This product includes software developed by the JDOM Project (<http://www.jdom.org>).

### Documentation Updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition of a document, go to:

**<http://h20230.www2.hp.com/selfsolve/manuals>**

This site requires that you register for an HP Passport and sign-in. To register for an HP Passport ID, go to:

**<http://h20229.www2.hp.com/passport-registration.html>**

Or click the **New users - please register** link on the HP Passport login page.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your HP sales representative for details.

## HP Software Support

Visit the HP Software support web site at: **[www.hp.com/go/hpsoftwaresupport](http://www.hp.com/go/hpsoftwaresupport)**

The web site provides contact information and details about the products, services, and support that HP Software & Solutions offers. It provides customer self-solve capabilities, and is a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the web site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Download software patches
- Manage a support contract
- Look up HP support contracts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

To find more information about access levels, go to: **[http://h20230.www2.hp.com/new\\_access\\_levels.jsp](http://h20230.www2.hp.com/new_access_levels.jsp)**

# Introduction

This document is a collection of information for all SiteScope monitors and their respective counters or metrics. The document lists all metrics that can be configured per monitor as well as versions of applications or operating systems that are supported. It should also be noted that for some applications such as databases, “instance” metrics (for example, individual database table spaces) are available but not listed in this document.

The metrics and supported versions listed here are based on the latest version of SiteScope. While most metrics and versions should be supported in previous versions, there may be some unsupported situations. Also, this is a living document and will be updated as new functionality or changes take place.

**Note:** HP is not responsible for information relating to third-party applications.

## Common Monitors - Quick Reference

Operating System Monitors	Version
<a href="#">Microsoft Windows Resources Monitor / Dynamic Microsoft Windows Resources Monitor</a>  <a href="#">Microsoft Windows Services State Monitor</a>	XP Pro, NT 4.0, 2000, 2003, 2008, 2008 R2, Windows Vista, Windows 7  XP Pro, NT 4.0, 2000, 2003, 2008, 2008 R2, Windows Vista, Windows 7  XP Pro, NT 4.0, 2000, 2003, 2008, 2008 R2
<a href="#">UNIX Resources Monitor</a>	Solaris 2.7, 2.8, 2.9, 5.10, 7, 8, 9, 10, and 10u8-11  RedHat 7.x, 8.x, 9.x, Redhat Enterprise Linux 3.x, 4.x, 5.2, 5.4, 5.5, 6.0, 6.1 AS and ES.  HP-UX 11iv1 (B.11.11) on HP 9000 series. The following versions were successfully tested: <ul style="list-style-type: none"> <li>• HP-UX B.11.11 U 9000/800 4030070275 unlimited-user license</li> <li>• HP-UX B.11.31 U ia64 4005705783 unlimited-user license</li> <li>• HP-UX 11i v3</li> </ul> AIX 5.2, 5.3, 6.1, 7.0
<a href="#">Solaris Zones Monitor</a>	Solaris 10 update 7 5/09
<p><b>Note:</b></p> <ul style="list-style-type: none"> <li>- Other Windows and UNIX monitors are available such as the Windows Perfmon monitor and the individual CPU, memory, disk, etc. monitors. For Windows, the same operating systems are supported as noted above. For UNIX, the individual monitors can work on any type of UNIX that supports SSH or telnet. For Linux, RedHat is the only one that has been tested but individual monitors should also work on any version that supports SSH or telnet.</li> <li>- Windows Server 2008 remote servers are not supported if User Account Control (UAC) is enabled.</li> <li>-Solaris zones monitor officially supports only Solaris 10 update 7, since this is the release it was tested on, but it may also work on other Solaris 10 releases.</li> </ul>	

