

# HP Business Service Management

For the Windows® and Linux operating systems

Software Version: 9.13

---

## Release Notes

Document Release Date: May 2012

Software Release Date: May 2012

## Legal Notices

### Warranty

The only warranties for HP products and services are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. HP shall not be liable for technical or editorial errors or omissions contained herein.

The information contained herein is subject to change without notice.

### Restricted Rights Legend

Confidential computer software. Valid license from HP required for possession, use or copying. Consistent with FAR 12.211 and 12.212, Commercial Computer Software, Computer Software Documentation, and Technical Data for Commercial Items are licensed to the U.S. Government under vendor's standard commercial license.

### Copyright Notice

© Copyright 2005 - 2012 Hewlett-Packard Development Company, L.P.

### Trademark Notices

Adobe® and Acrobat® are trademarks of Adobe Systems Incorporated.

AMD and the AMD Arrow symbol are trademarks of Advanced Micro Devices, Inc.

Google™ and Google Maps™ are trademarks of Google Inc.

Intel®, Itanium®, Pentium®, and Intel® Xeon® are trademarks of Intel Corporation in the U.S. and other countries.

Java is a registered trademark of Oracle and/or its affiliates.

Microsoft®, Windows®, Windows NT®, Windows® XP, and Windows Vista® are U.S. registered trademarks of Microsoft Corporation.

Oracle is a registered trademark of Oracle Corporation and/or its affiliates.

UNIX® is a registered trademark of The Open Group.

## Release Notes

---

This product includes software developed by the Apache Software Foundation (<http://www.apache.org>).

This product includes software developed by the JDOM Project (<http://www.jdom.org>).

This product includes software developed by the MX4J project (<http://mx4j.sourceforge.net>).

For information about third-party or open source license agreements, see the `Open_Source_and_Third_Party_Agreements` directory on the product installation media.

## Documentation Updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition of a document, go to:

<http://h20230.www2.hp.com/selfsolve/manuals>

This site requires that you register for an HP Passport and sign in. To register for an HP Passport ID, go to:

<http://h20229.www2.hp.com/passport-registration.html>

Or click the **New users - please register** link on the HP Passport login page.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your HP sales representative for details.

# Support

Visit the HP Software Support Online web site at:

**<http://www.hp.com/go/hpsoftwaresupport>**

This web site provides contact information and details about the products, services, and support that HP Software offers.

HP Software online support provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the support web site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Download software patches
- Manage support contracts
- Look up HP support contacts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

Most of the support areas require that you register as an HP Passport user and sign in. Many also require a support contract. To register for an HP Passport ID, go to:

**<http://h20229.www2.hp.com/passport-registration.html>**

To find more information about access levels, go to:

**[http://h20230.www2.hp.com/new\\_access\\_levels.jsp](http://h20230.www2.hp.com/new_access_levels.jsp)**

## About This Service Pack

This service pack includes the following updates:

- New functionality (for details see "What's New in This Release" on page 12)
- Customer escalation fixes (for details, see "Fixed Issues" on page 104)
- Internal bug fixes

## Installation Instructions

For complete instructions on installing this Service Pack, see the relevant deployment or upgrade documentation:

- New customers should follow the instructions in the BSM 9.13 Deployment Guide.
- Existing customers upgrading from 7.x, 8.x, or 9.x should follow the instructions in the BSM 9.13 Upgrade Guide.

## Service Pack Documentation

This service pack contains the following documentation and updates:

- BSM\_9.13\_Release\_Notes.pdf (this file)
- whatsnew.pdf
- Updates to the BSM documentation set

## Updated Components Associated with this Service Pack

The following updated components have been released in parallel to BSM 9.13. They must be downloaded separately from the HP Software Support Web site.

- **Real User Monitor 9.20**

To download, access [Software updates](http://support.openview.hp.com/software_updates.jsp) (http://support.openview.hp.com/software\_updates.jsp), and click **My Updates**.

For instructions on installing Real User Monitor, see the Real User Monitor Installation Guide.

- Support span port also over GRE tunnel (for Cisco Nexus virtual switches)
- Support for SAP GUI protocol
- Bug fixes

- **SiteScope 11.20**

To download, access [Software updates](http://support.openview.hp.com/software_updates.jsp) (http://support.openview.hp.com/software\_updates.jsp), and click **My Updates**.

For instructions on installing SiteScope, see the SiteScope Deployment Guide.

- Content updates and bug fixes (for details, see the SiteScope release notes, available in the SiteScope installation directory)

- **Diagnostics 9.20**

To download, access [Software updates](http://support.openview.hp.com/software_updates.jsp) (http://support.openview.hp.com/software\_updates.jsp), and click **My Updates**.

For installation instructions, see the Diagnostics Installation and Configuration Guide.

- Content updates and bug fixes (for details, see the Diagnostics release notes, available in the Diagnostics installation directory).

- **Business Process Monitor 9.13**

To download, access the Downloads tab on the [HP Software Support web site](http://support.openview.hp.com/downloads.jsp) (http://support.openview.hp.com/downloads.jsp), and click **Software Patches**.

For instructions on installing Business Process Monitor, see the Business Process Monitor Installation Guide.

- Language support for:
  - French
  - Russian
  - Spanish
  - German
  - Simplified Chinese
  - Japanese
  - Korean
- Mobile TruClient and Ajax TruClient transactions are colored for requests sent to an application monitored by HP Diagnostics or TransactionVision.
- Addresses multiple security issues that existed in earlier releases.
- Bug fixes

---

# What's New in This Release

This section lists new features and enhancements in BSM 9.13 as well as highlights of the earlier BSM 9.1x releases. To view a full list of new features in BSM 9.1x, select **Help > What's New** in BSM, or double-click `whatsnew.pdf` from the root directory of the BSM DVD or setup directory. Alternatively, you can download the document from the [HP Software Product Manuals](#) web site.

## BSM 9.13 New Features and Capabilities

### BSM General, Platform, and Shared Services

- Support for Red Hat Linux 5.6, 5.7
- Support for VMware ESXi 5.x
- Support for Firefox ESR (Extended Support Release) 10.0
- Support for HP UCMDB Content Pack 10 (requires CP 10 patch for BSM)
- Improved log file management with new log file management tool

### End User Management

- Enhanced ALM integration with ability to export RUM data from product monitoring back to ALM for pre-production testing and the ability to export SiteScope measurements, templates, and application topology from CMDB to ALM for pre-production testing
- Improved EUM Reports:
  - “Group By” in custom reports
  - Show only locations monitoring the application in the locations filter
  - Five minute granularity in BPM Performance over Time and Metrics over Time reports

## BSM 9.12 New Features and Capabilities

### BSM General, Platform, and Shared Services

- Added support for using HP Service Health Analyzer, a new performance analytics application
- Support for Firefox 5 and 6 and IE 9
- Support for HP UCMDB 9.04 and Content Packs 8 and 9.01
- Support for System Health on Linux

### Application Performance Management

#### HP Business Process Monitor

- Enhanced reports for synthetic monitoring of mobile applications
  - Overview application mobile device users experience in comparison to non mobile device using Application Summary report
  - Overview application performance and availability distribution by device in Application Health report
  - View application performance and availability over time for different devices in BPM Performance Over Time report
  - Analyze transaction behavior according to the end-user device in Performance Analysis reports
  - View distribution of errors reported by BPM according to emulated device in BPM Error Summary
  - Filter all BPM reports according to mobile device
  - Graph different synthetic monitoring metrics per device
- Alerts by mobile device type - alerts can now be generated based on performance and availability problems by device using the existing, advanced BSM alerting mechanism
- Service Health by mobile device type - view real time synthetic performance and availability of application and its transactions for each of the different devices in BSM Service Health

#### HP Real User Monitor

- MQ protocol support that enables monitoring this common protocol used in IBM Websphere MQ product suite
- AMF (Flex) protocol support that enables monitoring this common protocol for Flex based applications
- Integration with SiteMinder single sign-on that enables original username extraction from users authenticating through SiteMinder

#### HP Diagnostics

## Release Notes

### What's New in This Release

---

- Upgraded SaaS offering including new capabilities
- Install and Monitor and Azure application using the Diagnostics .NET instrumentation agent
- Improved LDAP support with search and redirect features
- Diagnostics data fed to Service Health Analyzer (SHA)
- Extract and Display metrics from TIBCO Enterprise Message Service (EMS)
- Improved display of TIBCO ActiveMatrix Service Bus 3.1.2 thread-switching server requests
- New notifications for several conditions (availability thresholds, excessive server requests, etc.)
- Enhanced CPU metrics for Solaris Zones
- Support for Composite Type mbeans
- Probe efficiency improvements (reduction in overhead)
- New Diagnostics Data Model API document

#### **HP TransactionVision (9.10)**

- Upgrade support for 8.0x and 9.0x to 9.10
- Alerting on incomplete and late transactions (including visibility in BSM/Service Health)
- Better extensibility to support custom event sources
- New Correlation user interface:
  - Server correlation and topology features
  - Generic event format and API
  - Event collection from any .NET application using event generation definitions in a points file
- Report usability improvements in the Transaction Topology, Summary, Tracking and Over Time reports
  - Provides quick visualization of metrics, response time thresholds, flow problems and paths in reports and topologies
  - Provides enhanced tooltip information for nodes in transaction topologies such as node type, host, application server, and so on
- Platform support
  - Official WebSphere MQ Agent and Java Agent support for SUSE z/Linux
  - Official Java Agent support for TIBCO BusinessWorks and Jetty
  - Java Agent support for new versions of JBoss and Tomcat
  - Improved z/OS Agent performance for CICS and WMQ-CICS
  - z/OS Agent support for new versions of z/OS
- WebSphere MQ and Tuxedo Agent support for VMware ESX Server 4
- Support for Two-way SSL
- Enhanced tooling support for field engineers

## Release Notes

### What's New in This Release

---

- TransactionVision Java Agent POC/Supportability "Toolkit" and Improved POC supportability features
- New Processing Server utility to aid in investigation of correlation issues

## Consolidated Event and Performance Management – OMi

- New administration tool to synchronize existing topology from OM systems
- New tool to simplify the process of exchanging CA Certificates with other OM systems
- Support for OMi event generation to notify users whenever a target connected server becomes unavailable for event forwarding operations
- Enhanced Event WS query language to support additional relational expressions and additional event properties on query

## BSM 9.10 Release Highlights

### BSM Platform and Shared Services

- Direct and staged upgrade capabilities from 8.x version of HP Business Availability Center and OMi (see documentation for specific versions and upgrade paths)
- New support for Red Hat Linux as a platform
- Support for Firefox Browser
- UI localization added for Japanese, Simplified Chinese, Korean, and French

### MyBSM and Service Health Dashboards

- The Service Health dashboard provides simpler views, improving both customer experience and UI performance.
- MyBSM can now incorporate HP Diagnostics UIs
- Additional configuration options for adding external URLs/content into MyBSM and easier consumption of MyBSM components in external portals.

### Application Performance Management

- Expanded Virtualization monitoring
- New Cloud-ready APIs for End User Monitoring
- New Synthetic Monitoring of Web 2.0 applications
- New Real User Monitor protocol support
- Enhanced Diagnostics with configurable full-instance call profile capture

### Consolidated Event and Performance Management – OMi

- Powerful new dynamic performance graphing user interface
- Extended cross-domain graphing with performance data from HP Operations Manager Performance Agents, SPIs, HP SiteScope, HP Business Process Monitor, and HP Real User Monitor
- Improved event handling with time-based event automation
- Improved automation with ability to trigger run-books on event arrival
- Improved integration framework

## Release Notes

### What's New in This Release

---

- Richer Event Browser user experience
- Localization support: French, Japanese, Korean, Chinese
- Upgrade from OMi 8.1x/OMi 9.0 to 9.10 support

## BSM Content Packages for OMi

- New content pack for Microsoft Lync Server 2010
- Updated MS Exchange 2010 content pack
- Enhanced Network content including improved cross-domain correlation rules
- Solaris Zones support by Infrastructure Content Pack
- New tools added in all content packs
- Support for SPI DVD 2008/2009 and Operations Orchestration version 9.0

---

# BSM Support Matrixes

This section describes matrixes for various environments and components supported by BSM versions. For complete system requirement information, see the *HP Business Service Management Deployment Guide*.

"BSM 9.1x System Support Matrix" on next page

"Database Support Matrixes" on page 21

"BSM Component Support Matrixes" on page 23

"Verticals Support Matrixes" on page 36

"Integration Matrixes" on page 38

## BSM 9.1x System Support Matrix

Component	Brand	Version	Comments
BSM Servers – Operating Systems	Windows	<p>*Windows Server 2008 Enterprise Edition SP2 or later (64 bit)</p> <p>*Windows Server 2008 Standard Edition SP2 or later (64 bit)</p> <p>*Windows Server 2008 R2 Enterprise Edition, including all service packs (64 bit)</p> <p>*Windows Server 2008 R2 Standard Edition, including all service packs (64 bit)</p> <p>Windows Server 2003 Enterprise Edition SP2 or later (64 bit)</p> <p>Windows Server 2003 Standard Edition SP2 or later (64 bit)</p> <p>Windows Server 2003 R2 Enterprise Edition, including all service packs (64 bit)</p> <p>Windows Server 2003 R2 Standard Edition, including all service packs (64 bit)</p>	*If you are running Windows Server 2008 R2 or Windows Server 2008 SP2, User Access Control (UAC) must be disabled.
	Linux	<p>Redhat Enterprise Linux 5.3 (Intel x64 64bit)</p> <p>Redhat Enterprise Linux 5.4 (Intel x64 64bit)</p> <p>Redhat Enterprise Linux 5.5 (Intel x64 64bit)</p> <p>Redhat Enterprise Linux 5.6 (Intel x64 64bit)</p> <p>Redhat Enterprise Linux 5.7 (Intel x64 64bit)</p>	For each of the supported versions of Linux, the entire Distribution (with OEM support) and the latest recommended Patch Cluster are required.

Component	Brand	Version	Comments
BSM Servers – Web Servers	Microsoft IIS	6 7 7.5	IIS 7 and 7.5 on Windows Server 2008 only
	Apache	2.2.17	Adapted by HP for HP BSM and installed during HP BSM server installation.
BSM Client – Web Browsers	IE	Microsoft Internet Explorer 7, 8, and 9.0	
	Firefox	Mozilla Firefox 3.6, 5.0, 6.0, ESR 10.0	Windows or Linux
	Java	<b>Recommended:</b> 6 update 31 <b>Supported:</b> 6 update 18 and higher	Check the HP Business Service Management Deployment Guide and these release notes for troubleshooting information.
	Adobe	Flash Player 10.1 and higher	

## Virtualized Environments

Platform	Brand	Version
BSM 9.1x servers	VMware ESX	3.x, 4.x ESXi 5.x
	Microsoft Hyper-V	Hyper-V Server 2008 R2

## Database Support Matrixes

For complete details on database support, see the *HP Business Service Management Database Guide*.

### Software Requirements — Oracle Server

The following table lists the Oracle servers supported for working with Business Service Management. A supported option means that HP quality assurance personnel have successfully performed basic tests on that option.

Database Release - Version	System Type
Oracle 10.2 (10.2.0.4 or higher component specific release number 10.2.0.X) Enterprise Edition	64 BIT
Oracle 10.2 (10.2.0.4 or higher component specific release number 10.2.0.X) RAC Enterprise Edition	64 BIT
Oracle 11.1.0.7 Enterprise Edition	64 BIT
Oracle 11.2 (11g R2) Enterprise Edition	64 BIT
Oracle 11.2 (11g R2) RAC Enterprise Edition	64 BIT

- It is strongly recommended to apply the latest critical Oracle patches per your operating system. For details, consult the Oracle documentation.
- Consult the Oracle documentation for supported platforms.
- The Oracle Partitioning option must be enabled.

### Examples of Tested Deployments — Oracle Server

The following table details the deployment environments that have been rigorously tested by HP quality assurance personnel.

Database Release - Version	System Type	Operating System
Oracle 11.2 (11g R2) Enterprise Edition	64 BIT	Linux Enterprise Edition RHEL 5
Oracle 11.2 (11g R2) RAC Enterprise Edition	64 BIT	Linux Enterprise Edition RHEL 5
Oracle 10.2.0.5 Enterprise Edition	64 BIT	Linux Enterprise Edition RHEL 5
Oracle 11.2 (11g R2) Enterprise Edition	64 BIT	Solaris 10

## Software Requirements — Microsoft SQL Server

The following table lists the Microsoft SQL Servers supported for working with Business Service Management. A supported option means that HP quality assurance personnel have successfully performed basic tests on that option.

Database Release Version	System Type	Service Pack
Microsoft SQL Server 2008 R2 Enterprise Edition	64 BIT	Service Pack 1
Microsoft SQL Server 2008 Enterprise Edition	32 BIT	Service Pack 1
Microsoft SQL Server 2008 Enterprise Edition	64 BIT	Service Pack 1
Microsoft SQL Server 2008 Enterprise Edition	32 BIT	Service Pack 2
Microsoft SQL Server 2008 Enterprise Edition	64 BIT	Service Pack 2
Microsoft SQL Server 2005 Enterprise Edition	32 BIT	Service Pack 3
Microsoft SQL Server 2005 Enterprise Edition	64 BIT	Service Pack 3
Microsoft SQL Server 2005 Enterprise Edition	32 BIT	Service Pack 4
Microsoft SQL Server 2005 Enterprise Edition	64 BIT	Service Pack 4

- Only supported service packs should be installed. Patches newer than the installed service pack are also supported.
- Consult the Microsoft documentation for supported platforms.

## Examples of Tested Deployments — Microsoft SQL Server

The following table details the deployment environments that have been rigorously tested by HP quality assurance personnel.

Database Release Version	System Type	Service Pack	Operating System
Microsoft SQL Server 2008 R2 Enterprise Edition	64 BIT	Service Pack 1	Windows 2008 R2 Enterprise Edition Service Pack 1 (64-bit)
Microsoft SQL Server 2008 Enterprise Edition	32 BIT	Service Pack 1	Windows 2008 Enterprise Edition Service Pack 1
Microsoft SQL Server 2008 Enterprise Edition	64 BIT	Service Pack 1	Windows 2008 Enterprise Edition Service Pack 1 (64-bit)

## BSM Component Support Matrixes

In each Table, √=supported, X=not supported.

## Business Process Monitor 9.13 System Support Matrix

For complete BPM support information, see the BPM Administration Guide and readme.

Business Process Monitor – Operating Systems	Microsoft Windows Vista SP2 32 bit Microsoft Windows 7 32 bit Microsoft Windows XP Professional SP3 32 bit Microsoft Windows Server 2008 SP2 (32/64bit), R2 (64bit) Standard and Enterprise Editions Microsoft Windows Server 2003 SP2, SP2R2 32 bit Standard and Enterprise Editions
---	---

## Business Process Monitor Compatibility Matrix

For each BPM version, the latest supported VuGen version is mentioned. All previous versions of VuGen are supported as well.

Compatibility Matrix	HP Business Service Management 9.x	HP Business Availability Center 8.x	HP Business Availability Center 7.5x	HP Business Availability Center 7.0
BPM 9.13 (LR Replay 11 SP 3)	√ (Recommended)	√	√	√
BPM 9.03 (LR Replay 11 SP 3)	√ (Recommended)	√	√	√
BPM 9.02 (LR Replay 11 SP 1)	√ (Recommended)	√	√	√
BPM 9.01 (LR Replay 9.5 SP 2)	√ (Recommended)	√	√	√
BPM 9.00 (LR Replay 9.5 SP 2)	√	√	√	√
BPM 8.03 and later (LR Replay 9.5 SP2)	√	√ (Recommended)	√	√
BPM 8.02 (LR Replay 9.5)	√	√ (Recommended)	√	√
BPM 7.5x (LR Replay 9.1)	√	√	√ (Recommended)	√
BPM 7.0 (LR Replay 9.0)	√	√	√	√ (Recommended)

## Business Process Monitor/QuickTest Professional (QTP) Compatibility Matrix

Compatibility Matrix	Business Process Monitor 9.0x	Business Process Monitor 8.03, 8.04, 8.05	Business Process Monitor 8.02	Business Process Monitor 7.5x	Business Process Monitor 7.0
QTP 11.0	√	√	√	X	X
QTP 10.0	√	√	√	X	X
QTP 9.5	X	X	√	√	X
QTP 9.1/2	X	X	X	√	√
QTP 9.0	X	X	X	√	√
QTP SAP R/3 7.31	X	X	X	√	√

**Note:** HP Quick Test Professional 10.0 can be obtained from HP BTO Software Web site. The link is accessible from [HP QuickTest Professional software page](#) (look for HP QuickTest Professional 10.0 Evaluation). You can also use the [direct link](#).

## Business Process Monitor Protocol Support Matrix

The following table describes the BPM 9.13 supported protocols.

