB V3 share is not supported.