## HP SiteScope Monitors and Metrics

<b>Application/Device Monitor</b>	<b>Platform</b> (Platforms on which the Applications run on)	<b>Version</b>
<a href="#">Amazon Web Services</a>	All	2009-11-30
<a href="#">Apache Web Server</a>	All	1.3.9, 1.3.12, 2.0.x, 2.2
<a href="#">BroadVision</a>	All	5.5, 6.0
<a href="#">Check Point Firewall</a>	All	4.1 NG
<a href="#">Cisco Works</a>	All	2000 and later
<a href="#">Citrix XenApp / Presentation Server</a>	Windows	1.0 – 4.5, XenApp 4.6, 5.0, 6.0
<a href="#">COM+</a>	Windows	2000, 2003, 2008, 2008 R2
<a href="#">DB2 8.x</a>	All operating systems with a supported JDBC driver and DB2 snapshot feature	8.x
<a href="#">F5 Big-IP</a>	Not Applicable (sits on its own hardware)	4.0
<a href="#">HP iLO</a>	HP iLO technology was developed for HP ProLiant servers. For supported platforms, see <a href="http://h18013.www1.hp.com/products/server/management/remotemgmt.html">http://h18013.www1.hp.com/products/server/management/remotemgmt.html</a>	2, 3

## HP SiteScope Monitors and Metrics

Network Services			
App.	Versions supported	Platforms Supported	Metrics
<b>Network Bandwidth</b>	NA	Any device that supports an IF-MIB.	<ul style="list-style-type: none"> <li>• Bytes in</li> <li>• Bytes out</li> <li>• Packet in</li> <li>• Packets out</li> <li>• Incoming discarded packets</li> <li>• Outgoing discarded packets</li> <li>• Incoming packets in error</li> <li>• Outgoing packets in error</li> <li>• Out queue length</li> <li>• % bandwidth utilization</li> </ul>
<b>SNMP</b>	1.0, 2.0 3.0 md5 authentication	All Platforms	Any value available via SNMP MIBs for the device. <ul style="list-style-type: none"> <li>• content match</li> <li>• status</li> <li>• value</li> </ul>
<b>SNMP by MIB</b>	1.0, 2.0 3.0 md5 authentication	All Platforms	Any value available via SNMP MIBs for the device.
<b>SNMP Trap</b>	1.0, 2.0, 3.0	All Platforms	Receive SNMP traps for specific values
<b>Formula (Bandwidth) Composite</b>	NA	All	Performs an arithmetic calculation between two SNMP metrics (i.e. network bandwidth).
<b>Ping</b>	NA	NA	Host availability
<b>DNS</b>	NA	NA	Server accepting requests Address for specific name can be found
<b>Port</b>	NA	NA	Supports both TCP and UDP (UDP requires additional configuration) Connection to port Connection time
<b>FTP</b>	NA	All Platforms	Includes ability to do content matching and compare a file to last known contents, compare a file to saved contents (and reset) as well as the following: GET file transfer time GET file transfer rate PUT file transfer time PUT file transfer rate
<b>Mail (SMTP)</b>	NA	All Platforms	Round trip – email delivery time Send time Recieve time Contant match on received email
<b>MAPI</b>	Microsoft Exchange 2003 and 2007, Outlook 2007	Windows	Round trip – email delivery time

## Advanced Monitors

App.	Versions supported	Platforms Supported	Metrics
<b>Composite</b>	NA	All	Number and percentage of items in the specified monitors and/or groups currently reporting an error, warning, or OK status. * Helpful for creating complex monitor alert logic
<b>Database Query</b>	Any database with a valid JDBC driver that supports SQL queries.	All	Varies by database. Used primarily for checking database status and response time via a query. Can be used to gather metrics via SQL queries but does not have the power and flexibility of the Database Counter monitor (see below).  * This monitor can be used to monitor DB2 on a mainframe as long as the appropriate JDBC listener is running on the mainframe.
<b>Database Counter</b>	Any database with a valid JDBC driver that supports SQL queries.	All	Varies by database. This monitor provides support for calculating deltas and rates between monitor runs and monitoring of multiple counters with a single monitor instance.
<b>Directory</b>	NA	All Platforms	<ul style="list-style-type: none"> <li>• # of files</li> <li>• Total disk space used</li> </ul>
<b>File</b>	NA	All Platforms	<ul style="list-style-type: none"> <li>• content match</li> <li>• file age</li> <li>• size</li> <li>• status</li> </ul>
<b>LDAP</b>	NA	All Platforms	<ul style="list-style-type: none"> <li>• Retrieve first entry(s)</li> <li>• Simple Query</li> <li>• False Query</li> <li>• Advanced Query</li> <li>• Authentication</li> <li>• Content verification</li> </ul>
<b>Link Check</b>	NA	NA	Checks internal and external links on a site
<b>Log File</b>	NA	NA	Alerts on matching text (eg error messages) <ul style="list-style-type: none"> <li>• Lines</li> <li>• lines/min</li> <li>• matches</li> <li>• matches/min</li> <li>• value</li> <li>• value2</li> <li>• value3</li> <li>• value4</li> </ul>
<b>Microsoft Windows Dial-up</b>	NA	NA	Confirms connection