Protocol	Windows
.NET	√
AJAX	√
AJAX TruClient	√
C VUser	√
Citrix 1.8	√
COM/DCOM	√
CORBA-java	√
DB2 CLI	√
DNS	√
EJB	√

Protocol	Windows
Flex	√
FTP	√
IMAP	√
I-mode	√
Informix	√
Jacada	√
JAVA over HTTP	√
JAVA Record\Replay	√
Java VUser	√
JavaScript VUser	√
JMS	√
LDAP	√
Mobile App (HTML/HTTP),	√
Mobile TruClient	√
MSSQL Server	√
Multi protocol Web	√
ODBC	√
Oracle (2-tier)	√
Oracle NCA	√
PeopleSoft – 8	√
POP 3	√
RDP	√
Real	√
RMI-java	√
SAP Click and Script	√
SAP GUI	√
SAP Web	√
Siebel – Web	√

Protocol	Windows
Siebel DB2 CLI	√
Siebel MSSQL	√
Siebel Oracle	√
Silverlight	√
SMTP	√
SOAP	√
Sybase CtLib	√
Sybase DBlib	√
Terminal Emulation [RTE]	√
Tuxedo 6	√
Tuxedo 7	√
VB VUser	√
Voice XML	√
WAP	√
Web [HTTP/HTML]	√
Web Click and Script	√
Windows sockets	√

**Note:** Some of the protocols require the installation of additional software components and therefore are platform dependent.

## Supported protocols via QTP add-ins:

Web
QuickTest Professional Oracle Add-in (Web-based & Java-based Oracle applications)
QuickTest Professional Add-in for SAP Solutions (Windows-based & Web-based SAP solutions)
QuickTest Professional Siebel Add-in
QuickTest Professional Web Services Add-in
QuickTest Professional PeopleSoft Add-in
QuickTest Professional Java Add-in

**Note:** Starting from BPM 7.50, QTP 9.5 is supported with the following new protocol: Power Builder Add-in

## System Health Support

BSM 9.13 uses System Health for BSM 9.12, which is based on SiteScope 11.10 + System Health for BSM 9.12 patch.

For general instructions on installing System Health, see the BSM Platform Administration Guide. To install System Health for BSM 9.12, install System Health using SiteScope 11.10, then install the System Health for BSM 9.12 patch on top. All components and patches can be downloaded separately from the HP Software Support patches download site, accessed from the [HP Software Support](http://www.hp.com/go/hpsupport) web site (<http://www.hp.com/go/hpsupport>).

## SiteScope 11.1x System Support Matrix

SiteScope – Operating Systems	Windows	<p>32-bit Support:</p> <ul style="list-style-type: none"> <li>• Microsoft Windows 2003 SP1, SP2 Standard/Enterprise Edition</li> <li>• Microsoft Windows Server 2003 R2 SP1, SP2 Enterprise Edition</li> <li>• Microsoft Windows Server 2008 SP2 Standard/Enterprise Edition (supported on Windows Server 2008 SP2 Standard/Enterprise Edition host and Hyper-V guest (32 or 64-bit) hosted on Windows Server 2008 R2)</li> </ul> <p>64-bit Support:</p> <ul style="list-style-type: none"> <li>• Microsoft Windows Server 2003 SP2 Standard/Enterprise Edition</li> <li>• Microsoft Windows Server 2008 SP2 Enterprise Edition</li> <li>• Microsoft Windows Server 2008 R2 Enterprise Edition (supported on Windows Server 2008 R2 host with Hyper-V enabled, and on Windows Server 2008 SP2 (32 or 64-bit) guests on this host and on host without Hyper-V; also supported on Windows 2008 R2 Hyper-V guests)</li> <li>• Microsoft Cluster 2003 (for SiteScope Failover installation only)</li> </ul>
	Solaris	<ul style="list-style-type: none"> <li>• Solaris 9 (32-bit) with latest recommended patch cluster</li> <li>• Solaris 10 (32 or 64-bit) with latest recommended patch cluster</li> </ul>

## BSM 9.1x/HP Operations Manager (HPOM) Support Matrix

HPOM Version	Required Patches	
HP Operations Manager for Windows	8.16	Server Patch OMW_00090 or higher  Accessories Patch OMW_00092  HPOM Server Node: One of the following HP Operations Agent versions: <ul style="list-style-type: none"> <li>• HP Operations Agent 8.60 + Hotfix QCCR1A100254</li> <li>• HP Operations Agent 8.60.501</li> <li>• HP Operations Agent 11.00</li> </ul>
	9.00	HPOM Server Node: One of the following HP Operations Agent versions: <ul style="list-style-type: none"> <li>• HP Operations Agent 8.60 + Hotfix QCCR1A100254</li> <li>• HP Operations Agent 8.60.501</li> <li>• HP Operations Agent 11.00</li> </ul>
HP Operations Manager for UNIX or Linux	9.10	PHSS_41692 or higher for HPOM 9.10 for HP-UX  OML_00034 or higher for HPOM 9.10 for Linux  ITOSOL_00748 or higher for HPOM 9.10 for Solaris  HPOM Server Node: One of the following HP Operations Agent versions: <ul style="list-style-type: none"> <li>• HP Operations Agent 8.60 + Hotfix QCCR1A100254</li> <li>• HP Operations Agent 8.60.501</li> <li>• HP Operations Agent 11.00</li> </ul>

If you are currently using HPOM for UNIX or HPOM for Windows in an HPOM manager of manager scenario you can use the following strategies to integrate information from these installations to BSM:

- Topology Synchronization
  - With an OMi-ready SPI on HPOM, use Configuration Upload to move topology information to a supported version of HPOM. Then use Basic or Dynamic Topology Synchronization to synchronize with BSM.

- Use other discovery technologies such as HP Data Flow Management (formerly known as the HP Discovery and Dependency Mapping) using the Data Flow Probe.
- Event Forwarding
  - Events may be sent from an HPOM system to a supported version of HPOM, and from there to BSM. Note that events can only be related to CIs and set ETIs if they contain corresponding information, and if the CIs exist in the RTSM.

## BSM 9.1x/HP Operations Agent Support

HP supports monitoring of BSM servers with the following versions of HP Operations agents:

- 8.60.051 or higher
- 11.02.011 or higher

## SiteScope 11.1x/HPOM Integration Matrix

BSM 9.00, 9.01, 9.1x	Population, federation, and push synchronization from BSM to HP UCMDB (CMS)	9.01 or later

## UCMDB Content Pack Support

	CP 10.01	CP 10 (requires patch for BSM*)	CP 9.01	CP 9	CP 8
BSM 9.12, 9.13	X	√	√	X	√
			<p><b>Limitation:</b> There are incompatibility issues between LyncServer model provided by OMi 9.12 and CP 9.01. The following errors can appear while deploying the CP on top of BSM: “Action is not allowed, cannot update anything in class created by user but updated by factory”. If the errors are related to classes that are part of LyncServer package or Exchange package, they can be ignored and OMi content packs continue working correctly after CP deployment.</p>		

\* **CP 10 patch for BSM** is available on the HP Software Support patches download site, accessed from the [HP Software Support](http://www.hp.com/go/hpssoftwaresupport) web site (<http://www.hp.com/go/hpssoftwaresupport>). Search for: **UCMDB 9.04 CP10 Patch** (file name **BAC\_00777.zip**)

**Note:** Future Content Pack versions may also be supported. See the relevant Content Pack documentation for details, or check the SSO site for updated [support matrix information](#).

## BSM/HP Operations Orchestration (OO) Integration Matrix

Integration Matrix	OO 9.0	OO 7.6	OO 7.51
BSM 9.0x, 9.1x	√	√ (with hotfix hf07162010_7.60)	√ (with hotfix hf04222010_7.51)

## BSM/Release Control (RC) Integration Matrix

BSM integration with Release Control requires HP Universal CMDB. For support details, see the Release Control documentation.

---

## Notes and Limitations

Problems and limitations are identified with a Change Request number (QCCRxxxxxxx). Use this number when looking for more information about the problem on the [HP Software Support](http://www.hp.com/go/hpsoftwaresupport) web site (<http://www.hp.com/go/hpsoftwaresupport>), or when communicating with your HP Support representative.

To see the most updated status of limitations listed in this section, or generally to view a list of known problems for a specific product and/or version, on the [HP Software Support](http://www.hp.com/go/hpsoftwaresupport) web site click the Self-solve tab, select **Include related subproducts**, select product, version, and operating system, select only **Known Problems** in the **Document types** area, and click **Search**. You can also search for a specific CR using the keyword box at the top of the Self-solve page.

## General and Deployment

**Capacity Calculator:** The capacity calculator Excel sheet, BSM\_9\_Deployment\_and Capacities.xls, can be found in the Documentation folder in the main BSM installation DVD. The latest version can also be downloaded from the [HP Software Product Manuals site](http://www.hp.com/go/hpsoftwaresupport).

You use this Excel sheet to input information regarding the scope of your deployment (applications, number of users, expected data) and the capacity calculator then calculates the required hardware and determines the size of your deployment. You then use this information to determine your hardware requirements and deployment configuration. You can upload the data from the capacity calculator Excel sheet while running the Setup and Database Configuration Utility in the Server Deployment page. For details, see "Using the Capacity Calculator" in the HP Business Service Management Deployment Guide.

---

**Authentication:** BSM's default authentication strategy is Lightweight Single Sign-On (LW-SSO). When LW-SSO is enabled, you must use a fully qualified domain name (FQDN) to access BSM. This will enable integration among supported HP applications with a Single Sign-On manager, as well as working with BSM RTSM. If you are not able to provide an FQDN, it is still possible to use IP addresses for LW-SSO-trusted hosts. For details on working with IP addresses, see "Authentication Strategies" in the Platform Administration guide.

---

**Temporary Internet Files:** When logging into BSM for the first time after upgrading, delete the browser's temporary Internet files. This should be done on each browser that accesses BSM.

---

**Skype Add-ons:** An Internet Explorer exception error message is thrown inside BSM pages (usually on login page or in MyBSM), indicating Operation aborted. To resolve this issue, remove

the Skype add-ons from your client. For further details, see <http://support.microsoft.com/default.aspx/kb/927917>.

---

**VMWare Synchronization Issue Resolved (QCCR1157087):** There is a known issue in VMWare in which the clock of the virtual machine can jump up to 60 seconds. This caused synchronization issues with BSM in the past, but has now been resolved. BSM now uses the clock of the physical machine when VMWare is being used.

---

**Clarification of Database Names (QCCR1168756):** The Database Guide mentions the OMI database (page 109), but this database is referred to in the application using other names as well. The following terms all refer to the identical database: Event Schema = OPR Schema = Operations Management Database.

---

**Rollback to 9.10:** Rollback from a BSM 9.1x service pack to BSM 9.10 is not supported.

---

**Upgrade Wizard may hang when pressing Back in the OPR Database Settings dialog (QCCR1A142249)**

**Description:** The Upgrade Wizard may hang when pressing the Back button in the OPR Database Settings dialog.

**Workaround:** Stop the Upgrade Wizard and restart it. Using the Next button, progress to the dialog that you want to edit and continue with the upgrade.

---

**Customized version of httpd-ssl.conf file might be overwritten. (QCCR1141178)**

**Description:** If BSM is configured for secure access (using Apache + SSL), BSM uses a customized version of the file `httpd-ssl.conf`. This file might be overwritten during the upgrade with a standard version of the file, breaking the configuration.

**Workaround:** Before upgrading, backup the customized file `<HP BSM root directory>\WebServer\conf\extra\httpd-ssl.conf`. Then copy it back to its original location after completing the installation.

---

**Applets fail with an unexpected handshake message (QCCR1144883)**

**Description:** In environments in which the BSM server requires a client certificate, applets using Java 1.6.0\_20 may fail with an unexpected handshake message. This is a known issue from Sun (Oracle).

**Workaround:** Add the parameter `-Dsun.security.ssl.allowUnsafeRenegotiation=true` to the Java client.

---

**Multiple prompts to enter credentials (QCCR1145194)**

**Description:** When using Java version 1.6.19 and higher in a secure environment (SSL) using basic authentication, you are prompted to enter credentials for each applet every time the applet is loaded. This is a known issue by Sun (Oracle).

**Workaround:** As suggested by Sun (Oracle): When each applet loads the first time, select **Remember password**. There is no security concern with this workaround since the applets are also protected by the browser and you are prompted for your credentials once every time you log into BSM through the browser using basic authentication.

---

#### **High Availability Controller cannot move services (QCCR1146345)**

**Description:** If there is a problem with one of the marble\_\* processes (for example, one of the processes cannot start), you must disable the marble\_supervisor process. If this process is not disabled, the High Availability Controller (HAC) cannot move the process' services (such as the DASHBOARD service that controls Service Health) to another Data Processing Server if there is a problem with the primary server.

**Workaround:** Disable the marble\_supervisor process. HAC will move DASHBOARD service to another DPS.

---

#### **Restart of BSM may be required after database outage (QCCR1146504)**

**Description:** If the management database was down or unreachable and the connection has been restored, you may have to restart BSM.

**Workaround:** Restart BSM when the management database is available again.

---

#### **Adding additional Gateway servers with differing paths causes login failures (QCCR1147337)**

**Description:** If two Gateway servers are installed onto different drive paths, for example, one was installed onto the C:\ drive and the other onto the E:\ drive, BSM may not be able to be accessed.

**Workaround:** Create a duplicate path on the C:\ drive by copying `E:\<HP BSM root directory>\conf\settings` to `C:\<HP BSM root directory>\conf\settings`.

---

#### **Upgrade will fail if IDM-SSO is enabled in the source environment. (QCCR1158648)**

**Description:** If you are using IDM-SSO, upgrade will fail if IDM-SSO is enabled in the source environment but not yet configured in the target environment.

**Workaround:** Disable IDM-SSO on the BSM Gateway Server before running the configuration upgrade in the target environment. To do so:

1. Log into the JMX console (<http://<Gateway Server name>:8080/jmx-console>) and search for the SSO service (**service=SSO**).

2. Locate the **setSingleSignOnMode** operation and in the ParamValue box, type **Lightweight**.
3. Click **Invoke**.

IDM-SSO can be re-enabled after BSM 9.10 is up and running from within BSM (**Admin > Users and Permissions > Authentication Management wizard**).

---

### **View Size (QCCR1161961)**

**Description:** To enhance performance, in BSM 9.10 there is a view-size limit. As a result, if you created an extremely large view in BAC 8.x, the view may not be supported by the RTSM in 9.10 or later.

**Workaround:** Contact HP Support for assistance in creating new views to suit your needs.

---

### **Staging Data Replicator (SDR) issues (QCCR1163137)**

- The procedure for unsubscribing the SDR should use the following scripts rather than the Nanny JMX console:

**`/opt/HP/BsmSDR/scripts/run_hpbsmsdr.sh start/stop`**

- Nanny manager JMX console will not show the correct SDR process status.

## **Platform**

**Platform Administration (Windows Server 2008):** On Windows Server 2008 R2, if the Business Service Management root directory is defined as a shared folder, when attempting to open Business Service Management in a browser to log in, an HTTP server error is displayed and it is not possible to log into the application.

To work around this limitation, grant full control for IUSR account and IIS\_IUSRS group on Business Service Management root directory (by default, called HPBSM). Then restart IIS using `iisreset /RESTART`.

---

**Authentication:** When HP Business Service Management is installed with an Oracle Database and User Synchronization enabled with an LDAP Active Directory server, ensure that you login to HP Business Service Management with the correct-case UID (uppercase or lowercase), as configured on the LDAP server. This is because while the Oracle Database is case-sensitive, the LDAP Active Directory is not case sensitive, and logging in with an incorrect case UID can create undesirable results.

For example, if a user called **testuser** exists on the LDAP Active Directory server and logs into HP Business Service Management, he is automatically created as HP Business Service Management user **testuser**, who can be assigned permissions in the HP Business Service Management User Management interface. If you then login to HP Business Service Management as **Testuser**, the LDAP Active Directory server sends an acknowledgement that the user exists (because Active Directory is not case sensitive) and he is allowed entry to HP Business Service Management. However, since the Oracle Database does not identify this user as **testuser** (because the Oracle

Database is case sensitive), the user **Testuser** is treated as a new user, without the permissions that were assigned to **testuser**.

---

**NLS\_LENGTH\_SEMANTICS:** The recommended setting for Oracle parameter NLS\_LENGTH\_SEMANTICS is the default setting of BYTE; setting this value to CHAR may affect database performance.

---

**Infrastructure Settings:** Changes to infrastructure settings are not included in the Audit Log.

---

**Schema Creation:** You cannot create a schema that starts with a digit.

---

### **Errors when loading pages with Adobe Flex components. (QCCR1140830)**

**Description:** If your environment contains an SSL Offloader such as reverse proxy or load balancer where SSL is terminated and traffic is forwarded to BSM web server unencrypted, you may see errors when loading pages with Adobe Flex components (for example, Application Status report in EUM, or 360 View page in MyBSM).

The error in the topaz\_all.ejb.log would look like this:

```
flex.messaging.security.SecurityException: Secure endpoint  
'/messagebroker/amfsecure' must be contacted via a secure protocol
```

#### **Workaround:**

1. Replace the file: **<HPBSM root directory>\AppServer\webapps\site.war\WEB-INF\flex\services-config.xml** with the following file found in the same directory: **services-config\_for\_reverse\_proxy\_env.xml**
2. Use this new **services-config.xml** to replace the **services-config.xml** files found in each of the following directories on the BSM Gateway Server:  
**<HPBSM root directory>\AppServer\webapps\ tvb.war\WEB-INF\flex**  
**<HPBSM root directory>\AppServer\webapps\bpi.war\WEB-INF\flex**
3. Replace the file: **<HPBSM root directory>\AppServer\webapps\opr-admin-server.war\WEB-INF\flex\services-config.xml** with the following file found in the same directory: **services-config\_for\_reverse\_proxy\_env.xml**
4. Replace the file: **<HPBSM root directory>\AppServer\webapps\OVPM.war\WEB-INF\flex\services-config.xml** with the following file found in the same directory: **services-config\_for\_reverse\_proxy\_env.xml**
5. Replace the file: **<HPBSM root directory>\AppServer\webapps\opr-console.war\WEB-INF\flex\services-config.xml** with the following file found in the same directory: **services-config\_for\_reverse\_proxy\_env.xml**
6. After replacing services-config xml files in all locations, restart BSM.

**Downtime notifications may not be sent if the Data Processing Server is down (QCCR1I44964)**

**Description:** If the Data Processing Server is down for any reason, notifications of downtime starting and ending may not be sent. Notifications sent to recipients regarding downtimes are configured during downtime creation.

**Workaround:** None.

---

**Adobe Flash plugin errors in Firefox 3.6.4 or above (QCCR1I55463)**

**Description:** When working with BSM in Firefox 3.6.4 or above, Firefox may display one of the following error messages:

- The Adobe Flash plugin has crashed.
- Adobe Flash Player <version>. An ActionScript error has occurred. Error #1502: A script has executed for longer than the default timeout period of 15 seconds.

This is due to a known problem with the browser's "out-of-process plugins" (OOPP) crash protection feature (for details, see [https://bugzilla.mozilla.org/show\\_bug.cgi?id=574905](https://bugzilla.mozilla.org/show_bug.cgi?id=574905)).

**Workaround:** To prevent this behavior, go to about:config and set all dom.ipc.plugins.enabled.\* preferences to false. This prevents the "plugin-container" process from running, and all plugins will run within the Firefox browser process. For details, see [http://kb.mozillazine.org/Plugin-container\\_and\\_out-of-process\\_plugins#Disabling\\_crash\\_protection](http://kb.mozillazine.org/Plugin-container_and_out-of-process_plugins#Disabling_crash_protection).

---

**Java applets may fail to load (QCCR1I57396)**

**Description:** Java applets may fail to load intermittently.

**Workaround:** If a Java applet in BSM fails to load, clear your Java client cache:

1. In the Windows Control Panel, click **Java**.
  2. On the General tab, select **Settings > Delete Files**.
- 

**Firefox 3.6.14 is not supported (QCCR1I58176).**

**Description:** Due to a problem with applets in Firefox 3.6.14, BSM 9.10 does not work properly in this environment.

**Workaround:** Do not use BSM with Firefox 3.6.14. This specific version of Firefox fails to load applets. The problem does not occur in other versions of Firefox (for example version 3.6.15).

---

**Applets fail to load when "Internet Explorer Enhanced Security" is enabled (QCCR1I59140)**

**Description:** In some environments, certain applets fail to load when **Internet Explorer Enhanced Security** is enabled on the client machine (for example, the **LDAP Group Mapping Wizard**).

---

**Workaround:** Disable Internet Explorer Enhanced Security on the client machine (for example, Control Panel > Add/Remove Programs > Add/Remove Windows Components > scroll down to **Internet Explorer Enhanced Security Configuration** and uncheck the box).

---

**Login page does not load if accessing through LB in separate domain from BSM (QCCR1160724)**

**Description:** When connecting to BSM using an FQDN, you still see the following error in the login screen: The HP Business Service Management URL must include the Fully Qualified Domain Name (FQDN).