## HP SiteScope Monitors and Metrics

<b>Microsoft Windows Event Log</b>	NA	NA	Provides alerts on new entries to the Windows events logs including the application, security, system and custom logs.
<b>News (NNTP server)</b>	NA	NA	<ul style="list-style-type: none"> <li>• number of articles</li> <li>• round trip time</li> <li>• status</li> </ul>
<b>Radius</b>	NA	NA	Authentication request <ul style="list-style-type: none"> <li>• match value</li> <li>• round trip time</li> <li>• status</li> </ul>
<b>Script</b>	NA	NA	One of the most versatile SiteScope monitors. Can be used to execute scripts, pass parameters, read script output and perform content matches. Can function either locally or on a remote system.
<b>XML Metrics</b>	NA	NA	The XML Metrics Monitor operates like many other browsable monitors: it gathers information from a source, organizes it into a browsable tree structure, and allows the user to choose which items in the tree should be monitored. It works by requesting an XML file that is accessible by an URL. The XML metrics must be in a format where each metric is a separate, unique entity in the tree/leaf format. An optional XSL facility can help with formatting.

## Server Monitors

<b>App.</b>	<b>Versions supported</b>	<b>Platforms Supported</b>	<b>Metrics</b>
<b>CPU</b>	NA	Windows, Unix, Linux	Measures CPU utilization
<b>DHCP</b>	NA	Windows, Unix, Linux	Measures if an IP address can be received
<b>Disk Space</b>	NA	Windows, Unix, Linux	Measures the percentage of disk space used

## HP SiteScope Monitors and Metrics

HP iLO	2 and 3	<p>HP iLO technology was developed for HP ProLiant servers. For supported platforms, see <a href="http://h18013.www1.hp.com/products/servers/management/re motemgmt.html">http://h18013.www1.hp.com/products/servers/management/re motemgmt.html</a></p>	<p>The list of counters depends on the monitored system, and can differ significantly from system to system. Below is a sample set of counters that are available:</p> <ul style="list-style-type: none"> <li>• system1/firmware1/date</li> <li>• system1/firmware1/version</li>   <li>• system1/cpu1/cachememory1</li> <li>• system1/cpu1/cachememory2</li> <li>• system1/cpu1/cachememory3</li> <li>• system1/cpu1/speed</li>   <li>• system1/memory1/location</li> <li>• system1/memory1/size</li> <li>• system1/memory1/speed</li>   <li>• system1/slot1/type</li> <li>• system1/slot1/width</li>   <li>• system1/fan1/DesiredSpeed</li> <li>• system1/fan1/DeviceID</li> <li>• system1/fan1/ElementName</li> <li>• system1/fan1/HealthState</li> <li>• system1/fan1/OperationalStatus</li> <li>• system1/fan1/VariableSpeed</li>   <li>• system1/sensor1 : temp1/CurrentReading</li> <li>• system1/sensor1 : temp1/DeviceID</li> <li>• system1/sensor1 : temp1/ElementName</li> <li>• system1/sensor1 : temp1/HealthState</li> <li>• system1/sensor1 : temp1/OperationalStatus</li> <li>• system1/sensor1 : temp1/RateUnits</li> <li>• system1/sensor1 : temp1/SensorType</li> <li>• system1/sensor1 : temp1/oemhp_CautionValue</li> <li>• system1/sensor1 : temp1/oemhp_CriticalValue</li>   <li>• system1/powersupply1/ElementName</li> <li>• system1/powersupply1/HealthState</li> <li>• system1/powersupply1/OperationalStatus</li>   <li>• system1/properties/enabledstate</li> <li>• system1/properties/name</li> <li>• system1/properties/number</li> <li>• system1/properties/oemhp_powerreg</li> <li>• system1/properties/oemhp_pwracap</li> <li>• system1/properties/oemhp_pwrmode</li> <li>• system1/properties/oemhp_server_name</li> <li>• system1/properties/processor_number</li> <li>• system1/properties/pstate_number</li> </ul>
--------	---------	--	---