**Workaround:** Retype the HP Business Service Management URL in the address bar, and check if there is a DNS resolution for Load Balanced virtual IPs from the BSM gateways.

## System Health

**Connection Protocol:** When connecting System Health to your BSM and database servers, SSH is the preferred protocol, and should be used whenever possible.

---

**Log levels:** Some log level monitors may appear as not working.

---

**BLE Main Flow monitor is not yet functional (QCCR1159479)**

**Description:** When you try to check the monitor Application Engines→Dashboard Engine→"BLE Main Flow", it fails with the error "no internal monitor result found".

**Workaround:** None.

---

**System Health for BSM 9.10 does not support WMI connections to the BSM and database servers (QCCR1162533)**

**Description:** System Health for BSM 9.10 does not support WMI connections to the BSM and database servers. Monitors fail due to connection problems.

**Workaround:** When setting up System Health, complete the steps without connecting to the servers. Then, from within System Health, access the SiteScope Dashboard, and configure your server connections from there.

---

## Integrations

**General:** In you are setting up a BSM integration where external clients are coming from the Internet and accessing the BSM environment through a firewall, reverse proxy, or load balancer, you may need to create a special rule or listener for the integrating application (such as OO, SiteScope, NNM, or Diagnostics) to allow external user access to servers inside the network.

---

**NNMi Integration:** Configuring topology integration between NNMi and BSM requires the configuration of credentials to log into the RTSM. You define RTSM users in the UCMDDB Admin application, not in BSM itself. To configure an NNMi integration user, go to `http://<BSM_server>:21212/ucmdb-ui/applet/applet.jsp`, and then select **Managers > Administration > Users and Roles**. Define the name and password of an integration user.

For NNMi, the user at minimum needs to have the following roles:

- CmddbOpenApiImpact
- CmddbOpenApiQuery
- CmddbOpenApiUpdate

The default credentials are `admin/admin`.

**Note:** For the above roles to function, a patch on top of BSM 9.12 is required. Until this patch is applied, the user at minimum needs to have the Admin role.

---

**Release Control (RC) Integration:** If you are integrating BSM with Release Control (RC) 9.11 or earlier, perform the following procedure to solve an issue that prevents correct integration of RC Change Requests into the Changes and Incidents tab in Service Health.

1. Navigate to the Adapter Management page and in the Resources pane select **RcChangeAdapter > Configuration Files > convertFields.properties**.
2. Append the following line to the end of the file: **urgency=urgency**
3. Create a new properties file called `RcChangeAdapter/urgency.properties` and add the following lines:
  - `# File format:`
  - `# RC urgency value=uCMDDB urgency value`
  - `Critical=1_critical`
  - `High=2_high`
  - `Normal=3_average`
  - `Low=4_low`
  - `#UNKNOWN= there is no available value in uCMDDB: 'it_process_urgency_enum'`
4. Save the file.

If the integration does not work after following the above procedure, contact HP Customer Support.

---

**HPOM Integration:** More than one HPOM (formerly HP OVO) monitor can be created on the same port using the Copy function, resulting in duplicate HPOM events. In such cases, delete the copied monitor. Note that the HPOM Event monitor is not available when SiteScope 11.00 is connected to

BSM 9.x, unless the monitor was created in an earlier version of SiteScope that was upgraded to SiteScope 11.00.

---

**EMS Integration:**

- The maximum size of an expression in the EMS Integration configuration file is 4000 characters.
  - An EMS monitor may not find its configuration file when upgrading the SiteScope version. In such cases, manually copy the contents of the configuration file to the EMS monitor configuration in the user interface.
- 

**In the BSM-Diagnostics integration (Admin>Diagnostics) an error occurs on short-name and there is no way to re-enter the FQDN (QCCR1162229)**

**Description:** You should use the FQDN when registering the Diagnostics Server with BSM. However if you entered a non-FQDN for the Diagnostics Server you could get stuck in a registration problem loop.

**Workaround:** Use the URL below and substitute the “topazhost” name in the URL with the FQDN of the BSM 9.1x Gateway Server to clear the Diagnostics Configuration page in BSM:

```
http://topazhost/opal/uibridge/action/registration.do?action=set_
registration&customer_name=Default%20Client&opal_protocol=&opal_
port=&opal_full_host=
```

## Reports and Reporting

**PDF:** It is not possible to search charts inside reports exported to PDF (since the charts are saved as images). It is possible to search inside tables.

---

**Export:** It is not possible to export chart reports to Excel and XML (CSV is supported).

---

**TransactionVision is missing from the Service Report data sources (QCCR1145415)**

**Description:** The TransactionVision data is not supported as a data source in Service Reports in BSM.

**Workaround:** None.

# Service Health

## Administration

**Rules API Examples:** The Rules API that was introduced in Business Availability Center version 8.00 enables you to create new business rules for Service Health and Service Level Management, using the Groovy scripting language. The BSM documentation contains basic examples of API rules. Additional examples of rules based on customer requests can be found in the Self-Solve knowledge base, in document **KM778069**. This document is intended to be collaborative, and more API rules will be added to it based on customer input. If you have any comments on existing rules or suggestions for new rules, please provide feedback on the document within the knowledge base. Your feedback will then be included within the document.

---

### **Modifying an HI from being fed by metrics to being fed by events (QCCR1I42865)**

**Description:** In general, when you manually edit an HI on a CI using the CI Indicators tab (for example to use a different calculation rule), the assignment mechanism does not override these changes. However, if you modify an HI from being fed by metrics to being fed by events, the assignment mechanism does not recognize this change, and the HI is restored to its original setting. This scenario is not likely in typical usage of BSM.

**Workaround:** None.

---

### **Changing the breakdown configuration does not refresh Service Health components (QCCR1I46143)**

**Description:** In the Breakdown UI, changing the breakdown configuration does not refresh Service Health components.

**Workaround:** If you have configured a breakdown in a local impact view (for example, transaction by location), and you want to change the breakdown type (for example, to location by transaction), you must perform the below steps:

1. Edit the original breakdown configuration, and select the new breakdown type as None.
2. Save the change, and wait a few minutes for the change to take effect.
3. Select your view, and edit the breakdown type to the type you want defined.

---

### **Changes made to triplets not reflected in Service Health calculation (QCCR1I59377F)**

**Description:** If you make changes to the triplets that define impact links within **RTSM CI Type Manager > Calculated Relationships > Triplets**, these changes are not reflected in Service Health calculation.

**Workaround:** After making these changes, access the JMX console (<http://<server name>:21212/jmx-console>). Within the **UCMDB** list of services, select **TQL Services**, and

invoke **retrieveTqINames** using your customer ID. Within the results, search for **marble\_dashboard\_tqi**, and click **Deactivate**. When deactivation is done, click **Activate**. Service Health calculations will now implement your modified impact links.

---

#### **Hidden rule parameters lose their default values (QCCR1165242)**

**Description:** If you create a KPI assignment that uses a rule with hidden rule parameters, and the assignment updates an existing KPI with a different rule, the hidden rule parameters lose their default values. This typically impacts rule calculations. (Note that this does not apply to new KPIs, but only to existing KPIs which had a different rule before they were updated by the assignment.)

**Workaround:** Before updating the assignment, edit the rule definition in the Rule Repository and make the hidden rule parameters configurable (not hidden). You can then update the rule in the KPI assignment, and synch existing CIs. After you save the assignment, you can return the rule parameters to be hidden. Alternatively, you can delete the existing KPIs before running the KPI assignment; this causes the assignment to create the KPIs rather than update them.

---

#### **Cannot create local impact pattern view based on the BSMDowntime\_impact query (QCCR1165385)**

**Description:** Within **Service Health Administration > View Builder**, you cannot create a local impact pattern view based on the **BSMDowntime\_impact** query.

**Workaround:** You can create a pattern view based on the **BSMDowntime\_impact** query within **RTSM Administration > Modeling Studio**.

---

#### **View Builder is not loaded due to Java exceptions (QCCR1169536)**

**Description:** When you access Admin > Service Health > View Builder, under certain circumstances View Builder is not loaded - there are client-side exceptions (ClassNotFoundException) in the Java Console.

**Workaround:** Clear the client Java CMDB cache:  
C:\Documents and Settings\\Local Settings\Temp\UcmdbAppletJars

---

#### **Changes to breakdowns may result in inconsistent KPI statuses (QCCR1170973)**

**Description:** If you make changes to a breakdown that impact KPI or HI status (for example if you change the KPI calculation rule from worst to best child), there may be inconsistencies between the statuses in the Service Health UI and other components such as reports.

**Workaround:** None.

## **Application**

**PNR KPI Persistency:** The PNR KPI in Service Health does not have persistency in case of a Data Processing Server failure or a system restart. The PNR KPI shows an initialized status until

the SLA is recalculated, at which time the PNR value is updated.

---

#### **Daylight Savings Time:**

- Reports that include the time period during which a Daylight Savings Time (DST) change took place (change to or change from DST) will either be missing one hour (in cases where clocks are moved forward) or have two sets of data for the same hour (in cases where clocks are moved back).
  - If a report's time range includes the time of a Daylight Savings Time (DST) change, the data for the period after the DST time change is incorrect. To obtain correct data for the entire time range, print two separate reports, one for the time range before the DST time change and one for the time range after the DST time change.
- 

#### **Moving the Configuration Items dialog box can freeze the UI (QCCR1142825)**

**Description:** Within the 360° View, if you select the Filter icon on the toolbar, and then click the Configuration Items link, the Configuration Items dialog box opens. If you move this dialog box within the screen, the UI can freeze.

**Workaround:** Reselect the component to enable it again.

---

#### **If the management database goes down, the 360° View suffers a fatal error (QCCR1146512)**

**Description:** If you are working with High Availability and a load balancer, if the management database goes down, the 360° View suffers a fatal error.

**Workaround:** Log out of BSM and then log in again.

---

#### **Inconsistency displaying breakdown views (QCCR1147502)**

**Description:** If no new samples were received after a breakdown was defined in a view, and samples were received from only some of the locations, the view can show inconsistent worst statuses on the locations.

**Workaround:** None.

---

#### **Inconsistency in breakdown view for KPIs that do not participate in the breakdown (QCCR1147561)**

**Description:** In a local impact view with breakdown defined, when a KPI is based on samples that do not contain the relevant breakdown information, the KPI may contain misleading data. For example, you may have a breakdown of location by application, and an application CI shows Worst Status of the System KPI from two business transactions. If these BTs are in two locations, and the KPI is Critical in one of the two, each location will show the application as Critical, even though the BT is Critical in only one of the locations.

**Workaround:** None.

---

---

### **Error when viewing federated incidents and actual changes (QCCR1147931)**

**Description:** Attempting to view federated incidents and actual changes in the Service Health application sometimes fails.

**Workaround:**

1. Access the JMX console: `http://<server name>:21212/jmx-console/`
2. Go to the UCMDB:service=Settings Services section.
3. In the **setSettingValue** table, enter the following values:
  - Customer ID = 1
  - Name = `cmdb.tql.should.use.old.federatedgrader`
  - Value = true
4. Click **Invoke**.

**Note:** You may have to enter user credentials to access the JMX console; if you do not know them, ask your system administrator.

---

### **Not possible to reset HI to default (QCCR1148559)**

**Description:** In the Health Indicators component, the menu command "Reset Health Indicator" to reset an HI to its default state does not work for metric-based indicators.

**Workaround:** None.

---

### **In the Health Indicator component, if an event has arrived twice, there is no tooltip for the related HI (QCCR1166891)**

**Description:** An HI in the Health Indicator component has no tooltip. Investigation shows this is because the HI is related to an event that has arrived twice to BSM.

**Workaround:** None .

## **Hierarchy**

### **Only one filter is saved in session per user and customer (QCCR1152699)**

**Description:** Within the Hierarchy component, only one filter can be used at a time, per user, per customer (regardless of quick filter or advanced). This means that if a user is using a filter in one Hierarchy component, and the user then activates a different filter in another Hierarchy component, the first filter is overridden.

**Workaround:** None.

**Filter change done during Web Server or Application Server restart is not saved (QCCR1162605)**

**Description:** If you are working in a high availability environment with a load balancer, and are editing an existing filter in Service Health when the web server or application server restarts, changes to the filter are not saved.

**Workaround:** None.

## MyBSM

**JavaScript errors when navigating from MyBSM (QCCR1147291)**

**Description:** In some versions of Internet Explorer if the browser is configured to show JavaScript errors, when you navigate from MyBSM to a different application in BSM, a popup window appears. This window contains the following message: **Errors on this webpage might cause it to work incorrectly.**

This message is not indicative of a problem. Any changes you made in MyBSM are saved, and MyBSM continues to work correctly.

**Workaround:** To prevent this message from appearing, within Internet Explorer access the **Internet Options > Advanced** tab, and clear the **Display a notification about every script error** checkbox.

---

**Wiring to the NNMi Path View component does not work (QCCR1147619)**

**Description:** Wiring to the NNMi Path View component does not work. For example, if Top View and Path View are on the same page, when you select a CI in Top View, the Path View component does not show the path for this CI in NNM topology.

**Workaround:** None.

## Service Level Management

**Rules API:** The Rules API that was introduced in Business Availability Center version 8.00 enables you to create new business rules for Service health and Service Level Management, using the Groovy scripting language. The BSM documentation contains basic examples of API rules. Additional examples of rules based on customer requests can be found in the Self-Solve knowledge base, in document **KM778069**. This document is intended to be collaborative, and more API rules will be added to it based on customer input. If you have any comments on existing rules or suggestions for new rules, please provide feedback on the document within the knowledge base. Your feedback will then be included within the document.

---

**PNR KPIs:** In Service Level Management, you cannot attach more than one PNR KPI (defined in Service Health) to a CI.

---

**CI in SLAs:** You cannot add a CI to an SLA when the CI includes a copy of itself in the original definition in the RTSM. This is because nesting is meaningless in the SLA calculation (Service Level Management cannot calculate a CI using the CI result as a value). If you do so, your operation will fail with a general error. However, you can add the same CI to an SLA more than once if the CI does not include a descendant of itself. In this case, Service Level Management calculates the CI only once, so the objectives are the same no matter where the CI appears in the SLA hierarchy.

---

#### **If ETL tasks do not progress, neither do SLM calculation tasks (QCCR1I43943)**

**Description:** If the ETL tasks on the TRANSACTIONS\_DIM or LOCATIONS\_DIM tables do not progress because of a failure, the offline engine will also not perform SLA calculation tasks, until the ETL tasks for the same time period have been executed.

**Workaround:** None.

---

#### **Linkage between Business Transaction and SAP Transaction is disabled (QCCR1I47274)**

**Description:** After BSM restart, the automatic linkage of Business Transactions to SAP Transactions is disabled.

**Workaround:** To enable the linkage mechanism, restart the VERTICALS service in the MercuryAS process.

---

#### **KPI or HI rule causes an "out of memory" exception (QCCR1I51423)**

**Description:** When you create a KPI or HI rule using the API Rule Definitions in the SLA Wizard > Configure SLA Wizard pane, the rule may cause an "out of memory" exception when you recalculate the SLA.

**Workaround:** Do not create rules using the API Rule Definitions in the SLA Wizard UI. Instead, write the rule script, and only use the UI to test the rule. To test a rule, create a "dummy" SLA using the rule in the UI, and re-calculate the SLA to verify calculation results. When the script works properly, copy it into a text file and apply it to a KPI or HI instance as described in the Rules API documentation. If an OutOfMemoryError occurs during the rule testing, restart the BLE (offline engine).

---

## Operations Manager i

### Authorization

#### **Deleted users and groups remain visible in the Event Perspective (QCCR1A91299)**

**Description:** When user groups are added or deleted, the change is not immediately visible in the User Assignment dialog of the Event Browser or Event Details.

**Workaround:** After the refresh interval of 10 minutes, log off and back on again. The deleted users and groups will not appear and any added users and groups should be available.

## Certificates

### After a reboot the certificate server (ovcs) is not started (QCCR1A123805)

**Description:** After a reboot, the certificate server is not automatically started. Requests for new certificates are ignored.

**Workaround:**

1. On the data processing server start the certificate server using the following command:

- On Windows:

```
ovc -start ovcs
```

- On Linux:

```
/opt/OV/bin/ovc -start ovcs
```

2. Edit the following configuration file to make sure that the certificate server restarts automatically in future:

- On Windows:

```
%OvDataDir%\Conf\ctrl\ovcs.xml
```

- On Linux:

```
/var/opt/OV/Conf/ctrl/ovcs.xml
```

Change the following line:

```
<ovc:StartAtBootTime>false</ovc:StartAtBootTime>
```

to:

```
<ovc:StartAtBootTime>true</ovc:StartAtBootTime>
```

3. On any computer that sent a certificate request when the certificate server was not running, send another certificate request using the following command:

- On Windows:

```
ovcert -certreq
```

- On Linux:

```
/opt/OV/bin/ovcert -certreq
```

## Configuration

### Context menu not visible on dashboard (QCCR1I69965)

**Description:** The BSM dashboard may fail to display a context menu. The following error message appears in `context.menu.log`:

(ContextMenuManager.java:409) INFO - caught exception during menu building.

**Workaround:** BSM 9.13 contains a fix for this issue for new installations and upgrades. For upgrades, you must activate the fix by clearing the repository type cache as follows:

1. In a web browser, open `http://<gateway server>:8080/jmx-console`.
2. Under Topaz, click `service=repositories_manager`.
3. Start `cleanRepositoryTypeDBAndCache()` with `sCustId=0` and `repositoryType=contextMenu`.

## Content Packs: Active Directory

If you use the Microsoft Active Directory Content Pack 9.10 with HP Operations Smart Plug-in for Microsoft Active Directory 6.10, few of the following artifacts do not work. This is because either the artifacts are newly added or modified in the Microsoft Active Directory Content Pack 9.10.

His/ETIs	Correlation Rules
SysvolDiskQueueLength	AD::FileSystem:Disk Usage Level >> DomainController Performance
LDAPConnectivity	AD::DomainController:Sysvol Disk Queue Length >> DC Replication Latency & Inbound Replication Object Rate
GCConnectivity	
OutboundReplicationObjectRate	
DirectorySearchRate	
DirectoryReadRate	
DirectoryWriteRate	

## Content Packs: Exchange

If you use the Microsoft Exchange Server Content Pack 9.10 with HP Operations Smart Plug-in for Microsoft Exchange Server 12.10, few of the following artifacts do not work. This is because either the artifacts are newly added or modified in the Microsoft Exchange Server Content Pack 9.10.

CI Types	His/ETIs	Correlation Rules
Exchange Storage Group	IMAP4Latency	Exchange::Microsoft Exchange Server:GC Search Time >> Client Accessibility
Exchange Mailbox Database	POP3Latency	
	ActiveDirectoryAccess	Exchange::Microsoft Exchange Server:GC Search Time >> Mail Flow Latency
	GCSearchTime	
	GCBindTime	
	AvailableTransactionLogDiskSpace	

CI Types	HI/ETIs	Correlation Rules
	AvailableDatabaseDiskSpace	Exchange::Microsoft Exchange Server:GC Search Time >> Transport Queue Length
	MailflowLatency	
	MapiLatency	Exchange::Exchange Mailbox Database:Available Database Disk Space >> Information Store Service Status
	MapiConnectivity	
	MailFlowStatus	
	AvailableTransactionLogDiskSpace	Exchange::File System:Disk Usage Level >> Available Database Disk Space
	ActiveDirectoryAccess	
	EdgeSynchronizationStatus	Exchange::Exchange Mailbox Database:Available Database Log Disk Space >> Information Store Service Status
	ExchangeServiceHostStatus	
	ActiveSyncLatency	
	IMAP4Connectivity	Exchange::Exchange Hub Server:Submission Queue Length >> Mail Flow Latency
	POP3Connectivity	
	OWAConnectivity	Exchange::Exchange Hub Server:Active Mailbox Delivery Queue Length >> Mail Flow Latency
	ActiveSyncConnectivity	
	OWALatency	
	FileDistributionServiceStatus	Exchange::Network Interface:Network IO >> Mail Flow Latency
	UnifiedMessagingConnectivity	
		Exchange::DomainController:DC LDAP Query Response Time >> MailflowLatency
		Exchange::DomainController:DC LDAP Bind Response Time >> MailflowLatency
		Exchange::Exchange Mail Server:Information Store Service Status >> Mail Flow Status & Mapi Connectivity
		Exchange::Exchange Mail Server:Mail Submission Service Status >> Mail Flow Status
		Exchange::Windows:CPU Load >> OWA Latency & Active Sync Latency

CI Types	HIs/ETIs	Correlation Rules
		<p>Exchange::Network Interface:Network IO &gt;&gt; Client Accessibility</p> <p>Exchange::DomainController:DC LDAP Query Response Time &gt;&gt; Client Accessibility</p> <p>Exchange::DomainController:DC LDAP Bind Response Time &gt;&gt; Client Accessibility</p> <p>Exchange::Microsoft Exchange Server:GC Search Time &gt;&gt; Client Accessibility</p> <p>Exchange::Exchange Mail Server:Information Store Service Status &gt;&gt; Client Accessibility</p> <p>Exchange::Exchange Client Access Server:IMAP4 Service Status &gt;&gt; IMAP4 Connectivity</p> <p>Exchange::Exchange Client Access Server:POP3 Service Status &gt;&gt; POP3 Connectivity</p> <p>Exchange::Microsoft Exchange Server:AD Topology Service Status &gt;&gt; Unified Messaging Services</p> <p>Exchange::Exchange Unified Messaging Server:Speech Engine Status &gt;&gt; Unified Messaging Status</p>

---

**ETIs are not resolved for Exchange servers on clusters using HP Data Flow Management or Dynamic Topology Synchronization (QCCR1A108412)**

**Description:** If Exchange Servers hosted on clusters are discovered with HP Data Flow Management or Dynamic Topology Synchronization, then the events from the Smart Plug-in for Exchange do not impact the Exchange Server CI type in the cluster.

**Workaround:** None.

---

**Exchange SPI: CI Info incorrect for several policies leading to no resolution of ETI (QCCR1A130090)**

**Description:** Events generated from the following Exchange 2007 Policies do not map to the correct CI.

- EXSPI-8X\_Check\_ADTopologyServiceStatus
- EXSPI-8X\_Check\_InformationStoreServiceStatus
- EXSPI-8X\_Check\_MailSubmissionServiceStatus
- EXSPI-8X\_Check\_MailboxAssistantServiceStatus
- EXSPI-8X\_Check\_ReplicationServiceStatus
- EXSPI-8X\_Check\_SystemAttendantStatus
- EXSPI-8X\_Check\_MBExchangeServiceHostStatus

This is because the CMA "ciinfo" in the events generated in above policies was incomplete.

**Workaround:** Contact your HP Software Support representative for a hotfix.

## Content Packs: Infrastructure

**Events from the policy "SI-NetworkUsageAndPerformance" may fail to map to the correct CI (QCCR1A130703)**

**Description:** On a node that has multiple network interfaces, events from the policy "SI-NetworkUsageAndPerformance" fail to map to the correct CI.

**Workaround:** None.

## Content Packs: Microsoft SQL Server

If you use the Microsoft SQL Server Content Pack 9.10 with HP Operations Smart Plug-in for Microsoft SQL Server 11.50, few of the following artifacts do not work. This is because either the artifacts are newly added or modified in the Microsoft SQL Server Content Pack 9.10.

HIs/ETIs	Correlation Rules
Disk Read-Write Rate	Database::FileSystem:SQLServer
Server Load	Transaction Log Usage Level HIs >> Disk Usage Level
SQL Server Disk Read-Write Errors	Database::FileSystem:SQLServer
SQL Server Databases Status	FileGroup Space Usage Level HIs >> Disk Usage Level
SQL Query Tuning	Database::Computer:SQLServer
Lock Memory Used Pct	FileGroup Space Usage Level HIs >> Disk Usage Level
SQL Server Database Space Usage Level	
Database Deadlock Rate	

HIs/ETIs	Correlation Rules
Database FileGroup Space Usage Level	
Database Latch Wait Rate	
Database Lock Timeout Rate	
Database Mirroring Transaction Delay

SQL Server Cursor Memory Usage	
SQL Server Database Active Transactions	
SQL Server Databases Data File Size	
SQLServer Databases Transaction Rate	
Server Transaction Rate	
Transaction Log Usage Level	
Inactive Database Connections	
Merge Conflicts	

## Event Browser

### **Not all areas can be controlled using only the keyboard (QCCR1A4280)**

**Description:** It is generally possible to control the Operations Management user interface using keyboard navigation. In some cases, however, a pointing device of some kind is required. For example, when an event is selected in the browser using the keyboard (arrow keys + space) the event details are updated, but the event is not delivered to other portions of the user interface. Other examples include switching between tabs and activating context menus.

**Workaround:** Use a pointing device when keyboard navigation is not possible or does not function correctly.

---

### **Event Browser search does not consider all fields (QCCR1A102810)**

**Description:** The search function in the Event Browser does not search the contents of the CI Type column.

**Workaround:** None.

---

### **Annotations cannot be saved if they contain a specific Chinese character (QCCR1A120197)**

**Description:** If you add a specific Chinese character (  CJK unified ideograph-2053B) to fields in the Event Details pane, Connected Servers manager, or Event Forwarding manager, it is not possible to save the changes.

**Workaround:** None.

---

### **Filter list is not updated automatically when switching between Event Perspective and Health Perspective (QCCR1A118936)**

**Description:** Event filters created in the one perspective (for example, the Event Perspective) are not visible in other perspectives (for example, the Health Perspective).

**Workaround:** Open the Filter Manager and refresh the list.

## Event Details

### **Not possible to enter special characters using the ALT GR key in the Event Details text fields with Firefox 3.6 (QCCR1A106086)**

**Description:** In Firefox 3.6, if you view the Event Details pane within the Event Browser, you cannot use the ALT GR key to type special characters in the text boxes.

**Workaround:** Double-click the event in the Event Browser. The Event Details pane opens in a separate window. You can then type special characters using the ALT GR key.

## Event Forwarding

### **Possible customizations in the SM Groovy script "ServiceManagerAdapter.groovy" are not documented (QCCR1A138676)**

**Description:** The possible customizations in the SM Groovy script "ServiceManagerAdapter.groovy" are not documented.

**Workaround:** BSM 9.13 provides the following fixes for this issue:

- The Service Manager integration script has been rewritten to enable easier customization.
- The OMi Extensibility Guide has been enhanced to describe how to customize the OMi to SM integration.

**Note:** BSM 9.13 replaces the current `ServiceManagerAdapter.groovy` script on each BSM Gateway server where this update is applied. In the case of an upgrade, the existing version of the script, including any customizations, is moved to the following folder:

```
<HP BSM root directory>/installation/HPBsm913/backup/conf/opr/integration/sm
```

If the existing version has been customized, you must reapply the customizations to the new version of the script. It is important to note that the default SM Web Tier name has changed from 'webtier-9.20' to 'webtier-9.30'.

You must customize the following variable at the start of the script if your Service Manager Web Tier webapp has a different name:

```
private static final String SM_WEB_TIER_NAME = 'webtier-9.30'
```

This variable is used when constructing URLs for cross launching the Service Manager user interface from the OMi event browser when an OMi event has been forwarded to Service Manager.

## Event Processing Pipeline

### **ConnectException in opr-common.log (QCCR1A118727)**

**Description:** After you start up BSM, the `opr-common.log` file contains the following error message:

```
ERROR HibernateChangeListenerImpl.sendInsertEventsToListener(399) -  
Exception occurred while calling entitiesInserted() on listener
```

**Workaround:** You can ignore this error message if it occurs during the startup of BSM.

---

### **CI resolution does not work correctly after upgrade (QCCR1A131396)**

**Description:** Some events do not have a properly resolved node and CI. This problem occurs when an event uses an IP address or a hostname that is not the primary host name of the related host.

**Workaround:**

1. Select **Admin > Platform > Setup and Maintenance > Infrastructure Settings**.
2. Select **Applications** and use the list to set the administration context to **Operations Management**.
3. Edit the **Cache Modification Configuration** setting in one of the following ways:
4.
  - Restore the default setting by clicking the **Restore Default** button.
  - Add the following fragment between the tags `<CiResolver>...</CiResolver>`:

```
<WhiteListTypes>  
    <WhiteListCiType>node</WhiteListCiType>  
    <WhiteListCiType>ip_address</WhiteListCiType>  
</WhiteListTypes>
```

5. Click **Save**.

## Graphing

### **Virtualization\_Infrastructure view in Performance Perspective: Performance graph is not appearing for VM hosted on ESX machine (QCCR1A114189)**

**Description:** For the Virtualization\_Infrastructure view in the Performance Perspective, performance graphs are not drawn for virtual machines hosted on an ESX server.

**Workaround:** In the model explorer, select the vMA node first and then select the VM that you are interested in. The performance graphs are drawn as expected.

---

### **When launching performance graphs (CI) from a VMware event, the graphs show metrics for VMs with similar names (QCCR1A118759)**

**Description:** When a user launches a graph for a Virtual Machine CI, graphs are drawn for all the virtual machine CIs that have similar names.

**Workaround:** Close the graphs for unwanted virtual machine CIs.

---

### **Unable to delete custom graphs through Admin > Operations Management in Internet Explorer 8 (QCCR1A119284)**

**Description:** User is unable to delete custom graphs through Admin -> Operations management in Internet Explorer 8.

**Workaround:** Log out and then log in again to see the changes. The selected custom graphs are deleted.

---

### **Launching of Performance Graphs (neighborhood) option for virtualization configuration items (CIs) takes a long time to respond (QCCR1A123200)**

**Description:** Launching of Performance Graphs (neighborhood) for virtualization configuration items (CI) takes longer if there are no agents running on the neighborhood nodes. This delay happens because the performance graphs try to connect to each of the nodes with a default time-out of 60 seconds per node.

**Workaround:** Use either of the following workarounds:

- Use the Launch Performance Graphs (CI) option from the Event Browser for viewing the virtualization related CIs.
- You can also change the default time-out required by Graphing to connect to the nodes.

To change the default time-out to connect to the nodes follow these steps:

- a. Launch a web browser and then enter the following URL:

`http://<Gateway or Data Processing server name>:8080/jmx-console/`

---

The Gateway or Data Processing server name is the name of the machine on which HP Business Service Management is running.

- b. To login into JMX Console, you are required to enter the authentication credentials configured when installing BSM and running the Setup and Database Configuration utility.
- c. Click **service=Infrastructure Settings Manager** under **Foundations** to open the JMX MBEAN View page. In the `void setGlobalSettingValue()`, enter the values `opr`, `opr.graphing.responsetimeouthttp` and `<new timeout value>` (in seconds) in the **ParamValue** field for the parameters listed.

---

#### **EUM - event launch shows all instances with same name (QCCR1A120394)**

**Description:** When a user launches graphs for an EUM CI in one Business Transaction Flow (BTF) from the Event Perspective, graphs are displayed for all the CIs having similar names in other BTFs as well.

**Workaround:** After the graphs are drawn, expand the left pane in the graph window and select only the CI for which you want to view the graphs. Graphs for selected CI are then drawn.

## **End User Management**

#### **Add a configuration for alerts that will allow setting minimum transaction before triggering alert (QCCR1I52998)**

**Description:** When you first log in to a BSM 9.1x system that was upgraded from BSM 9.10, end-user management alerts are automatically upgraded. For those alerts that included multiple conditions with different values for the minimum number of transactions:

- If the conditions were conjoined by AND, the highest value is used for the upgraded alert.
- If the conditions were conjoined by OR, the lowest value is used for the upgraded alert.

---

#### **BPM and RUM Advanced with SLM licenses are not valid (QCCR1I56279)**

**Description:** BPM and RUM Advanced with SLM licenses are not valid in BSM 9.10 or 9.12. If you upgraded from a BSM 9.0x version in which you were using evaluation versions of such licenses, they will show as expired. RUM probes assigned an expired license will not monitor any application tiers. BPM applications assigned an expired license will still be monitored, but will have limited configuration options.

**Workaround:** Install and assign valid licenses.

---

#### **Invalid combinations of metrics and active filters in Metrics Over Time report (QCCR1I56993)**

**Description:** In the Metrics Over Time report, certain combinations of selected metrics and active filters are invalid and result in data for the report not being retrieved. A warning message to this effect is displayed.

**Workaround:** Change the active filters or select different metrics.

---

**ALM-EUM Integration - the ZIP archive is broken when the RUM application name contains non-English characters and archive was sent via email (QCCR1I71178)**

**Description:** When exporting EUM data for ALM, if the selected application name contains non-English characters, the zip file is corrupted when sent via email. In such cases, the application name will be excluded from the zip archive name, which then comprises the to and from dates only.

**Workaround:** None.

## Business Process Monitor

**VuGen Scripts:** When you run a script written in VuGen that uses proxy settings from an automatic configuration script (.pac file) configured in the run-time settings of the script, if one of the proxies in the .pac file is unavailable, replaying the script in either VuGen or Business Process Monitor may result in a high response time and, in some instances, the script may fail due to a timeout. The script can be run in Internet Explorer without this problem, as it ignores the unavailable proxy.

---

**BSM URL:** Business Process Monitor registers with BSM using `http://<BSM Gateway Server name>/topaz`, and not with HPBAC or MercuryAM at the end of the URL. You must use this format when creating instances for Business Process Monitor.

---

**Page Component Breakdown URL:** When running a page component breakdown (from End User Management or Business Process Monitor), the target URL is limited to 144 characters.

---

**Usage of BSM 9.x Script parameter feature:** Script parameterization is supported for BPM version 8.x and later. (QCCR1I65877)

---

**WebTraces over UDP protocols do not work (QCCR1I56114)**

**Description:** WebTraces configured to work over UDP protocols do not work in Windows 7 and Windows 2008.

**Workaround:** None.

---

**Default granularity of the BPM Custom Reports time filter is calculated differently (QCCR1I60312)**

**Description:** The default granularity of the BPM Custom Reports time filter is calculated differently in BAC 8.x and BSM 9.x. Thus, BPM Custom Reports created in 8.x may appear differently after being upgraded to 9.x.

**Workaround:** Edit the filter in 9.0 and select any granularity that you want for each component.

---

### **BPM instances on Windows 7**

**Description:** You must run BPM instances on Windows 7 as a system user (default) or as a user with administrator privileges.

**Workaround:** None.

## **Real User Monitor**

**License Key:** The “RUM Advanced with SLM” license key cannot be generated and installed. To work around this problem, reconfigure the RUM probe license setting to use the “RUM Probe” and “RUM SPI for Applications” license after the RUM license is installed. To change RUM license setting navigate to **End User Management Administration > Settings Tab > Real User Monitor Settings Tab > RUM Licenses > RUM Probe Licensing table**.

---

**SSL:** When Business Service Management is working with SSL and requires client-side certificate, Real User Monitor session replay will not work

---

### **RUM Text Pattern events are not functional for Oracle NCA over TCP (QCCR1I54373)**

**Description:** RUM Text Pattern events are not functional for Oracle NCA over TCP.

**Workaround:** None.

---

### **After upgrading to RUM 9.1x some locations are not supported (QCCR1I61975)**

**Description:** The following locations are not supported by Real User Monitor, and traffic monitored from these locations is reported with an unknown location:

- Congo The Democratic Republic Of
- United States Minor Outlying Islands
- Macedonia The Former Yugoslav Republic Of
- South Georgia And The South Sandwich Islands
- Korea Democratic People's Republic Of

**Workaround:** None.

---

### **Some active filters do not work on upgraded RUM data (QCCR1I62276)**

**Description:** When reports are generated for RUM data that has been upgraded to version 9.x, some of the active filters in the report do not work.

**Workaround:** None.

---

**RUM reports not available (QCCR1I63076)**

**Description:** RUM reports are not available in BSM.

**Workaround:** If you configure an application for RUM the first time you log in to a new BSM system, log out of BSM and log in again before accessing RUM reports.

---

**RUM Probe - MQ Protocol - Text Pattern Events cannot be triggered (QCCR1I64927)**

**Description:** Even though you are able to configure RUM text pattern events for MQ protocol applications in BSM, such events are not relevant for this protocol and are not triggered.

**Workaround:** None

---

**RUM upgrade - when upgrading to RUM 9.2, poor request report data is not upgraded (QCCR1I71259)**

**Description:** When upgrading to RUM 9.20, previously save Poor Request report data is dropped and is no longer available.

**Workaround:** None

## System Availability Management and SiteScope

**Link Monitor to CI Settings:** The Link Monitor to CI Settings pane is not supported in Business Service Management 9.00 or later and was removed from Business Service Management's System Availability Management Administration page. To use this functionality, upgrade to SiteScope 11.00 or later, and use the report custom topology feature in **HP Integration Settings > BSM Integration Data and Topology Settings** in the monitor properties.

---

**SiteScope Restarts:** If a SiteScope is restarted while being accessed in System Availability Management Administration, you may receive an error and have to navigate back to the SiteScope to properly access the SiteScope server.

---

**SiteScope Copy and Paste:** If you are copying from a SiteScope version 10.00 to another SiteScope version 10.00 using the copy/paste functionality in System Availability Management Administration, there may be a delay of up to a minute until the pasted object appears in the target SiteScope. This is because the monitor tree in the new SiteScope user interface refreshes by default five seconds after a paste operation completes. If the paste operation takes longer than 5 seconds, it will miss this automatic refresh and the pasted objects appear only after the regularly scheduled refresh (by default 60 seconds).

---

**SAM Administration Copy and Paste:** In System Availability Management Administration, when copying objects from one SiteScope to another, there is no dependency check. This means that you can copy an object that depends on another object to a different SiteScope, even though the object on which it depends does not exist on the target SiteScope.

---

**SAM Administration Page cannot be displayed error:** In System Availability Management Administration, when the SiteScope service is down, instead of receiving an error to this effect, you will see a **Page cannot be displayed error**.

---

**SiteScope Reset:** If a SiteScope is being reset when BSM is not running, the SiteScope will appear as registered with a configurable profile in System Availability Management Administration once BSM is running again. The SiteScope must be reset when BSM is running.

---

**SAM Administration Recently Used Monitors:** On the **New Monitor** page, the **Recently Used Monitors** list is not saved when you exit System Availability Management Administration.

---

**SiteScope Profiles:** When creating a SiteScope profile in System Availability Management Administration, if you change the profile display name after having received any error during the profile creation process, the default profile name is not changed accordingly. Ensure that the profile name and SiteScope agent machine location fields contain the desired values.

---

**SAM Administration Actions:** In System Availability Management Administration, there is no notification for successful actions in the user interface.

---

**SiteScope Release Notes:** Refer to the SiteScope release notes for all SiteScope limitations.

---

**SiteScope Documentation:** SiteScope documentation is available only as a standalone help system. It is no longer a part of the BSM Documentation Library.

---

**Monitor Deployment Wizard only supports topology reporting for monitors that have a default topology defined (QCCR1139697)**

**Description:** The Monitor Deployment Wizard only supports topology reporting for monitors that have a default topology defined. This means you can select to add a template to a CI only if the CI type is the default CI type for all the monitors in the template.

**Workaround:** None.

---

**After an upgrade to BSM 9.10, manually resynchronize SiteScope (QCCR1139744)**

**Description:** If you upgrade to BSM 9.10 while using SiteScope 11.00, you should manually resynchronize SiteScope instead of waiting for topology data to be sent to BSM based on the Topology resynchronization time interval.

**Workaround:** None.

---

**After Jboss Application Server recovery, there is no data in SAM Administration "Summary" (QCCR1144570)**

**Description:** After JBoss Application Server recovers from a server crash, the information in the right pane of the Summary tab in SAM Administration does not show any data until BSM is restarted.

**Workaround:** Restart BSM.

---

**SiteScope 10.00 topology data is not reported to BSM (QCCR1147810)**

**Description:** When SiteScope 10.00 is connected to BSM 9.00, topology data is not reported to BSM.

**Workaround:** Contact customer support for a workaround to be supplied on top of SiteScope 10.00, or upgrade your version of SiteScope to 10.10 or later.

---

**408 Request Timeout error in Internet Explorer 7**

**Description:** When accessing SiteScope from System Availability Management Administration using Internet Explorer 7, a 408 Request Timeout error is displayed.

**Workaround:** Configure the browser to accept cookies from the SiteScope server.

1. In Internet Explorer, select **Tools > Internet Options > Privacy tab > Advanced** button.
  2. Select **Override automatic cookie handling**, make sure **First-party cookies** and **Third-party cookies** are set to **Accept**, and select **Always allow session cookies**.
- 

**Settings when registering SiteScope to a BSM server that uses a load balancer (QCCR1156354)**

**Description:** When registering SiteScope to a BSM server that uses a load balancer, make sure that the Gateway server name/IP address (in Admin > System Availability Management > Distributed Settings) is the Default Virtual Server for Application Users URL (and not the Default Virtual Server for Data Collectors URL). This URL can be found in Admin > Platform > Setup and Maintenance > Infrastructure Settings > Foundations > Platform Administration > Host Configuration table.

**Workaround:** None.

---

---

**No reconciliation between SiteScope and Discovery and Dependency Mapping (QCCR1156709)**

**Description:** There is no reconciliation between SiteScope and Discovery and Dependency Mapping when there is only a default SQL server instance. SiteScope reports the default value "SQLServer" as the name of the CI, while DDM reports the name of the host.

**Workaround:** Install an SQL database with a named instance.

---

**Unable to perform some actions in SAM Administration in a load balancing environment (QCCR1158582)**

**Description:** Unable to perform the following actions in SAM Administration in a load balancing environment when SiteScope 10.x or later is integrated with BAC/BSM:

- Copy/paste from one SiteScope to another.
- Perform a Global Search and Replace.
- Run the Monitor Deployment Wizard.