## HP SiteScope Monitors and Metrics

<b>HP NonStop Event Log</b>	All G-Series, H-Series, and J-Series NonStop RVUs	NonStop	<ul style="list-style-type: none"> <li>• match count – number of events matched by regexp</li> <li>• records examined – number of events received from NonStop according to filter settings of monitor</li> <li>• matches/min – matches rate</li> <li>• records/min – records rate</li> </ul>
<b>IPMI</b>	Any server with IPMI 1.5 support. HP and Dell servers tested in-house.	Windows, Linux	Measures various hardware metrics even if the operating system is unresponsive. The list of available counters is vendor dependant and usually includes CPU and system temperature, system fans RPM, CPU and system voltage and more.
<b>Memory</b>	NA	Windows, Unix, Linux	Measures physical and virtual memory usage: <ul style="list-style-type: none"> <li>• physical memory used %</li> <li>• physical memory MB free</li> <li>• virtual memory used % (previously percent used)</li> <li>• virtual memory MB free (previously MB free)</li> <li>• Pages/sec</li> </ul>
<b>Memcached Statistics</b>	NA	Windows, Unix, Linux	Measures a memcached server response to a remote stats request, and stores the values returned in the response to a successful stats request: Stats (number of connections, bytes in/out, etc): <ul style="list-style-type: none"> <li>• pid</li> <li>• uptime</li> <li>• time</li> <li>• version</li> <li>• pointer_size</li> <li>• curr_items</li> <li>• total_items</li> <li>• bytes</li> <li>• curr_connections</li> <li>• total_connections</li> <li>• connection_structures</li> <li>• cmd_get</li> <li>• cmd_set</li> <li>• get_hits</li> <li>• get_misses</li> <li>• evictions</li> <li>• bytes_read</li> <li>• bytes_written</li> <li>• limit_maxbytes</li> <li>• threads</li> </ul> stats slabs (Memory statistics): <ul style="list-style-type: none"> <li>• active_slabs</li> <li>• total_malloced</li> </ul>
<b>Network</b>	NA	Windows, Unix, Linux	<ul style="list-style-type: none"> <li>• Packet errors</li> <li>• Throughput</li> <li>• Active connections</li> </ul>

## HP SiteScope Monitors and Metrics

<b>Service</b>	NA	Windows, Unix, Linux	Monitors services or processes locally or on remote systems. Monitors Windows services and processes and processes on Unix/Linux systems. Can be used to verify that specific services such as the following are running: Web server Mail FTP News Gopher Telnet
<b>Web Server</b>	NA	Windows, Unix, Linux	Measures Web Server Logs Hits Bytes Errors hits per minute bytes per minute