**Workaround:** Register (or remove and reregister) SiteScope to the BSM server using the Default Virtual Server for Application Users URL instead of the Default Virtual Server for Data Collectors URL (enter the URL in Admin > System Availability Management > Distributed Settings > Gateway server name/IP address). This URL can be found in Admin > Platform > Setup and Maintenance > Infrastructure Settings > Foundations > Platform Administration > Host Configuration table.

If you cannot remove SiteScope from BSM because you do not want to lose data, you can change the host name on SiteScope under BSM Integration Preferences (Preferences > Integration Preferences > Business Service Management machine name/IP address).

---

**Issue with Operations Manager integration when BSM using an HTTPS reverse proxy or a load balancer (QCCR1159226)**

**Description:** If BSM is using an HTTPS reverse proxy or a load balancer, you need to provide the HP Operations Agent on the SiteScope server with a certificate so that it can communicate securely with BSM.

**Workaround:** Check for an updated version of these release notes on the HP Software Support Site for details on how to manually configure the agent.

---

**Downtime functionality in SiteScope 10.x or earlier is not supported when connected to BSM 9.x (QCCR1160368)**

**Description:** Downtime functionality in SiteScope 10.x or earlier is not supported when connected to BSM 9.x, since a new downtime cannot be created on a SiteScope profile. Previously defined downtimes in BSM 8.x upgraded to BSM 9.x do not affect SiteScope.

---

**Workaround:** To enable SiteScope support for the new downtime functionality when using BSM 9.x, upgrade your version of SiteScope to 11.x.

---

### **Generating SAM Reports (QCCR1162712)**

**Description:** When generating SAM reports on a loaded system:

- It takes a couple of minutes for result data to be displayed in the Group Performance Report and Monitor Performance Report.
- The Cross-Performance Report may not respond when using the Select Measurements filter on an Internet Explorer browser.

**Workaround:** Wait until the servers list is loaded in the user interface before navigating to other profiles.

---

### **SISConfigurationEnrichmentUpgrader failure (QCCR1165694)**

**Description:** During BSM upgrade, SISConfigurationEnrichmentUpgrader may report FAILED, PARTIALLY FAILED, or NOT REQUIRED status, or the BSM content packs may not automatically upload.

**Workaround:** Delete the **blockAutoUpload** file located in the **<HPBSM root directory>\conf\opr\content** folder.

---

## **Transaction Management**

The TransactionVision 9.10 Processing Server can only be used with BSM 9.12 or 9.13.

---

**Java Plug-in Version:** Transaction Management Administration pages may fail to initialize.

In some cases, the Admin > Transaction Management pages may not initialize. Errors such as the following appear:

```
java.lang.RuntimeException:  
java.lang.reflect.InvocationTargetException  
  
    at sun.plugin2.applet.Plugin2ClassLoader.defineClassHelper (Unknown  
Source)  
  
    at sun.plugin2.applet.Plugin2ClassLoader.access$100 (Unknown Source)  
  
.....  
Caused by: java.lang.NullPointerException  
  
    at com.sun.deploy.security.CP_CALLBACK_HANDLER.isAuthenticated (Unknown  
Source)
```

These errors are related to the Java Plug-in that is being used to view applets. See [http://bugs.sun.com/view\\_bug.do?bug\\_id=6967414](http://bugs.sun.com/view_bug.do?bug_id=6967414).

To workaround this problem, use Version 6 Update 18 or greater of the Java Plug-in. See the BSM Deployment Guide for information about the supported versions of the Java Plug-in.

---

**Transaction Management > Administration page does not refresh correctly (QCCR1147950)**

**Description:** In rare cases, the Transaction Management > Administration page does not refresh correctly after some action and the following error appears:  
com.hp.am.bac.tvb.admin.shared.TVAdminException: An internal error occurred.

**Workaround:** Navigate away from the Transaction Management Admin UI page (by going to the site map or some other page), then return to it. The page should be correctly populated.

---

**Error appears when accessing the Administration page (QCCR1150435)**

**Description:** The following error sometimes appears when accessing the **Transaction Management > Administration** page: `Unable to communicate with BSM.`

**Workaround:** Log out of BSM and log back in, and then access the Transaction Management Administration page again.

---

**Aggregated Topology has been removed from MyBSM (QCCR1153667)**

**Description:** The Aggregated Topology has been removed from MyBSM in 9.10.

**Workaround:** The Aggregated Topology is still available in the Transaction Management application.

---

**Changes to the PresentationQuery.xml file are not reflected until reload (QCCR1162483)**

**Description:** Changes to the **PresentationQuery.xml** file in the Transaction Management Admin user interface (**Admin > Transaction Management > Configuration > TransactionVision** folder > **Configuration** tab > **General** tab) are not reflected until the Transaction Management Admin user interface has been reloaded.

**Workaround:** None.

---

**If the Analyzer logging configuration is set to allow very large log files, the log viewer in the Transaction Management Admin user interface may display incorrectly (QCCR1164232)**

**Description:** If the Analyzer logging configuration is set to allow very large log files (above the default values), the log viewer in the Transaction Management Admin user interface may display all but the last two lines of the log file.

**Workaround:** The files may be viewed in their entirety on the Analyzer system.

---

**Selecting a SQL Statement causes a NullPointerException (QCCR1164322)**

**Description:** Selecting a **SQL Statement** in the **Admin > Transaction Management > Configuration > Queries > JDBC** criteria, causes a **NullPointerException** in the query engine.

**Workaround:** None.

---

#### **In languages other than English, MQDISC exit event is incorrectly sent (QCCR1164374)**

**Description:** In languages other than English, in the **Admin > Transaction Management > Configuration > Data Collection Filters > WebSphere MQ API Name** setting, when the **Do not send MQDISC exit event** check box is checked, the MQDISC exit event is incorrectly sent, instead of being disabled. Note that sending the MQDISC exit event can be a high-impact operation, so disabling it improves performance of the WMQ agent.

**Workaround:** None.

---

#### **When the client browser system runs Java 1.6.0\_29, the Transaction Management administration applet fails to load and the Transaction Management Administration user interface in BSM does not work. (QCCR1165531)**

**Description:** The following error appears when using Java 1.6.0\_29 with the Transaction Management Administration user interface in BSM:

**java.lang.NoClassDefFoundError: com/bristol/tvision/shared/CallContext**

**Workaround:** Revert to the previous version, java 1.6.0\_27.

---

## **Business Process Insight**

**Events from TransactionVision:** If you start Business Process Insight while TransactionVision's JMS Event Queue services for sending events to Business Process Insight are unavailable, or if the JMS Event Queue services become unavailable once Business Process Insight has started, the OVBPIJmsEventHandler Service stops. To solve this problem, you need to configure the Windows Service for the OVBPIJmsEventHandler Service under **Control Panel >**

**Administrative Tools > Services**. You should configure the service in the same way as is described for adapter Windows Services in the *Integration Training Guide - Business Events*, by selecting the Recovery option and setting each of the First, Second and Subsequent Failures to the value of **Restart the Service**.

---

**Modifying Servlet Engine Files:** If you intend to modify the Servlet Engine (Tomcat) configuration files, you need to be aware that changes made directly to the Servlet Engine files are overwritten by Business Process Insight configuration files. Refer to the Business Process Insight Server Administration Guide for more details.

---

**Missing Infrastructure Settings:** If you see an error indicating that one or more Business Process Insight Infrastructure settings is missing, make sure that you have specified a value for the Microsoft SQL Server database name:

---

**Instance Database Settings: Database Name**

You need to provide a value for this setting even if you are configuring the settings for an Oracle database. It can be any string, but you cannot leave the field blank; if you do, you receive an error when accessing the Business Process Insight Application pages.

---

**Servlet Engine Appears Not to Start:** Very occasionally, following a system restart, the Servlet Engine appears not to have started, both within the Business Process Insight Administration Console and as a Windows Service. The Servlet Engine service is actually in the processes of starting, but is taking a long time, possibly due to other applications causing delay; for example, the database can take a long time to start when it is very full.

If you think that you are experiencing this problem:

1. Click the **Start** button for the Servlet Engine from the Status screen on the Administration Console.
  2. Click the **Stop** button for the Servlet Engine as soon as it is enabled.
  3. Your Servlet Engine services are now synchronized and the Servlet Engine is not started.
  4. Restart the Servlet Engine as normal.
- 

**Unable to Contact RMI Registry During Component Startup:** If you receive an error message indicating that the Business Process Insight Server is unable to contact the RMI Registry on port 44,000, this is likely to be due to a port number clash.

The Business Process Insight RMI Registry uses port 44,000, and if another application or service is temporarily using this port, then the RMI Registry cannot start. To resolve this problem, you can:

- wait and attempt to restart the Business Process Insight components again.
- use the Business Process Insight Administration Console to modify the port number for the RMI.

Select the Port Numbers tab from the Business Process Insight Server Administration Console to change the RMI Registry port number from 44,000. If you change the value for the port number, you need to make sure that any other configuration affected by this change is also modified, for example, the Business Process Insight Infrastructure settings.

---

**Process Definition Cannot Be Progressed:** Process fails to progress when common data and event definitions are derived from a single process.

The following scenario results in a Process definition that cannot be progressed:

- Create and deploy two Process definitions, each linked to the same Data definition.
- Separate the Processes completely by creating a new Data definition with identical properties to the first Data definition.

One of the Process definitions is now linked to the newly created Data definition and no changes are made to the progression rules. In this case, the Business Process Insight Modeler should

detect that the progression rules are referencing a different Data definition, but it does not and as a result, no process instances are created.

To resolve this problem, use the Export and Import options within the Business Process Insight Modeler to make a copy of a Process definition. Use the option to rename the definitions (not overwrite them).

See “How to Manage the BPI Modeler” in the Using Business Process Insight guide for details of making copies of your Process definitions.

---

**Empty String Values and Null String Value Evaluation in Oracle:** When entering property values for subscriptions within the Business Process Insight Modeler, be aware that the Oracle Server does not distinguish between a zero-length string, and a string with a value that has not been assigned (null string). This means that if you want to test a zero length string within a subscription, you are advised to use a single blank space (“ ”), and not an empty string (“”).

---

**Error Importing a Process Definition:** If you see an error message similar to the following when importing a Process definition into the Business Process Insight Modeler, it is possible that you are attempting to import a Process definition with a name that contains characters that are locale-specific:

**The file proc-defn-name.zip is not a valid import file. Please see the log file for more information.**

where **proc-defn-name** is the filename, based on the Process definition name.

There are restrictions in the use of locale-specific character sets, whereby a .zip file name can contain characters only from the character set of the system locale where the Business Process Insight Modeler is running. The content of the file can contain any characters, but the file name is limited by the character set of the Windows system that is reading or writing the file. In the case of the zip archive files for exporting and importing processes, the zip archive file name is based on the Process definition name. Therefore, if you want to export a Process definition, you have to consider where you will be importing the file. If you plan to move the file across locales, you are advised to use only ASCII characters for the Process definition name to ensure the file can be read on any configured locale.

This problem can also occur if you change the locale of the Windows system where you have created the Process definitions.

---

**Changing the Locale:** If you modify the locale for a system where the Business Process Insight Server is installed, you might find that you cannot start the Business Process Insight Administration Console when you reboot your system. The Administration Console also returns an error indicating that it cannot find the main class and that the program will exit.

This can happen in cases where Business Process Insight is installed into a directory, which is named using locale-specific characters. If the locale for the system is then changed, it is not always possible for the directory and file names to be readable using the character set of the new locale.

If you have changed the locale of the system where Business Process Insight is installed and you are experiencing this problem, you need to:

- revert to the original locale and continue to use Business Process Insight.
- revert to the original locale, uninstall Business Process Insight, configure the new locale, and then reinstall Business Process Insight into a new directory.

---

**Installation on Turkish Locale Causes an Exception:** If you attempt to run the Business Process Insight Installation procedure using a Turkish locale, the installer does not present the installation screens correctly and, as a result, you cannot answer the installation questions. This is a problem related to the installation software.

In order to complete the installation successfully, you need to temporarily set the locale to a United States locale. When you have completed the installation, you can reset the locale to Turkish.

---

**Non-ASCII characters in the Oracle Database Data Directory:** If you enter non-ASCII characters for the Oracle database data directory during the Business Process Insight installation, the installation fails with a Database Setup error. The error indicates that Oracle is unable to create the database instance or a database table.

If the Business Process Insight installer reports a Database Setup Error, and you have used non-ASCII characters for the name of the database data directory, you need to reinstall (overinstall) Business Process Insight into the same location, this time using a database data directory name that contains only ASCII characters.

---

**Microsoft SQL Server 2005 Excessive Checkpoint Process I/O:** If you are using Microsoft SQL Server 2005 and you are aware that you are having problems with database checkpoint I/O requests, you are experiencing a known problem with SQL Server 2005. The problem has been fixed by Microsoft and has the following Microsoft defect number: **50000708**.

Microsoft provided a solution for this problem in their Service Pack 2 for SQL Server 2005. You need to make sure that you have installed Service Pack 2. Microsoft also recommends that you use the -k3 startup parameter to limit the I/O requests generated by the checkpoint process. Refer the defect text provided by Microsoft, or the Microsoft documentation for details of using startup parameters.

---

**InstallAnywhere Uninstaller Stops Responding:** Many errors encountered when the InstallAnywhere uninstaller is running, for example, a missing JVM, causes the uninstaller to stop responding, or hang.

If you experience a problem where the Business Process Insight uninstaller stops responding, you need to complete the following tasks according to what you have installed:

1. Stop the uninstaller process, which is still running on your system. For example, on a Windows system use the Task Manager.
2. If you are removing a Business Process Insight Server, delete the Business Process Insight

files under the Business Process Insight installation directory.

3. Modify the Zerog Global Registry (an InstallAnywhere file):

- Open the registry file, which is usually located in `c:\Program Files\Zero G Registry\.com.zerog.registry.xml`. Note that on Windows the registry file is located in a hidden directory, so you might have to configure your system to display hidden directories and files.

If the registry file contains only entries for the product that you are attempting to uninstall, you can rename the file. However, if there are multiple product installations, or multiple instances of one product installation, you need to edit the file as described in the following step.

If the registry file contains entries in addition to those for Business Process Insight, edit the file to remove the following entries:

- The product elements for Business Process Insight. Make sure the element references the directory where the files are located that you want to uninstall.
- The components elements for Business Process Insight. Make sure the component element references the directory where the files are located that you want to uninstall.

---

**Precision of Monitor Instance Values (QCCR1128156)**

**Description:** The processing and display of Business Process Insight monitor instance values is only done to a precision of 6 or 7 digits, and not to the precision of 15 digits used for process values. This can mean that large integer values may not show their exact value. For example, \$123,000,000 could show as \$123,000,064.

**Workaround:** None.

---

**Landing pages not displaying monitor values and statistics to double precision (QCCR1129319)**

**Description:** Business Process Insight Landing pages are not displaying monitor values and statistics to double precision.

**Workaround:** None.

---

**Instance pages fail (QCCR1130664)**

**Description:** Business Process Insight instance pages fail when first accessed in a multi-domain LWSSO configuration.

**Workaround:** Access the **Process Repository Explorer** under the Business Process Insight **Admin** area in Business Service Management (**Admin->Business Process Insight->Process Repository Explorer**). After doing this, the process instance pages can be accessed normally.

**Monitors with a type of Absolute Duration raise violations before an instance has completed. (QCCR1I131705)**

**Description:** Unlike other monitors, those with a type of Absolute Duration raise violations before an instance has completed. When there is a combination of a short absolute threshold duration and the event which completes the instance is constantly delayed, violations are incorrectly raised for every instance. For example, a combination of a critical threshold of 30 seconds and a latency of five minutes for the end events causes a violation.

**Workaround:** Disable the violation detection for instance duration monitors that have yet to complete. This is achieved by altering the relevant stored procedures (METRIC\_THRESH\_ACTIV\_INSTS\_OVER and METRIC\_THRESH\_ACTIVE\_OVERDUE) to not match on active instances:

- For MS SQL, this can be done by doing the following:
  - a. Run Microsoft SQL Server Management Studio (or equivalent).
  - b. Connect to the BPI Instance database (default is hbbpiscema).
  - c. Navigate to the Stored Procedures (for example, Programmability > Stored Procedures).
  - d. Select the stored procedure called METRIC\_THRESH\_ACTIV\_INSTS\_OVER.
  - e. Select Modify (or equivalent) to modify the stored procedure.
  - f. Replace Active with Never in the stored procedure.
  - g. Click Execute on the toolbar (or equivalent) to apply the change.
- For Oracle, this can be done by doing the following:
  - a. Run Oracle Enterprise Manager (or equivalent) and connect to the BPI Instance database.
  - b. Navigate to the Stored Procedures section (for example, Administration > Procedures) and display the list of stored procedures for the BPI schema.
  - c. Select the stored procedure called METRIC\_THRESH\_ACTIV\_INSTS\_OVER.
  - d. Select Edit (or equivalent) to modify the stored procedure.
  - e. Replace Active with Never in the stored procedure.
  - f. Click Apply (or equivalent) to apply the change.

**Note:** The caveat to the above workaround is that if there are process instances experiencing issues, the absolute duration violations will not be triggered until after the monitor scope for the process instances is complete. Therefore, the absolute duration violations may not be triggered if the active process instances are blocked on a particular Activity within the Business Monitor span and none complete the monitor scope. This workaround should only be used if the implications of this are acceptable.

---

**BPI does not support Oracle 11g RAC (QCCR1I133021)**

**Description:** BPI does not support Oracle 11g RAC.

**Workaround:** None.

---

**Business Process Diagram context menus intermittently shows JavaScript errors (QCCR1134412)**

**Description:** Context menus within Business Process Diagram intermittently show JavaScript errors.

**Workaround:** Close all open browsers and reopen the BSM user interface.

---

**Monitor Definer landing page does not show the data collected for the State group (QCCR1135230)**

**Description:** If a Business Process is deployed with a Group property (such as **Region**) and a Business Process Monitor is defined with a different Group property (such as **State**) then the Monitor Definer landing page will not show the data collected for the **State** group.

**Workaround:** Define the same Group property for both the Business Process and Business Process Monitor to see the group breakdown in the landing pages.

---

**List of monitors in the Business Health tab on the BPI Health page includes default non-grouped monitors (QCCR1135229)**

**Description:** On the **BPI Health** page, when you specify a non-default process grouping (other than **All**), the list in the **Business Health** tab at the bottom of the **BPI Health** page includes both the Business Process Monitors that match the grouping criteria and the Business Process Monitors that have no Process Definition Group Property specified.

**Workaround:** If you want to segregate all Business Process Monitors by groups, then designate a group value for each of the Business Process Monitors when you create or update the Business Process Monitors in the Monitor Definer.

---

**Deadline thresholds for Business Process monitors cannot be calculated (QCCR1138172/QCCR1138173)**

**Description:** Deadline thresholds for Business Process monitors cannot be calculated if the name of the deadline property has greater than ten characters and the BPI Instance Database is on an Oracle server.

An error can occur when calculating the deadline or status for deadline thresholds on Business Process monitors if the BPI Instance Database is on an Oracle server. This error appears in one of two ways:

- The value of the deadline is listed as **Deadline unavailable**, while the following warning message appears in the Monitor Engine log:

**WARNING: Monitor generation failed for... ORA-00972: identifier is too long: ...**

- The monitor status is listed as **No monitor information recorded for process instance**, while

the following warning message appears in the Monitor Engine log:

**WARNING: Monitor generation failed for... ORA-00904: ... invalid identifier...**

**Workaround:** Change the name of the deadline property to 10 or fewer characters.

---

### **Security warnings when launching the BPI Modeler (QCCR1138624)**

**Description:** When launching the BPI Modeler, you may see any of the following security warning messages:

- The application's digital signature cannot be verified.
- Part of the application is missing a digital signature. Only run if you trust the origin of the application.
- And after clicking on **More Information**, Although the application has a digital signature, the application's associated file (JNLP) does not have one.

**Workaround:** The messages can safely be ignored.

---

### **KPIs that contain multiple related Health Indicators are not shown in the Business Health tab in the Health page (QCCR1138672)**

**Description:** The Business Health tab in the Health page displays a gauge for all KPIs that have configured objectives. Any KPIs that contain multiple related Health Indicators, however, will not be displayed.

**Workaround:** Create a unique KPI for each Health Indicator.

---

### **Instance violation counts are always zero on the Health page (QCCR1139397)**

**Description:** The Business Health tab in the lower-right pane of the BPI Health page shows how many BPI monitor threshold violations there have been within the most recent sample period. The sample period corresponds to the period at which data samples are sent to BSM. If the sample period is too short, or the clocks are not synchronized between the database and BPI Server hosts, the violation counts may always be zero.

**Workaround:** If the violation counts on the BPI Health page remain zero when you expect there to be violations, check the following:

- Ensure the clocks are synchronized on the host systems for the database server, BPI server, and BSM.
  - Increase the Data samples send interval option on the HP Business Service Management settings page of the BPI Server Administration Console.
- 

### **Errors with long names for the BPI Instance database and user name (QCCR1141558)**

**Description:** When installing the BPI server on MSSQL (2008), multiple errors will occur if you have a large BPI Instance database name and large user name.

**Workaround:** Use up to a maximum of 16 characters for the BPI Instance database name and the user name.

---

**Errors may occur if a non-admin Oracle user attempts to install a BPI instance databasewith tablespace names that already exist in Oracle DB (QCCR1I42012)**

**Description:** When installing the BPI instance database on an Oracle database where pre-existing BPI tables exist (from a previous BPI installation where the Keep BPI data option was selected during the previous version uninstall), errors may occur if the database setup is conducted by a non-admin Oracle database user.

**Workaround:** When installing BPI against an Oracle database where legacy BPI database data has been retained from a previous installation, perform the BPI Instance database setup on the Oracle database as the Admin Oracle database user.

---

**When deleting a previously created Data definition in BPI Lite mode an error may occur (QCCR1I45844)**

**Description:** When using the Modeler in BPI Lite mode (BPI is not licensed or the BPI Server is not running), and you delete an existing Data definition that was created for a Business Process in BPI Full mode, an error may occur.

**Workaround:** Re-create a Business Process model with no Data definitions.

---

**Filter Validation Error in the Monitor Over Time report (QCCR1I47399)**

**Description:** In the Monitor Over Time report, a Filter Validation Error occurs if you did the following: 1) opened the Monitor Over Time report immediately before you created a monitor, 2) navigated directly to **BPI > Admin > Monitor Definer** and added a monitor, and 3) navigated back to BPI Applications through the application menu **Application > Business Process Insight**, which reopens the Monitor Over Time report and the Filter Validation error.

**Workaround:** If you go out of the Monitor Over Time report by navigating to another report, or to the site map, and then reopen the Monitor Over Time report, the error is resolved.

---

**Process Definition Name and the Data Definition Name cannot be identical (QCCR1I48053)**

**Description:** When creating a Business Process Model in the Modeler, the Process Definition Name and the Data Definition Name cannot be identical. Be sure that the Data Definition Name string is different from the Process Definition Name for all Business Processes.

**Workaround:** Change the Data Definition Name using the Modeler if necessary.

---

**BPI Value monitors show the completed process value instead of the value of the activities in the span (QCCR1I48691)**

**Description:** If you create a BPI Value monitor that spans multiple activities, and the value does not change from one activity to another, the monitor reports the value for the last activity in the span. However, in such cases where the value changes across activities, the monitor reports the value of the completed process even if the last activity that completes the process is not in the defined span.

**Workaround:** None.

---

**Error when using TV-BPI integration and the Decimal column type (QCCR1I50361)**

**Description:** When opening an event definition exported from the TV txn that has a data field of decimal type, an error occurs.

**Workaround:** When using TV-BPI integration, do not use the Decimal column type either when creating a data column in the UI or when creating XDM definitions by hand through XML. Use Double instead of Decimal.

---

**Selecting the PDF menu item in the Scorecard reports does not work for some Business Processes (QCCR1I56352)**

**Description:** Selecting the PDF menu item in the Scorecard reports does not work for some Business Processes and may display the error message: HTTP 500 error.

**Workaround:** None.

---

**Modeler occasionally fails to start with error "Unable to use remote proxied object" (QCCR1I60390)**

**Description:** Occasionally, when the BPI Modeler is launched, an error repeatedly appears that the Modeler cannot access the process repository. (QCCR1I60390)

**Workaround:** Follow these steps to resolve this issue if it persists. You must have BSM Administrator permissions.

1. Ensure the process repository service is up and running.
  - a. Launch the **HP Business Service Management Status** panel on the BSM host.
    - For Windows, access: **Start > All Programs > HP Business Service Management > Administration > HP Business Service Management Status**.
    - For Linux, access: `http://<BSM_FullyQualifiedHostName>:11021/invoke?operation=showServiceInfoAsHTML&objectname=Foundations:type%3DNannyManager`
  - b. After you launch the Status panel and log in, look for a **ServiceName** called **bpi\_process\_repos**.

- c. Verify that the **bpi\_process\_repos** Status is STARTED. If not, you may need to restart BSM.
  - d. If you have a full BPI installation with a licensed server, ensure that all the BPI components are running on the BPI Administration Console Status page.
2. Ensure your browser has the appropriate proxy configuration.

Access the Proxy settings dialog to see if the BSM domain has a proxy exception in the proxy exceptions list. For example, if your BSM server is called **bsm.hp.com**, then the proxy exception would be **\*.hp.com**. Internet Explorer calls these proxy **Exceptions**, and Firefox calls these **No Proxy for**. If there is no BSM domain proxy exception, and it is appropriate, add the BSM domain to the exceptions list.

Accessing the Proxy Settings panel varies depending on the type of browser and browser version you use to access BSM. Usually, the proxy settings can be configured from the browser tools or options panels in the network configuration or LAN settings under proxy servers.

3. Clear **javaws** cache.

Typically, the **bpimodeler.jnlp** file in **javaws** cache is updated when changes are detected, but by manually uninstalling the application from **javaws**, you ensure a fresh download of the **bpimodeler.jnlp** from the BSM server. On the system where you plan to launch the modeler, run **javaws -uninstall** in a command prompt.

4. Clear the browser cache of BSM cookies.

Your browser cache may contain a stale BSM cookie, which does not have the correct session ID and/or proper credential information. This can occur during unusual BSM shutdown scenarios where the Modeler was running at the time of the BSM shutdown.

Clearing the cache specifically for BSM is different depending on which browser you are using:

- Firefox Browser
  - i. Select the **Tools > Options > Privacy** tab.
  - ii. On the Privacy tab, click on the **remove individual cookies** link. A dialog opens with a list of cookie sites.
  - iii. Search through the sites for the hostname of your BSM host and select it.
  - iv. Click the **Remove Cookie** button at the bottom to remove the cookies associated with the BSM host site and close all Tools windows.

- Internet Explorer Browser

The following procedure ensures proper deletion of the targeted cookies, rather than using the Internet Explorer cookie removal tool, which may not always permit file deletions.

- i. Select the **Tools > Internet Options > General** tab.
- ii. Click the **Settings** button for deleting temporary files, history, cookies, and so on. A Settings dialog opens.
- iii. Click the **view files** button to view the cookies, which are opened in a Windows

Explorer window to your local Temporary Internet Files location.

- iv. Open a second Windows Explorer window.
- v. Copy and paste the Address line (for example, C:\<Local Settings>\Temporary Internet Files) from the original Windows Explorer window opened by the IE browser, to the second Windows Explorer window.

All the cache files are visible from this second window.

You can now delete any of the IE browser cache files from this second Windows Explorer window.

- vi. Search for and delete a pair of files called topaz/ (see the adjacent Internet Address column):
  - One file is associated with **Cookie:<user>@<bsmhost>/topaz/**.
  - One file is associated with **http://<bsmhost>/topaz/**.

## Application Management for SAP

### SiteScope SAP CCMS Alert monitor is not displayed (QCCR1I46581)

**Description:** The data received from the SiteScope SAP CCMS Alert monitor is not displayed in Service Health and Service Level Management SAP Systems views when working with Application Management for SAP application.

**Workaround:** None.

## Run-time Service Model (RTSM)

### Application and Modeling

Within RTSM administration, if you select multiple CIs and access menu commands, you will see the **Merge CIs** menu command disabled. This menu command is only relevant in stand-alone UCMDDB environments. It is disabled in BSM with RTSM because merging CIs can have adverse effects on related data and configurations.

---

When you access **Admin > RTSM > Modeling**, under certain circumstances RTSM Modeling pages are not loaded, and there are client-side exceptions in the Java Console. This can also occur when accessing **Admin > Service Health > View Builder**.

The solution is to clear the client Java CMDB cache: C:\Documents and Settings\<username>\Local Settings\Temp\UcmdbAppletJars

---

When creating a cron expression in the Job Definition Scheduler, the time and date must be in the future. If the current date or a past date is defined, it will cause an error.

---

When Delete permission is assigned for a CIT, all of its sub-classes can also be deleted.

---

When Create permission is assigned for a CIT, it can be updated and all of its sub-classes can also be created.

---

In Enrichment Manager, Impact Analysis Manager, and CIT Manager, when you select several CITs and their connecting relationships and select **Export Map to Image** with the **Selected Object Only** option, the resulting image does not display the relationship names.

---

It is possible to edit CITs even if they are assigned the READ\_ONLY\_CLASS qualifier.

---

The Screen Capture tool cannot capture a screen shot when the UCMDB/RTSM browser is running in a multi-display environment.

---

The **Clear Filter** button in the Job List dialog box (for scheduled reports and scheduled snapshots) does not work properly.

---

When creating a new Impact rule in the Impact Analysis Manager, the created Impact rule can be run within the IT Universe Manager even if the **UCMDB** check box on the Impact Rule Groups page of the wizard is not selected.

---

After restarting the server, it may not be possible to log in for several minutes even though the login page is available.

---

In IT Universe, if you right click a Virtual Compound Link from the Get Related pane, the Show Compound Path option is disabled.

---

The following API has been added to the CI Selector to get the selected CIs' display labels and class names using Javascript:

- String getSelectedCmdbObjectDisplayNames()
  - String getSelectedCmdbObjectClassNames()
-

## Release Notes

### Notes and Limitations

---

The new **retrieveAllActiveUsers()** method is now available in the **UCMDB-UI:name=UCMDB Integration** section of the JMX console. This is equivalent to the **getAllActiveUsers()** method that was available in UCMDB version 8.0x.

---

In the UCMDB\_JavaAPI, in cases where an attribute type was of type **string** or **integer** list, the **Attribute#getDefaultValue()** method, which had returned strings in XML format, now returns a collection of string or integer objects.

---

There have been some performance improvements in the Generic Database Adapter.

---

In the **Views** tab in the Security Manager, when Delete permission is set and a view is deleted, the query on which the view depends is also deleted.

---

It is not possible to import calculated relationships to the CI Type Manager from an XML file.

---

In the Modeling Studio, it is not possible to create more than one pattern-based model of the same CI type, based on the same query. When you try to create a new one, it overwrites the existing one.

---

Deprecated CI types do not appear in strike through font if the font size is less than 14 points.

---

In the Routing tab in the Layout Properties dialog box, (accessed by selecting Layout > Layout Properties), all the options seem to be available, but only some of them are actually used in the layout of the map.

---

In the Impact Analysis Manager, if an XML file is imported with the same file name as an existing Impact Rule, a confirmation message saying that an Impact Rule of that name already exists is not displayed before replacing the existing Impact rule.

---

When exporting CI instances found for a selected TQL, you can now manually enter up to 150,000 CIs per page.

---

If you have **Delete** permissions for views and you delete a view, the TQL query on which the view depends is also deleted.

---

In the Modeling Studio, no informative error message is displayed when you import an invalid XML file for views or queries.

---

In Modeling Studio, you cannot change the query type of an Enrichment or Impact Analysis query in the Query Definition Properties dialog box if there are resources that are defined on top of this query.

---

In the Impact Analysis manager, when you try to save an Impact rule for which you defined a sub-graph, a generic error message appears without giving detailed information regarding the problem.

---

Printing semi-transparent graphics using the **Run Screen Capture Tool** produces poor quality results.

---

In the Hierarchical tab in the Layout Properties dialog box, (accessed by selecting **Layout > Layout Properties**), the **Minimum Backward Edges** and **Optimize For Feedback Flow** options do not work properly.

---

The new viewing system currently does not support displaying view results via the IT Universe Manager that were based on a rule-based template.

---

When displaying CIT instances with the network port number property, the network port number is displayed with a comma. This comma is irrelevant but is displayed because of the manner in which Java reads the value from the system.

---

When you search for a string in the Modeling Studio or the Reports module, the Highlight button highlights only the first occurrence of the string that is found.

---

## Reports

To enable hyperlinks in reports, set the infrastructure setting **Enable links in exported reports** to **TRUE**. To display icons in exported reports, set the infrastructure setting **Display icons in exported reports** to **TRUE**.

## Confidential Manager

If you change the default domain name on the UCMDB server, you must first verify that the Data Flow Probe is not running. After the default domain name is applied, you must execute the **DataFlowProbe\tools\clearProbeData.bat** script on the Data Flow Probe side, and then restart the Data Flow Probe.

**Note:** Execution of the **clearProbeData.bat** script will cause a discovery cycle on the Probe side once the Probe is up.

## Discovery

**SQL Protocol:** The Encryption Method field enables you to choose SSL support for Oracle connections.

---

**SNMP Protocol:** The **Privacy Algorithm** now supports both DES and AES algorithms.

---

If you want to connect a new Data Flow Probe to UCMDB/RTSM with an identifier of a Data Flow Probe that is already defined on a different domain, you must remove the existing Probe from UCMDB/RTSM (from the Data Flow Probe Setup module), prior to installing the new Probe.

---

To prevent an overload on the Data Flow Probe machine, you can limit the number of remote processes that run simultaneously. Locate the **appilog.agent.local.services.maxRemoteProcesses** parameter in the **DiscoveryProbe.properties** file. The default value is unlimited (-1). Change the value to the maximum number of processes that can be run simultaneously. If you change this value, you must restart the Probe. (This overload can occur when activating certain out-of-the-box jobs that launch a Java process for each destination, for example, J2EE or SAP jobs.)

---

Downloaded **jar** file resources can cause the Probe to restart before all the other resources of an adapter package have downloaded. To prevent this occurring, the reset time is, by default, **40** minutes. You can change this time:

Access the **appilog.agent.probe.restartProbeAfterJarDownload.interval** parameter in the **DiscoveryProbe.properties** file. The delay until a restart on the first resource download (that is, for a first start or after clearing the Probe data) is 10 milliseconds.

---

In the Dependency Map, when selecting to show all instances of a selected CI, the instances are not displayed.

---

When you try to filter triggered CIs by probe in the Discovery Control Panel - Status pane, the triggered CIs are not filtered.

---

Discovery job error and warning messages are displayed in the language of your client's operating system, independent of browser language settings.

## Integration

If you are using data synchronization between BSM and the central CMDB (or vice versa) with aging enabled in the adapter, if you disable the sync for a time period which exceeds the aging interval, CIs may be deleted by the aging mechanism. As a result, related data and configurations in BSM may be lost as well.

**Workaround:** If you plan to stop data synchronization between BSM and the central CMDB for a time period which exceeds the aging interval, it is recommended to disable the aging in the adapter. If the aging has been enabled and is changed to be disabled, it is recommended to run full data synchronization before stopping the data synchronization between BSM and the central CMDB. (QCCR1H65590)

---

When running a history-based push job (for changes), you can incorrectly select any integration TQL query, even those that are federated or contain virtual links.

---

To simplify the creation of integration points, the following adapters are supplied with template configurations that include default options and queries: Service Manager, DDMi, and Microsoft SCCM/SMS. This is relevant for users of Content Pack 8.00 or later.

---

If you start a population job (for the first time) on a TQL query that is currently being edited, saving the query may remove its "Active" status and cause the job to fail. If this occurs, running a full population job again will fix the problem.

---

A population job that uses the UCMDB 9.x adapter to retrieve federated data can retrieve only added or updated CIs, but cannot remove deleted CIs from the CMDB.

---

The EMC Control Center (ECC) database does not contain WWN (World Wide Name) information for FCHBAs (Fiber Channel Host Bus Adapters) attached to Storage Arrays. Therefore, this discovery populates the WWN attribute of FCHBA CIs with the ECC ID (internal to ECC) of the HBA. The script also populates the **data\_note** attribute of each such FCHBA CI with a note that ECC does not have WWN info and duplication of this CI is possible.

## Federation

If you set a property condition on a query node that may bring data from external data sources (federation) and the condition is not supported by one of the data sources, the TQL query calculation will fail.

---

## Release Notes

### Notes and Limitations

---

When federation takes place to UCMDB through an intermediary server, the federation will fail if the CIT that is linked to the federated CIT is identified topologically, in part or in whole, by the federated CIT. For example, there may be a setup with three servers, where Server 1 is the local machine, which federates the IP CIT from Server 2, which in turn federates the same IP CIT from Server 3. When running the TQL query of node CIT linked to IP CIT, the query will fail, since a node CIT is identified by instances of IP CIT that are connected to it.

---

Federated nodes incorrectly show suggested values from the local CMDB, even when their only data sources are external.

---

If an integration point that supports a CIT that is being queried by the CI Selector in the IT Universe Manager, and this integration point does not support conditions on the display label, no results are shown.

## Discovery and Integration Content

Discovery and Integration Content Pack 8.00 was included with BSM 9.10. There is no need to install it separately. If you installed any later content packs, they will remain intact after installing BSM 9.13. Later Content Packs can be installed separately after 9.13 is installed. Before installing any other content pack version, verify that it is compatible with the current version of BSM (see the [UCMDB Content Pack Support matrix](#), the relevant Content Pack documentation, or check the SSO site for updated [support matrix information](#)).

**Note:** If you install Discovery and Integration Content Pack 10.00, you must also install the **CP 10 patch for BSM** on top of CP 10.00. This patch is available on the HP Software Support patches download site, accessed from the [HP Software Support](#) web site (<http://www.hp.com/go/hpssoftwaresupport>). Search for: **UCMDB 9.04 CP10 Patch** (file name **BAC\_00777.zip**).

---

### Content Pack Documentation Updates

To read the latest versions of the relevant documents, access the following URLs:

## RTSM Multilingual Support

Multi-Byte characters do not appear in titles and sub-titles in reports when exporting or previewing as PDF.

---

For reasons of compatibility, Integration Point names and Data Flow Management job names can include only English letters, numbers, and the underscore character (\_).

---

Because the maximum string length for many UCMDB parameters is defined and documented in bytes, the real acceptable value length is shorter when multi-byte or language-specific characters are used.

---

In Enrichment Manager, required attributes in the **Node Definition** dialog box are not marked in bold for the Japanese, Chinese, and Korean versions.

---

Non-English characters should not be used in paths to different properties or adapter files.

---

Multi-byte characters should not be used in user passwords.

---

The action names in scheduled jobs are stored with localized names (according to the locale being used), but those names are displayed with no dependence on locale. Those action names may be user-modified and therefore will be user-specific.

---

You can now configure email settings using multi-byte characters. These settings were moved to the Infrastructure Settings Manager.

---

Excel can now open UTF-8 encoded CSV documents correctly.

---

HP Universal CMDB/RTSM does not fully support surrogate pairs and combining characters.

---

## Documentation

- In the *Using MyBSM* guide (versions 9.10 and 9.12), there are various inaccuracies in the section **MyBSM Predefined Pages and Components**. Some pages and components are documented incorrectly; other components that are available in the MyBSM application are missing from the documentation. For a detailed description of these issues, see "Documentation Update - MyBSM Versions 9.10 and 9.12" on the HP Software Support [Manuals site](#).
- If you experience a JavaScript error when opening the HP Business Service Management Documentation Library online help system, disable the "Show Exception Dialog Box" in the Java

Console and open the help again.

- When viewing the HP Business Service Management Documentation Library online Help system in Internet Explorer 8 and later, numbered or alphabetical lists may appear corrupted.

**Workaround:** In IE 8 or 9, open **Tools > Compatibility View Settings**, and select **Display all web sites in Compatibility View**. Click **OK**. The incorrectly numbered lists appear correctly.

- The following information is missing from the Operations Management online help:

You can propagate and sum up the events along the CI impact hierarchy using the **Event KPI Group And Sibling Rule (OMi)** for the KPI **Unresolved Events** and **Unassigned Events**.

To configure this behavior, complete the following steps:

- a. Change the default group rule for the event based KPIs (unassigned, unresolved) to **Event KPI Group And Sibling Rule (OMi)**.
- b. Change the KPI Assignment Rule (**OMi KPI Assignments**) on CI Type **Configuration Item** to use the **Business Rule Event KPI Group and Sibling Rule (OMi)** (one change for each of the two KPIs in this assignment).
- c. Change the propagation rules on CI Type **Configuration Item (OMi Unassigned Event KPI Propagation** and **OMi Unresolved Event KPI Propagation**) to propagate the KPIs by using the **Event KPI Group And Sibling Rule (OMi)**.
- d. Go to the rule definition in the repositories UI and make the hidden rule parameters visible by selecting the check box to make the rule parameter configurable. Then, update the rule of the KPI in the KES assignment. After you save the assignment you can hide the rule parameters again.

Alternatively, you can delete the existing KPIs before running the KES assignment. This action will cause the assignment to create the KPIs rather than update them.

- e. Synchronize *all* CIs. (This may take some time, depending on the number of CIs.)
- The following information is missing from the Platform Administration online help section *HP Business Service Management Logs*:

You can enable flow tracing for a single event. This functionality makes it much simpler when viewing the flow trace log files: `opr-flowtrace-backend.log` and `opr-flowtrace-gateway.log`.

To enable tracing for a single event, set the custom attribute `__TRACE__` on the event. The custom attribute can have any value. The custom attribute triggers flow trace logs at the INFO level for the event.