## URL Monitors

App.	Versions supported	Platforms Supported	Metrics
<b>URL</b>	Supports Web pages created in HTTP versions 1.0 and 1.1	NA	<p>The SiteScope URL Monitor is one of the most versatile and powerful Web monitoring tools available to Webmasters. Its core function is to attempt to reach a specified Web page to verify that it can be retrieved, but it can also be used to do the following:</p> <ul style="list-style-type: none"> <li>Check secure pages using SSL, 128 bit SSL, and client certificates</li> <li>Check for specific content on the retrieved Web page</li> <li>Check the Web page for change</li> <li>Check for specific error messages</li> <li>Check the Web page for a value</li> <li>Retrieve detailed download information</li> <li>Check XML</li> </ul>
<b>URL Content</b>	Supports Web pages created in HTTP versions 1.0 and 1.1	NA	<p>The SiteScope URL Content Monitor is a specialized variation of the URL Monitor that can match up to ten different values from the content of a specified URL. The matched values are displayed with the status of the monitor in the monitor group table and written to the monitor log. Below are the counters that are available:</p> <ul style="list-style-type: none"> <li>• age (seconds)</li> <li>• certificate expiration days remaining</li> <li>• connect time (milliseconds)</li> <li>• content match</li> <li>• deviation percentage (connect time %)</li> <li>• deviation percentage (dns time %)</li> <li>• deviation percentage (download time %)</li> <li>• deviation percentage (response time %)</li> <li>• deviation percentage (roundtrip time %)</li> <li>• dns time (milliseconds)</li> <li>• download time (milliseconds)</li> <li>• overall status</li> <li>• response time (milliseconds)</li> <li>• roundtrip time (milliseconds)</li> <li>• size (bytes)</li> <li>• status</li> <li>• total errors (errors)</li> </ul>
<b>URL List</b>	Supports Web pages created in HTTP versions 1.0 and 1.1	NA	<p>The SiteScope URL List Monitor is used to check a large list of URLs. This monitor is commonly used by web hosting providers to measure the availability and performance of their customer's web sites.</p>

## HP SiteScope Monitors and Metrics

<b>URL Sequence</b>	Supports Web pages created in HTTP versions 1.0 and 1.1	NA	<p>The SiteScope URL Sequence Monitor simulates a user's access across several pages. This is particularly useful for monitoring and testing multi-page e-commerce transactions and other interactive online applications. Below are the counters that are available:</p> <ul style="list-style-type: none"><li>• Certificate Expiration Days Remaining</li><li>• content match</li><li>• round trip time</li><li>• status</li><li>• step connect time (for steps 1-10)</li><li>• step dns time (for steps 1-10)</li><li>• step download time (for steps 1-10)</li><li>• step response time (for steps 1-10)</li><li>• step round trip time (for steps 1-10)</li><li>• total errors</li></ul>
---------------------	---	----	---

## HP SiteScope Monitors and Metrics

<p><b>Web Script</b></p>	<p>Supports scripts created in HP Virtual User Generator (VuGen) version 9.51 and earlier.</p>	<p>Web (Click and Script) Protocol Web (HTTP/HTML) Protocol</p>	<p>Each time the Web Script Monitor runs the VuGen script, it returns the transaction breakdown and performance data. The VuGen script also includes content match functionality, enabling you to check images, texts, links, and other areas of the Web site.</p> <p>In addition, the monitor's reported data can include the following measurements:</p> <ul style="list-style-type: none"> <li>• The amount of time needed to establish an initial connection with the Web server performing the transaction.</li> <li>• The amount of time taken to establish an SSL connection for HTTPS connections.</li> <li>• The time in milliseconds for the transaction to be run.</li> <li>• Whether the transaction passed or failed to connect and perform its required steps.</li> <li>• Number of pages accessed when running the transaction.</li> <li>• Number of errors that occurred during the transaction run.</li> </ul> <p>The monitor can provide early indicators of the following performance issues:</p> <ul style="list-style-type: none"> <li>• Excessive connection or retry times.</li> <li>• Slow DNS resolution or other problems with the DNS server.</li> <li>• Problems along the network or whether the server is responsive to requests.</li> <li>• Delays or failures in secured or authorized connections.</li> <li>• Overall network quality.</li> <li>• Web server delays.</li> </ul>
--------------------------	--	---	--

## EMS (Integration) Monitors

App.	Versions supported	Platforms Supported	Metrics
<b>Technology SNMP Trap Integration</b>	SNMP traps version 1 and 2	NA	This monitor enables integration of alerts from other EMS systems to SiteScope using SNMP traps. In order for achieving that, one should configure the EMS system to send snmp traps to SiteScope on each alert. The monitor will produce event (using the config file) from each matched trap.
<b>Netscout</b>	nGenius Performance manager product	NA	This monitor enables integration of alerts from Netscout nGenius Performance manager product to SiteScope.
<b>Technology Web Service Integration</b>	NA	NA	This monitor enables integration of alerts from other EMS systems to SiteScope using soap. In order for achieving that, one should implement client which will call SiteScope web service API to report events/metrics. The monitor will produce event (using the config file) from each matched call.
<b>Technology Database Integration</b>	Any database server that supports one of the JDBC drivers supplied with SiteScope or any third party JDBC driver that is placed in SiteScope's java libraries directory.	NA	This monitor retrieves data from any EMS database according to an SQL query configured by the user and is able to report that data to BSM as metrics or events depending on configuration files that is applied.
<b>Technology Log File Integration</b>		NA	The Technology Log File Integration Monitor is useful for automatically extracting data from log files and sending the data to BSM. For example, you can use this monitor to forward information from HP Network Node Manager to BSM.

# Web Services/SOA

App.	Versions supported	Platforms Supported	Metrics
<b>UDDI</b>	UDDI 2.0 servers	NA	Availability and round trip response time.
<b>Web Service</b>	WSDL 1.2, SOAP 1.1	NA	Status and response time of SOAP over HTTP web services. Status values can be any of the following: <ul style="list-style-type: none"> <li>• OK</li> <li>• unknown host name</li> <li>• unable to reach server</li> <li>• unable to connect to server</li> <li>• timed out reading</li> <li>• content match error</li> <li>• document moved</li> <li>• unauthorized</li> <li>• forbidden</li> <li>• not found</li> <li>• proxy authentication required</li> <li>• server error</li> <li>• not implemented</li> <li>• server busy</li> </ul>

# Solution Templates

<b>Host Operating System</b>		
<b>App.</b>	<b>Versions supported</b>	<b>Platforms Supported</b>
<b>Microsoft Windows</b> <b>Solaris</b> <b>AIX</b> <b>Linux</b>	XP Pro, NT 4.0, 2000, 2003, 2008 Solaris 9, 10 AIX 5.2, 5.3 RedHat 7.x, 8.x, 9.x, Redhat Enterprise Linux 3.x, 4.x, 5.2, 5.4, 5.5 AS and ES are supported.	Windows All All All

<b>HP Quality Center</b>		
<b>App.</b>	<b>Versions supported</b>	<b>Platforms Supported</b>
<b>HP Quality Center Application Server</b>	9.2 10.0	Windows and UNIX
<b>HP QTP License Server</b>	7.1.0	Windows and all UNIX
<b>HP Quality Center Server License Server</b>	9.2 10.0	Windows and all UNIX

<b>HP Service Manager</b>		
<b>App.</b>	<b>Versions supported</b>	<b>Platforms Supported</b>
<b>HP Service Manager</b>	Service Manager 7.11	Windows and UNIX

<b>JBoss Application Server</b>		
<b>App.</b>	<b>Versions supported</b>	<b>Platforms Supported</b>
<b>JBoss Application Server</b>	4.x, 5.x	All

<b>Microsoft Active Directory</b>		
<b>App.</b>	<b>Versions supported</b>	<b>Platforms Supported</b>
<b>Microsoft Active Directory</b>	Windows Server 2000 Windows Server 2003 Windows Server 2008 R2	Windows

<b>Microsoft Exchange</b>		
<b>App.</b>	<b>Versions supported</b>	<b>Platforms Supported</b>
<b>Microsoft Exchange</b>	Exchange 5.5 Exchange 2000 Exchange 2003	All