The default event flow trace logging level is now set to INFO. (It was previously DEBUG.) Only events with the custom attribute `__TRACE__` will be logged to the flow trace log files. To enable flow tracing for all events, set the flow trace log level back to DEBUG.

- The online help does not mention the version of the Groovy run-time environment that BSM uses for Groovy scripts. BSM currently uses Groovy runtime environment 1.7.3.

# Multilingual Support

## BSM

ALM-EUM Integration - the ZIP archive is broken when the RUM application name contains non-English characters and archive was sent via email (QCCR1I71178)

---

French is not included in the installation UI for BSM, SiteScope, RUM (QCCR1I45161)

---

CI Statures from definitions "Changed from" and "Changed to" are displayed on BSM Server locale for OMi Event Console (QCCR1I53350)

---

Some parts of the OMi Content Pack items do not support MLU and are available only in the deployed language (BSM Server system locale) (QCCR1A123403)

---

OMi Performance Graphs > Graph Families are not localized (QCCR1A118712)

---

Find Matching Event window: meaningless characters in the IE 7 title bar in non-English language sessions (QCCR1A127305)

---

UI of SAM Monitor Performance page will be displayed on BSM server OS locale under any language session (QCCR1I15627)

---

BPM scripts must have only English characters in the name (QCCR1I38789)

---

Application > Service Health top pane tabs (Page Names) are not localized (QCCR1I45575)

---

To enable MLU support in Service Health Top View User specify Unicode font that will be used on Top View page in Infrastructure Settings Manager > Service Health Application > Top View Properties > "Top View Font Name".

---

To enable MLU support in PDF reports User should specify Unicode font in Infrastructure Settings Manager > Foundations > Reporting > “Unicode font path for displaying PDF characters” (QCCR1I21288)

---

The RTSM Class Model does not support multi-byte character sets. All class model items, including CI type, relationship, and attribute names, descriptions, and display labels, cannot contain multi-byte characters. (QCCR1I62755)

## RUM

RUM Probe installation UI is not localized (QCCR1I37569)

---

RUM Engine 'Transaction Management Configuration' page UI will be on JVM locale instead of browser one (QCCR1I57500)

## Diagnostics

Diagnostics - no support for non-English characters in Java and .NET Probes names (QCCR1I57918)

## SiteScope

Management reports by default do not support UTF-8 encoding. Workaround is to check International version check box in Preferences > General Preferences. (QCCR1I56586)

---

Run results for some monitors are shown according to the server locale or in English, instead of the client locale (QCCR1I30190)

---

Localized Service names are not readable while trying to add a Service monitor on WMI remote host. Workaround – use NetBios. (QCCR1I30808)

---

For SiteScope versions 11.10 or earlier integrated with OMi – CI names characters and alert names are not readable in OMi Event console. Workaround is to use same locale as SiS server OS in the entities' names (QCCR1I43630)

---

When using the Microsoft Windows Resources monitor in a non-English locale, the monitor counters and run status summary are not readable. Workaround: Configure the monitor to use the Direct registry queries collection method. (QCCR1I54985)

---

## Fixed Issues

Problems and limitations are identified with a Change Request number (QCCRxxxxxxx). Use this number when looking for more information about the problem on the [HP Software Support](http://www.hp.com/go/hpsoftwaresupport) web site (<http://www.hp.com/go/hpsoftwaresupport>), or when communicating with your HP Support representative.

To see the most updated status of limitations listed in this section, or generally to view a list of known problems for a specific product and/or version, on the [HP Software Support](http://www.hp.com/go/hpsoftwaresupport) web site click the Self-solve tab, select **Include related subproducts**, select product, version, and operating system, select only **Known Problems** in the **Document types** area, and click **Search**. You can also search for a specific CR using the keyword box at the top of the Self-solve page.

**Note:** BSM 9.13 includes all fixes delivered in BSM 9.12 Intermediate Patches.

To see the list of fixed CRs for a specific patch, on the [HP Software Support](http://www.hp.com/go/hpsoftwaresupport) web site (<http://www.hp.com/go/hpsoftwaresupport>), click the **Downloads** tab, click **Software Patches**, select product, version, and operating system, and click **Search**. Select the specific patch and review the Summary section on the patch download page for a short description of the fixed CRs. To get more details about a specific CR, click it in the SR section.

## Issues Fixed in this Release

**Warning message displayed during 9.12 installation (QCCR1I67741)**

---

**Add instructions to uninstall 9.12 SP on Linux (QCCR1I67954)**

---

**Deployment Guide - System Requirements - RHEL OS note should be clarified (QCCR1I68464)**

---

**After upgrade, unable to open scheduled reports (QCCR1I70205)**

---

**Cannot add Service Health Report as a component to Custom Report (QCCR1I66425)**

---

**Generic Data Engine does several SQL selects in parallel (QCCR1I70230)**

---

**During upgrade it is not clear what changes are being made in the master database (QCCR1I64213)**

---

**BUS does not recover after Gateway Server crashes (QCCR1I65682)**

---

**Missing step-by-step documentation for RTSM to CMS synchronization (QCCR1I68092)**

---

**Emails are delayed in CI alerts when using the trigger option "Status is equal to xx or xx for xx minutes" (QCCR1I68443)**

---

**Database Guide mentions OMi tablespace but this database is referred to in the application also using other names (QCCR1I68756)**

---

**Apostrophe character in "user name" should be forbidden or properly handled (QCCR1I70221)**

---

**Better documentation for BSM/SiteScope integration account requirements (QCCR1I70331)**

---

**Discovery jobs are restarted over and over again (QCCR1I70440)**

---

**Custom Query Builder: Filter options cause error if string field contains white space or special character (QCCR1I70681)**

---

**Parameters are different in VuGen and BSM (QCCR1I70511)**

---

**EUM Single Transaction Script text validation does not work (QCCR1I70837)**

---

**Topology reported by SiteScope for VMware Hypervisor not reconciled with CIs reported by Discovery Probe (QCCR1I69332)**

---

**Add option to SLM to calculate outlier samples as failed (same as EUM)(QCCR1I34606)**

---

**Calendar selection on SLA KPI is not updated (QCCR1I70196)**

---

---

**Locations from active filter not being filtered after selecting transaction (QCCR1I66688)**

---

**In SHA Anomaly Detection, anomalies are being merged automatically by location even though the root cause for the anomaly is not the location (QCCR1I71474)**

---

**SDR cannot report any data into BSM 9.12 due to Partition Manager fatal error (QCCR1I67896)**

---

**When navigating to RTSM Administration modules, Internet Explorer shows "cannot display web page" message (QCCR1I70912)**

---

**BSM upgrade 8.07 - 9.12 - RUM upgrader failed due to issue with next ID generation (QCCR1I65329)**

---

**Top View does not show the expand button for a CI even though there are lower level CIs (QCCR1I46578)**

---

**The Worst Status rule cannot be calculated when any of the KPIs or HIs have an invalid status, including PNR\_CRITICAL status (QCCR1I65483)**

---

**HttpClient should log the response before feeding it into the SAX parser (QCCR1A120231)**

---

**OMi 9.10 - EPI - an active script with a defined event filter gets executed even though events do not match the filter (QCCR1A136591)**

---

**OMi does not recognize instruction interfaces inside OM messages (QCCR1A136830)**

---

**ServiceManagerAdapter groovy script intermittently encounters NullPointerException during forwarding of event changes (QCCR1A136878)**

---

**Exponential event storm generated by internal OMi events in MOM scenarios (QCCR1A136904)**

---

---

**External Event Info tab in event browser does not inform user when target server is not reachable (QCCR1A137030)**

---

---

**Groovy scripting version should be aligned between OMi scripts and other parts of BSM (QCCR1A137211)**

---

---

**HIs are not properly impacted when message change events are sent from OM (QCCR1A137551)**

---

---

**BSM 9.12 - Entities missing because OMi CP missing (QCCR1A138251)**

---

---

**OMi does not submit correct counter states for the "Unassigned Events" KPI after a severity change (QCCR1A138303)**

---

---

**Events with an automatic action exceeding 255 characters in length are dropped by OMi (QCCR1A138312)**

---

---

**CI resolution fails if an empty host separator is configured (QCCR1A138874)**

---

---

**Events with an object or application field exceeding 255 characters in length are dropped by OMi (QCCR1A138904)**

---

---

**Within the OMi event pipeline, HIs are updated before deduplication takes place, causing duplicate events in BSM SH (QCCR1A139150)**

---

---

**OO integration: Link to report in event annotation is broken (QCCR1A139619)**

---

---

**RUM Probe - MQ protocol - Performance breakdown parameters do not exist for actions in MQ sessions (QCCR1I64597)**

---

---

**nCipher traffic is not supported by RUM (QCCR1I65063)**

---

**Large Scripts:** Large scripts (larger than 10 MB) cannot be uploaded to the database.

**Cross-Performance report was unable to generate reports for monitor and measurement names containing the open parenthesis "(" character (QCCR1I64407)**

---

**Drilldown to Dynamic Component Topology may result in a blank graph (QCCR1I63956)**

---

**BPM console is not translated to Chinese language (QCCR1I57916)**

---

**French is not included in the installation UI for BPM (QCCR1I45161)**

---

**For SiteScope 11.1x integrated with OMi – CI names characters and alert names are not readable in OMi Event console. Workaround is to use same locale as SiS server OS in the entities' names (QCCR1I43630)**

---

**RUM Probe names with non-English characters are not readable in EUM Admin (QCCR1I38959)**

---

## Previously Fixed Issues

**Add a configuration for alerts that will allow setting minimum transaction before triggering alert (QCCR1I52998)**

---

**No EUM ETL tables populated when same application is mapped to two different databases for BPM and RUM (QCCR1I62708)**

---

**Grant permissions for SLM to allow the aggregation button to not be grayed out without granting superuser access (QCCR1I33584)**

---

**User Report with Custom Query Builder (QCCR1I58563)**

---

**Selectors of large size are not read properly by matcher (QCCR1I62527)**

---

**Ampersand (&) character in email address recipient does not work (QCCR1I62331)**

---

---

**Exporting to CSV from a generated topology report with more than 33,000 rows creates an empty file (QCCR1I63554)**

---

**High availability documentation in BSM 9.01 Deployment Guide has inaccuracies (QCCR1I63664)**

---

**JMSUtils: Thread responsible for recover(reconnect) connections dies after ConcurrentModificationException (QCCR1I58867)**

---

**GDE PostProcessing engine is run twice if both internal and external processing is done (QCCR1I63127)**

---

**Failure to send CI status alert when defined on CI types Logical Application, Business Service and Business Process (QCCR1I58620)**

---

**Inconsistencies in Hardening Guide (QCCR1I63433)**

---

**BAC 8.06 Report Manager switches from 1 month to 21 hours in February (QCCR1I60230)**

---

**Not able to add contact information to the tooltip (QCCR1I37548)**

---

**Unable to access custom reports via URL (QCCR1I44968)**

---

**Excessive number of BLE Offline alerts, not finding the root cause (QCCR1I55184)**

---

**Add ability to remove recalculation tasks from UI (QCCR1I48846)**

---

**Alert engine sends duplicated notif\_stat\_t samples database (QCCR1I57049)**

---

**Scheduled Report in HTML format stored images (graphs, etc.) in the online directory for images, not the offline directory (QCCR1I59330)**

---

---

**Service Report does not take up entire space in PDF format (QCCR1I54859)**

---

**Reports publishing URLs with time frame parameters (QCCR1I52329)**

---

**Custom Reports do not use global time period in BAC 8.x (QCCR1I57995)**

---

**User Reports with large number of components should be properly generated (QCCR1I33307)**

---

**LDAP between 2 AD forests does not work (QCCR1I56314)**

---

**All email recipients are not listed in email alert (QCCR1I37981)**

---

**Need to see raw data in a scheduled Trend report (QCCR1I37066)**

---

**Using secure SMTP server (with user authentication) (QCCR1I54159)**

---

**Loading the CI Properties tab takes too much time for business application CI (QCCR1I60215)**

---

**Update a large number of alerts with one query (QCCR1I49018)**

---

**RUM should stop sending rum\_session\_id\_t sample by default (QCCR1I63369)**

---

**BSM LDAP/AD cannot fail over automatically to a backup LDAP/AD server (QCCR1I47611)**

---

**EUM Enrichment for BPM 8 samples - first sample for certain tx-loc pair is ignored (QCCR1I60941)**

---

**In SLA Wizard the page of HIs and KPIs is not loading (QCCR1I60973)**

---

**Data upgrade- wrong dependency check between the truncate task and the reaggregation task (QCCR1I61329)**

---

**KES Upgrade - missing selector in the KpiConfig of the 8.x assignment (QCCR1I61738)**

---

**Reports from Performance Matrix are showing periods instead of lines (QCCR1I62529)**

---

**BSM 9.10 Deployment Guide states that UAC has to be disabled in Windows 2008 in order to install the application. The UAC has to be disabled only for the installation, after that it can be enabled again. (QCCR1I63966)**

---

**British English support for the SQL Server language settings (QCCR1I65097)**

---

**Admin→RTSM fails to load when you bypass a load balancer or reverse proxy (QCCR1I61726)**

---

**Platform Admin Guide: Need to clarify LDAP user synchronization feature (QCCR1I30096)**

---

**Unable to increase the trend measurement beyond 20 for users (QCCR1I48642)**

---

**DBVerify/PM logs should show reason why PM catalog is invalid (QCCR1I50388)**

---

**Admin user is not able to access Service Health application but other superusers can (DB corruption - duplicated rows in Pages/Components tables) (QCCR1I51767)**

---

**Modeling Studio is not accessible by any user except superuser (QCCR1I51891)**

---

**Force BSM to use the FQDN as part of the email handshake (QCCR1I52009)**

---

**Menu customization lost when user cloned (QCCR1I52010)**

---

**BSM deployment questions (QCCR1I52016)**

---

---

**Scheduled Report shows error message tracking information (QCCR1I52173)**

---

---

**Require data to 3 decimal places in RUM Tier Summary Report (QCCR1I52176)**

---

---

**Increase the alert description character limit (QCCR1I52590)**

---

---

**Model explorer shows "UCMDB Service is currently unavailable. Please try again in a few minutes." (QCCR1I53194)**

---

---

**Custom Query Builder component does not save filters with '=' in MyBSM (QCCR1I54007)**

---

---

**Error in the description header of the file foundations\_sql\_dbobjects\_create.sql (QCCR1I54182)**

---

---

**vm\_params.ini values set too low for DBLoader, MercuryAS and others (QCCR1I55942)**

---

---

**RTSM WSDLs missing in BSM 9.0 and 9.01 (QCCR1I58019)**

---

---

**Resolve Locations by IP is taking 5 minutes for 100 IPs - RUM reporting all location CI as UNKNOWN (QCCR1I58171)**

---

---

**Hierarchy component are not displaying any information. (QCCR1I63031)**

---

---

**Health report in Service Catalog integration failed (QCCR1I62686)**

---

---

**MyBSM Workspace - Refresh is not working for application opened in a new window (QCCR1I39307)**

---

**Service Health Administration - Propagation assignment priorities are wrong (QCCR1I57021)**

---

**API needed for HI reset (QCCR1I47019)**

---

**Upgrading SLM KPI Propagation Rules (QCCR1I62752)**

**Need ability to set CI subcomponent attribute from submit event API (QCCR1A126679)**

---

**TopView is still shown although an event is deselected (QCCR1A126701)**

---

**Node CI is not removed from the root node group if it is moved to another node group (QCCR1A127259)**

---

**Cache timeout and size for ECA too small (QCCR1A127407)**

---

---

Database configuration wizard fails if you attempt to select an existing event database that does not exist (QCCR1A127443)

---

opr-checker.pl on Linux is not aware of the server type - some checks are only for DPS systems (QCCR1A127736)

---

Condition field in OMi event details is empty for events from IA that were triggered after some time (about 2 hours) of IA work (QCCR1A127789)

---

Dynamic topology synchronization from OM for UNIX creates all nodes with node role virtualised\_system (QCCR1A127836)

---

Linux: opr-sdTool.sh -uploadpackage <path> reports error : line 14: [: -uploadpackage: binary operator expected (QCCR1A127869)

---

opr-support-utils cannot list license information (QCCR1A127887)

---

Command line tool is needed to allow automatically fetching trusted CA certificate via network (QCCR1A128150)

---

PCoE: OMi owning status overwritten by connection user (QCCR1A128675)

---

CI resolver enrichment does not work as documented in OMi manual (QCCR1A128821)

---

Problem with CI Resolver enrichment rules (QCCR1A129040)

---

opr-checker should report installed OMi hotfixes (QCCR1A129189)

---

Upgrade from 9.01 to 9.10 might fail with timeouts (QCCR1A129417)

---

**Wrong ETI will be passed to Create Correlation Rule wizard for certain events (QCCR1A129431)**

---

**Specifying NOT in the event WS query does not negate the query (QCCR1A129541)**

---

**Event query language does not recognize the related\_ci[sub\_component] property for queries (QCCR1A129543)**

---

**Event WS does not recognize query parameter control\_transferred\_to[state]. (QCCR1A129545)**

---

**Event WS query is severely limited by length of URL (QCCR1A129716)**

---

**Event WS ignores BDM query language construct "IS NULL" (QCCR1A129717)**

---

**What.bat tool throws an error "Path not found" (QCCR1A129808)**

---

**Event WS returns error 500 when BTO query language "IN" operator is used (QCCR1A129898)**

---

**Need for validation tools for OMi event database (QCCR1A129906)**

---

**typemapping.xml needs to be adapted to map OSType values "n/a" and "n/a\_0" to the generic "Node" CI type (QCCR1A129939)**

---

**CI filtering on events does not work properly (QCCR1A130052)**

---

**opr-archive-events.bat does not create valid XML (QCCR1A130140)**

---

**When OMi not enabled, BSM cannot do northbound (Connected Server/Forwarding Rule) using sample logger groovy script (QCCR1A130230)**

---

**OMi ignores "Notify" flag sent by OM for UNIX and always syncs back changes on messages done in OMi (QCCR1A130350)**

---

**Event back synchronization to OMi for Remedy and xMatters applications fails (QCCR1A130360)**

---

**Parameters are not validated against acceptable parameter types when some UIs are accessed using URLs (QCCR1A130687)**

---

**No feedback to operator whenever event forwarding begins retrying delivery of events and updates to a target server (QCCR1A130753)**

---

**Content Manager cannot import newline/linefeed characters in attribute values (QCCR1A130769)**

---

**Topology synchronization must not truncate IP addresses into 'short hostnames' (QCCR1A130822)**

---

**When closing event received from OML, getting another event "Can't perform message operation 'own' for HPOM message" (QCCR1A132493)**

---

**Enterprise Collaboration integration ignores global CI and incident IDs (QCCR1A132815)**

---

**Ambiguous resolution: 2 matching CIs for clustered nodes (QCCR1A133636)**

---

**Toposync fail-safe mode does not work with UCMDB bulking mechanism (QCCR1A133820)**

---

**Event KPI calculator MBean reinit() method cannot be utilized to reset counter states (QCCR1A134211)**

---

**Group assignment not working as expected when users are placed into nested groups (QCCR1A134627)**

---

**Alert acknowledgement forwarding to OM only possible with "Notify and Update", which is unavailable without OMi license (QCCR1A134917)**

---

**OMi CI Filter doesn't work as expected when adding new group hierarchies (QCCR1A135976)**

---

**Event updates sent to OPR Event WS ignore the custom\_attribute\_list and annotation\_list contained in the event XML object (QCCR1A136065)**

---

**OM target connector licenses consumed without actual target connectors (QCCR1A136171)**

---

**Some nodes are missing when syncing more than 2000 nodes with agents from OM (QCCR1A136189)**

---

**OMi Tool Execution UI is not working properly after tool execution times out (QCCR1A136202)**

---

**Time zones specified in Event Web Service URL are half the value that they should be (QCCR1A136287)**

---

**Right click menu does not work correctly on expanded view (QCCR1A136574)**

---

**BSM 9.0 - SiteScope Event Integration - Certificate server should be enabled on Gateway machine (for distributed deployment) (QCCR1I45910)**

---

**Sonic crashes with OOM when opr\_gateway\_queue\_1 grows (QCCR1I47614)**

---

**Port collision when installing BSM and an OM agent on the same system (QCCR1I48115)**

---

**If processing server name has trailing or leading spaces certificate forwarding in distributed OM environments will not work (QCCR1I50831)**

---

**Event web service filter reverses operands on AND and OR expressions and ignores parentheses (QCCR1I56128)**

---

---

**A new created Page did not appear in the site map and in Application - Operations Management (QCCR1I56737)**

---

**Do not change the name of a transaction for a Single Transaction Script in the CI Properties page (QCCR1I58438)**

---

**Responsiveness of the active filters Location tab for End User Management reports (QCCR1I62118)**

---

**BPM and RUM data for an application is not visible in EUM reports. (QCCR1I61797)**

---

**EUM alert samples are not stored in the database. (QCCR1I61008)**

---

**Siebel Application documentation for BSM 9.01 is unavailable (QCCR1I53303)**

---

**System Health - Probes Channel Data Flow status not reported (QCCR1I42860)**

---

**RUM report should show the request without response captured by the tool (QCCR1I53143)**

---

**RUM action summary report drill down by End User does not list all the users in the report (QCCR1I52207)**

---

**RUM engine stopped processing data (QCCR1I57432)**

---

**Add ability to install RUM DB into subdirectory (QCCR1I40377)**

---

**In BPM order of input fields is not the same when creating a new instance vs. updating an existing instance (QCCR1I57283)**

---

**Unable to select multiple transactions in the Triage Raw Data Report filters (QCCR1I52690)**

---

**Popup in the End User Monitor reports should have ability to be hidden or removed (QCCR1I50520)**

---

**Enable RUM end users reports to display data end users group alphabetically (QCCR1I57392)**

---

**BSM Dashboard shows same end-user group with different data (QCCR1I53192)**

---

**Transaction name not getting displayed in the Triage Raw Data Report (QCCR1I52689)**

---

**Business Process Distribution report rounding values (QCCR1I44899)**

---

**When activating RUM application, there is no warning message from EUM Admin UI even though the license expired (QCCR1I50474)**

---

**Add housekeeping features to CRS (QCCR1I33925)**

---

**Click one button to turn off all monitoring on one host (QCCR1I37549)**

---

**Add possibility to define a page with an URL with more than 1000 characters (QCCR1I48320)**

---

**Add feature to import RUM pages/applications (QCCR1I53333)**

---

**Schedule created in BSM gets created differently in BPM (QCCR1I53019)**

---

**Automatic Monitor Configuration in EUM (QCCR1I47234)**

---

**Compatibility with Windows 7 (QCCR1I34676)**

---

**Compatibility with Windows 2008 and Windows 7 (QCCR1I52022)**

---

**PMi fails to graph data from the classic SiteScope Failover solution (QCCR1I60205)**

---

**Export command on reports and topologies is not supported (QCCR1I50730)**

---

**Issues with VMware when Transaction Management and Real User Monitor are used together (QCCR1I57087)**

---

**Null pointer exception Transaction Management Configuration tab (QCCR1I57484)**

---

**The option to use the TransactionVision Time Server in WebSphere MQ Communication Links for VMware environments is currently only supported by WebSphere MQ Agents (QCCR1I59208)**

**There are no longer major DPS machine performance issues. (QCCR1H35462)**

---

**The size of an attribute can now be decreased after increasing it. (QCCR1H33857)**

---

**After performing an upgrade from 9.01 to 9.02, the database version in the JMX is 9.02. (QCCR1H36083)**

---

**Advanced pane (visibility) menu of Direct Link and the info pane URL parameter are no longer inverted. (QCCR1H35198)**

---

**Change reports on newly added CIs now reads: "There are no changes in the selected CIs." (QCCR1H36195)**

---

**Different attributes cannot have the same display label. (QCCR1H32280)**

---

**The UCMDB client requests only JAR files that exist on the UCMDB server. (QCCR1H37214)**

---

**An Enrichment rule can now concatenate a blank space. (QCCR1H38073)**

---

---

**"Show CIT instances" for IPServiceEndpoint displays the column NetworkPortNumber without comma separated values. (QCCR1H39211)**

---

**When deleting a last link in TQL mode in the Enrichment Manager, the link is not removed and the following message is displayed: "Node or relationship in query is required". (QCCR1H27558)**

---

**CI attributes are displayed in alphabetical order when selecting the Create CI option from the ITU manager. (QCCR1H28359)**

---

**When a pattern based model is deleted, the corresponding scheduler job is also deleted. (QCCR1H35199)**

---

**TQL Queries can be opened under all conditions. (QCCR1H35033)**

---

**In IT Universe, if you right click a Virtual Compound Link from the Get Related pane, the Show Compound Path option is disabled. This will be enabled in a future version. (QCCR1H62436)**

---

**In the Asset Manager DB Adapter, the GDBA does not filter out properties with "null" values. (QCCR1H61655)**

---

**Java Integration adapters can be deleted after upgrading to 9.04. (QCCR1H62299)**

---

**Warning messages no longer appear and are not entered into the error log as a result of the DataContainer locating referenced objects with the same ID but a different type of Data In flow. (QCCR1H61790)**

---

**The problem of retrieving the network scope document encrypted with a non-default encryption key was resolved by exposing the importEncryptionKey method in Manager's JMX console. (QCCR1H33281)**

---

**The Scheduler definition for an interval repeat every x days no longer jumps to 1 week after reopening in Integration Studio. (QCCR1H36493)**

---

**Someone logged in with the Guest role cannot delete CIs or edit trigger TQLs. (QCCR1H29825)**

---

**The Hide Empty Folders button now hides only empty folders. (QCCR1H32053)**

---

**The Delete Candidate Reports can be generated even after deleting a CIT. (QCCR1H37197)**

---

**When trying to add a URL method to a CI type menu without entering a URL, a message appears telling the user to fill in the URL/Executable field. (QCCR1H37538)**

---

**Actual State output can be customized. (QCCR1H36411)**

---

**SMTP Server Mail setting is no longer ignored when a mail server is installed on the same machine as the UCMDB. (QCCR1H61363)**

---

**The Data Flow Probe Management Guide now specifies the correct location of the ucmdb\_licence.xml file. (QCCR1H61779)**

---

**In the Administration Guide, semi-colons have been removed from the chapter describing how to configure LDAP for Active Directory. (QCCR1H37362)**

---

**Authorization of a change in Configuration Manager now succeeds even with a Null Pointer Exception in UCMDB. (QCCR1H62586)**

---

**In the IT Universe, when viewing the central pane in text mode, Show CI instances no longer displays random values. (QCCR1H61648)**

---

**It is now possible to select the type CI Managed Object and perform a search in all objects. (QCCR1H61644)**

---

**Discovery Query triggers no longer fail due to a DB exception. (QCCR1H62487)**

---

**Pulling CIs from UCMDB 8.06 into 9.03 succeeds. (QCCR1H61628)**

---

**JMX Operation: exportFolderResources succeeds for UCMDB 9.x (QCCR1H61623)**

---

**The Java Web Service executeTopologyQueryByNameWithParameters can be successfully executed. (QCCR1H61898)**

---

**After upgrade to 9.03, TQLs with operator "IN" or "IN ignore case" are now working properly. (QCCR1H61925)**

---

**After upgrading to 9.03 from version 8.04, scheduler jobs (Administration & Scheduler) now appear in the UI and the scheduler is no longer broken. (QCCR1H62893)**

---

**Exporting report to CSV format no longer fills the empty cells with incorrect data. (QCCR1H32900)**

---

**Display name/description now appear correctly when navigating through CI-Type hierarchy. (QCCR1H32455)**

---

**The JVM used with RTSM in BSM no longer crashes. (QCCR1H39070)**

---

**There is now a working scroll bar for the probe list. (QCCR1H61383)**

---

**When installing the 9.03 CUP1 probe on a non-English Windows OS, the probe is able to download credentials from the UCMDB server. (QCCR1H37766)**

---

**Last access time no longer gets updated for decommissioned hosts. (QCCR1H38028)**

---

**Created a new JMX to correctly mark CP packages as factory. (QCCR1H38255)**

---

**Fixed problem when during deployment of new content packs all newly introduced packages were added as a user package. (QCCR1H38252)**

---

After upgrading from UCMDB 9.01 to 9.03, the server processing results of discovery is no longer extremely slow. (QCCR1H38668)

---

Unnecessary indexes on temporary tables were removed and no longer cause performance overhead when inserting and deleting. (QCCR1H38102)

---

There is no longer a significant degradation in DB-related operations while TQL calc and data insertion are running in parallel. (QCCR1H36737)

---

The "delete from &lt;temp table>" operation no longer has a high performance impact on an Oracle database. (QCCR1H26143)

---

Fixed issue of RTSM process (in BSM) running out of JVM memory. (QCCR1H37445)

---

During reconciliation, the Ignore Logic process no longer creates many CmdbModifiableObjects and does not throw a StackOverflowException. (QCCR1H37475)

---

Selecting the Show map option in Impact Analysis now opens a map. (QCCR1H37094)

---

Discovery job no longer gets stuck after performing an upgrade from UCMDB 9.02 to 9.03. (QCCR1H37234)

---

Embedded URLs for reports now work with LW-SSO enabled. (QCCR1H31812)

---

A Pattern Model can now be created with the same name as one that was previously deleted. (QCCR1H36725)

---

PDF reports in UCMDB version 9.0x can now be given a meaningful title. (QCCR1H30584)

---

Asset Manager Integration: Population job of 700K (CIs and links) no longer fails after 12 hours due to Out of Memory Exception (during getTopology stage). (QCCR1H34384)

---

Asset Manager: Jobs no longer fail because of a link with an end that was not part of that end's type table. (QCCR1H34514)

---

---

**Generic DB Adapter: Enum transformer now supports case insensitive values. (QCCR1H34223)**

---

**Generic DB Adapter: Discriminator now supports "all other values" and "like". (QCCR1H34582)**

---

**Generic DB Adapter: The ID chunk size was raised during the getTopology stage to improve performance. (QCCR1H34587)**

---

**Generic DB Adapter: The number of SQLs was reduced during the getTopology stage to improve performance. (QCCR1H34588)**

---

**Generic DB Adapter: When using Oracle with UTF-16 (source external DS for population) as the default charset, an Invalid Charset exception is no longer thrown. (QCCR1H35502)**

---

**Generic DB Adapter now filters cross ID conditions (treats 1.\* correctly). (QCCR1H35801)**

---

**Population: The createNextChunk is no longer very slow on large topologies with multiple connections. (QCCR1H35802)**

---

**Population: Anchor mapping flow was changed so it is now performed per chunk and not on entire topology. (QCCR1H35838)**

---

**Discovery jobs are no longer stuck in progress. (QCCR1H36186)**

---

**LDAP accounts now work with the UCMDB web service. (QCCR1H36233)**

---

**Users with no admin rights can no longer add relationships between CIs. (QCCR1H36258)**

---

**It is now possible to add for reports mail addresses with a hyphen in the domain. (QCCR1H36350)**

---

**Compare CIs Report now works with the Compare in CMDB option. (QCCR1H36405)**

---

**An exception no longer occurs when limiting credentials to a Probe. (QCCR1H36608)**

---

**After performing an upgrade from UCMDB 9.01 to 9.03, the Get Related CIs menu option is available. (QCCR1H36643)**

---

**After performing an upgrade from UCMDB 9.02 to 9.03, new users retain their assigned roles. (QCCR1H36735)**

---

**BSM is now able to populate SiteScope CIs on Dashboard (QCCR1H27221)**

---

**Fixed issue where the action of simultaneous touches by multiple DFM Probes places a high load on the UCMDB Server. Solution: configure the Discovery Probes to perform touches in non-overlapping time frames (QCCR1H28344)**

---

**Triggered CI: snmp@<CMDBID> invoked on the Discovery job Host Networking by SNMP now meets the discovery pattern input TQL conditions (QCCR1H28633)**

---

**Fixed problem of getting a Tanuki Java Service Wrapper license error in the eastern time zones from GMT +9 (QCCR1H29390)**

---

**Fixed problem of getting the error: "Connection to server has been lost" when it does not apply (QCCR1H29679)**

---

**Comparing CIs report now works correctly when CIs are in an "Updated Item" state (QCCR1H29915)**

---

**Parameterized views created in Modeling Studio now allow changes in the parameters when running the report based on the view (QCCR1H29869)**

---

**The encryption key location in the HP Universal CMDB Deployment Guide PDF for version 9.01 has been corrected (QCCR1H30570)**

---

**Scheduled change reports are now updating correctly (QCCR1H30571)**

---

---

The "VLAN Ports by SNMP" job now creates a task when required for the triggered CIs (QCCR1H30102)

---

UCMDB replication job scheduling is now working correctly when changing the language in Internet Explorer (QCCR1H30020)

---

Base TQL for Template Based View is now visible in Package Manager (QCCR1H30678)

---

Views with grouping by attributes using regular expressions are now working correctly (QCCR1H29441)

---

Templates have replaced parameterized views. Users with "view" privileges have rights to change the values for template results, but not to change the template itself (QCCR1H30738)

---

Fixed Application-signature GUI problem. Adding a new entry with a product name that exists in another entry now works correctly (QCCR1H30408)

---

Users can no longer click the email button if the SMTP server has not been set up (QCCR1H30242)

---

Fixed issue where the J2EE Websphere by Shell job has missing classes and attributes previously discovered with the JMX pattern (QCCR1H26843)

---

Fixed issue where Atrium integration does not create a link correctly in Remedy (QCCR1H27263)

---

Fixed issue where the TCP and Host to Host Dependencies discoveries (the Servers by Network Data and Potential Servers by Network Data jobs) do not discover an out-of-scope server (QCCR1H27828)

---

Fixed issue where the SAP Solution Manager Topology by SAP JCO job fails with an out of memory error (QCCR1H26408)

---

**Fixed issue where the ms\_exchange\_folder object has no required root\_container attribute (QCCR1H28215)**

---

**Fixed issue where the MS Cluster by NTCMD job fails on Windows 2008 servers (QCCR1H28405)**

---

**Fixed issue where the Collect Network Data by Netflow job does not take the listenDurationInMinutes parameter into account (QCCR1H28621)**

---

**Fixed issue where discovery of Microsoft Exchange 2007 throws a System32 Junction Point error with NTCMD (QCCR1H29479)**

---

**Fixed issue where a SQL cluster is not correctly mapped due to Reconciliation ignoring data (QCCR1H27688)**

---

**Fixed issue where Siebel CRM 8 is not discovered (QCCR1H28233)**

**EUM App – PCBD page Failed to retrieve data if URL contains French characters (QCCR1I58145)**

---

**EUM App - PCBD page: Multibyte characters of language different from browser language are corrupted in report (QCCR1I58151)**

---

---

# Documentation for New Features in This Service Pack

This section describes new product features available in this service pack, which are not documented in the BSM Documentation Library.

This section included:

- "Exporting End User Management Application Data for Application Lifecycle Management" below
- "BSM Logging Administrator Tool" on page 136

## Exporting End User Management Application Data for Application Lifecycle Management

You can export End User Management related data and monitoring tools configuration for a single application. The exported data includes information about the application's transactions and actions, traffic and load details, Real User Monitor (RUM) topology, and SiteScope monitors. Sharing such information between operations and development assists you in planning your scripts and load tests in Application Lifecycle Management (ALM), so that they better resemble your production environment.

You export the data for a specific application and for a selected time range. If the time range you select is greater than one hour, Business Service Management (BSM) calculates the busiest hour within the selected time range (based on the number of actions) and exports the data for that one hour period only. The data is exported to a number of different files, contained in a .zip file with the default name of <selected application name>\_<selected start date and time>\_<selected end date and time>.zip.

### To access

Select **Admin > Integrations > Application Lifecycle Management Integration**

## Learn More

This section also includes:

- "Prerequisites" below
- "Exported Files" on next page

Prerequisites

- ALM version 11.50 and above.

## Release Notes

### Documentation for New Features in This Service Pack

---

- Real User Monitor version 9.20 and above.
- SiteScope version 11.20 and above.
- The exported BSM configuration must not contain characters that are not supported by ALM.
- Traffic monitored by RUM must not contain characters that are not supported by ALM.

#### Exported Files

The following table describes the different files that are included in the .zip file:

File Name	Description	Path in Zip File
Business_Process_Distribution.pdf	Contains the Business Process Distribution report for the selected application and the busiest hour in the selected time frame. For details, see <a href="#">"RUM Business Process Distribution Report"</a> .	reports\data\
Location_Load_Analysis.pdf	Contains the Location Load Analysis report for the selected application and the busiest hour in the selected time frame. For details, see <a href="#">"RUM Location Load Analysis Report"</a> .	reports\data\
Typical_Transaction_Load.pdf	Contains the Typical Transaction Load report for the selected application for the entire selected time frame (that is, not just the busiest hour). For details, see <a href="#">"RUM Typical Transaction Load Report"</a> .	reports\data\
Business_Process_Distribution.csv	Contains a table of the data included in the Business Process Distribution report. For details, see <a href="#">"RUM Business Process Distribution Report"</a> .	reports\data\
Location_Load_Analysis.csv	Contains a table of the data included in the Location Load Analysis report. For details, see <a href="#">"RUM Location Load Analysis Report"</a> .	reports\data\
Typical_Transaction_Load.csv	Contains a table of the data included in the Typical Transaction Load report. For details, see <a href="#">"RUM Typical Transaction Load Report"</a> .	reports\data\
ActionsTrafficData.csv	Contains a table of data about the application's actions during the time frame.	traffic\data\
TransactionsTrafficData.csv	Contains a table of data about the application's transactions during the time frame.	traffic\data\
Applications.xml	An XML file with data about the configuration of the selected application (for example, URL, name, description, IDs, and so forth).	rum_conf\data\
Coverage.csv	Contains the number of total hits, total action hits, total transaction hits, and total sessions for the application in the time frame.	rum_conf\data\

File Name	Description	Path in Zip File
Pages.xml	An XML file with data about the configuration of the selected application's actions.	rum_conf\data\
Transactions.xml	An XML file with data about the configuration of the selected application's transactions (for example, the actions included in the transactions).	rum_conf\data\
Topology.xml	An XML file of the selected application's topology, such as associated nodes, running software, servers, and IP addresses.	cmdb\conf
<template_name_UUID>.bin	Contains the template binary data of the SiteScope monitors that monitor the selected application.	sis\mon\conf
<template_name_UUID>.xml	Contains the metadata of the exported SiteScope monitor templates.	sis\mon\conf
Manifest.xml	An XML file with data about the creation of the zip file and the files it contains.	zip root folder

## UI Description

### Application Lifecycle Management Integration Page

This page enables you to create and export a .zip file of application related data and monitoring tools configuration (such as actions, transactions, load, traffic, RUM topology, and SiteScope monitors) which you can use to help create realistic scripts and load tests in ALM, that emulate your production system.

To access the Application Lifecycle Management Integration page, select **Admin > Integrations > Application Lifecycle Management Integration** tab.

User interface elements are described below (unlabeled elements are shown in angle brackets>):

UI Element	Description
<b>View</b>	<p>Select the required time frame from the drop-down list. If you select the custom view, configure the From and To dates and times.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>If the selected time frame is not in the format of full (rounded) hours, BSM expands the time frame to the closest full hours. For example: <ul style="list-style-type: none"> <li>15:29-15:43 is expanded to 15:00-16:00</li> <li>15:40-16:20 is expanded to 15:00-17:00</li> </ul> </li> <li>If the time frame you select is greater than one hour, BSM calculates the</li> </ul>

UI Element	Description
	<p>busiest hour within the selected time frame (based on the number of actions) and exports the data for that one hour period only.</p> <ul style="list-style-type: none"> <li>If the selected application is monitored by SiteScope only (and not by RUM) and the selected time period is greater than one hour, SiteScope data for only the first hour of the selected time period is exported.</li> </ul>
<b>Applications</b>	<p>Select the application for which you want to export data.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>In the list of applications, only HTTP Web based applications and applications monitored by SiteScope are enabled for data export.</li> <li>You can only select a single application for data export.</li> </ul>
<b>Download zip file</b>	<p>Select this radio button to download the generated zip file. When the zip file is generated, you are prompted to open it, or download it to your client machine.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>You must not navigate away from this page until the zip file has been successfully generated and downloaded, otherwise the process is aborted.</li> <li>Once the zip file has been generated and downloaded, the status of the generation is displayed.</li> </ul>
<b>Send zip file by email</b>	<p>Select this radio button to send the generated zip file by email, and enter the email address to which you want to send the file.</p> <p><b>Note:</b> Email is sent using the SMTP server configured in BSM and may be limited. Ensure the address you enter is one that is accessible by the BSM SMTP server.</p>
<b>Generate</b>	<p>Click to generate and download or send the zip file.</p>

## BSM Logging Administrator Tool

This tool allows you to temporarily modify the level of details displayed in BSM logs, as well as create your own custom logs.

To open the BSM Logging Administrator Tool, open the following URL:

**<http://<BSM Gateway Server>/topaz/logAdminBsm.jsp>**

## Modifying Log Levels

Log levels determine the amount of details that are displayed in log files. Any changes made using this tool take place immediately upon selecting the level. They are reset to the default level if the

relevant process or machine is restarted.

**To modify log levels:**

1. Enter a string, or click Search in the Search for Loggers pane.
2. Select a process from the drop-down list to limit the filter the list of loggers by a process.
3. The loggers are displayed in a list at the bottom of the screen. You can modify the level of each logger.

## Creating Custom Log Files

You can create custom log files by using existing loggers.

**To create a custom log file:**

1. Select a process. The log can only contain data from one process.
2. Enter a file name for the log. The name should not include the path and should not include a file extension.
3. Select the loggers that you want to report to your log file by selecting the check boxes next to the relevant logger files in the **Add to file** column.
4. Click **Add Selected Loggers to File**. The log begins to receive data immediately.
